

INSURED INSTITUTION PERFORMANCE

- **Fourth Quarter Net Income of \$36.9 Billion Is \$2.9 Billion Less Than a Year Earlier**
- **Full-Year Earnings Fall \$1.7 Billion, to \$152.7 Billion**
- **Increased Litigation Expenses, Reduced Mortgage Revenues Cause Decline in Profits**
- **Quarterly Earnings at Community Banks Rise 28 Percent (see page 15)**
- **Pace of Loan Growth Picks Up**
- **“Problem List” Falls Below 300 for First Time Since 2008**

Quarterly ROA Falls Below 1 Percent for First Time in 2 Years

Strengthening loan growth helped lift revenues at most banks, but higher litigation expenses at a few large banks and lower noninterest income from sales, securitization, and servicing of residential mortgage loans caused the industry’s fourth-quarter net income to fall below the level of a year earlier. A majority of banks—61 percent—reported improved quarterly earnings, while the proportion of unprofitable institutions fell to 9.4 percent from 12.7 percent in fourth quarter 2013. However, fourth-quarter net income of \$36.9 billion was \$2.9 billion (7.3 percent) less than in fourth quarter 2013, as the four largest banks reported year-over-year declines in quarterly net income totaling \$4.1 billion. The average return on assets (ROA) fell to 0.96 percent from 1.09 percent the year before. This is the first time in two years that the average quarterly ROA has fallen below 1 percent.

Most Banks Report Increased Revenues

Net operating revenue—the sum of net interest income and total noninterest income—increased by \$923 million (0.6 percent) in the fourth quarter compared with fourth quarter 2013. Net interest income was \$1.1 billion (1 percent) higher, while total noninterest income was \$160 million (0.3 percent) lower. The increase in net interest income was attributable to growth in interest-bearing assets, which increased 6.2 percent in the 12 months ended December 31. Almost 71 percent of all banks reported higher net interest income than a year earlier. The average net interest margin in the fourth quarter was 3.12 percent, compared with 3.27 percent in fourth quarter 2013 and 3.15 percent in third quarter 2014. The decline in noninterest income was primarily the result of a \$1.6 billion (30.8 percent) drop in revenue from the sale, securitization, and servicing of residential mortgage loans. More than half of all banks (54.4 percent) reported higher noninterest income than the year-earlier quarter.

Chart 1

Chart 2

Loss Provisions Rise for a Second Consecutive Quarter

For a second consecutive quarter, the amount that banks set aside for loan-loss provisions was higher than a year earlier. Loan-loss provisions totaled \$8.2 billion in the fourth quarter, up \$878 million (12 percent) versus fourth quarter 2013. Noninterest expenses were \$4.9 billion (4.8 percent) higher, as itemized litigation expenses at a few of the largest banks were \$4.4 billion more than the year-earlier quarter.

Full-Year Earnings Post First Decline in Five Years

Full-year 2014 net income totaled \$152.7 billion, \$1.7 billion (1.1 percent) less than the industry earned in 2013. This is the first decline in annual net income in five years. The full-year ROA was 1.01 percent, marking the third year in a row that annual ROA exceeded 1 percent. Reduced revenues from mortgage sales, securitization, and servicing (down \$9.1 billion, or 35.1 percent), and increased litigation expenses (up \$6.5 billion) were the main contributors to the drop in full-year earnings. Almost two out of every three banks (64 percent) reported increased earnings in 2014, but 7 of the 10 largest banks reported lower earnings. Although more than two-thirds of all banks reported higher net operating revenue, the industry total was essentially unchanged from 2013, as net interest income rose by \$5.5 billion (1.3 percent), and noninterest income fell by \$5.5 billion (2.2 percent). This is the first time in four years that annual net interest income has increased. Full-year loan-loss provisions were \$2.7 billion (8.4 percent) lower in 2014. Noninterest expenses were \$5.2 billion (1.2 percent) higher, as the higher litigation expenses were offset in part by a \$3.5 billion (72.9 percent) reduction in goodwill impairment charges.

Net Charge-Off Rate Falls to an Eight-Year Low

Asset-quality indicators continued to improve in the fourth quarter, as net charge-offs (NCOs) posted a year-over-year decline for the 18th consecutive quarter. Fourth-quarter NCOs were \$2.2 billion (18.3 percent) lower than in fourth quarter 2013. The largest improvements were in retail loan categories. Residential mortgage loan NCOs fell by \$785 million (49.9 percent), while charge-offs of home equity lines of credit were \$446 million (39.1 percent) lower, and credit card NCOs were \$356 million (6.4 percent) less than in fourth quarter 2013. The average net charge-off rate in the fourth quarter fell to 0.48 percent, from 0.62 percent a year earlier. This is the lowest fourth quarter NCO rate since 2006.

Noncurrent Loan Rate Falls Below 2 Percent

The amount of loans that were noncurrent (90 days or more past due or in nonaccrual status) declined for the 19th quarter in a row. During the three months ended December 31, noncurrent loan balances fell by \$9.2 billion (5.4 percent). The biggest improvements occurred in real estate loan portfolios. Noncurrent residential mortgage balances fell by \$5.3 billion (4.9 percent) during the quarter, while noncurrent nonfarm nonresidential real estate loans declined by \$1.6 billion (9.4 percent), and noncurrent real estate construction and development loan balances declined by \$887 million (15.1 percent). The percentage of total loans and leases that were noncurrent fell from 2.11 percent to 1.96 percent during the quarter. This is the first time since the end of first quarter 2008 that the noncurrent rate has been below 2 percent.

Chart 3

Chart 4

The Industry Continues to Release Reserves

Insured institutions reduced their reserves for loan losses by \$2.6 billion (2.1 percent) in the fourth quarter, as net charge-offs of \$9.9 billion exceeded the \$8.2 billion that banks set aside in loan-loss provisions. This is the 19th consecutive quarter that the industry's loss reserves have declined. At the end of 2014, reserves totaled \$122.6 billion, the lowest since the end of first quarter 2008. The ratio of reserves to total loans and leases fell to 1.48 percent at year-end, a seven-year low. Despite the reduction in reserves, the industry's coverage ratio of reserves to noncurrent loans and leases improved for the ninth quarter in a row, rising from 72.9 percent to 75.4 percent. This is the highest level for the coverage ratio since third quarter 2008.

Retained Earnings Are More Than Double the Year-Ago Level

Equity capital increased by \$15.7 billion (0.9 percent) during the quarter. Retained earnings contributed \$13.9 billion to capital growth, more than twice the \$4.8 billion of a year earlier. Total risk-based capital rose by \$20.3 billion (1.3 percent). At the end of 2014, 98.6 percent of all insured institutions, representing 99.8 percent of industry assets, met or exceeded the requirements for the highest regulatory capital category, as defined for Prompt Corrective Action purposes.

12-Month Loan Growth Rate Rises Above 5 Percent

Total assets increased by \$204.4 billion (1.3 percent), as loan and lease balances rose by \$149.4 billion (1.8 percent), holdings of U.S. Treasury securities increased by \$59.9 billion (17.3 percent), and balances at Federal Reserve banks grew by \$58.6 billion

(4.4 percent). Loan growth was led by commercial and industrial (C&I) loans, which increased by \$42.2 billion (2.5 percent); credit cards, which posted a seasonal \$35.4 billion (5.2 percent) increase; nonfarm nonresidential real estate loans, which rose by \$16.7 billion (1.5 percent); and real estate construction and development loans, which grew by \$7.9 billion (3.4 percent). Loans to small businesses and farms increased by \$2.9 billion (0.4 percent), as small C&I loans rose by \$4.2 billion (1.4 percent). For the 12 months ended December 31, total loan and lease balances were up by 5.3 percent, the highest 12-month growth rate since mid-year 2008. Eighty percent of the increase in Treasury securities and 85 percent of the growth in Federal Reserve balances in the fourth quarter occurred at banks with assets greater than \$250 billion, which are subject to a new Liquidity Coverage Ratio rule.

Large Denomination Deposits Continue to Lead Growth in Liabilities

Deposits increased by \$167.3 billion (1.4 percent) in the fourth quarter, as balances in domestic offices rose by \$195.2 billion (1.9 percent), and deposits in foreign offices fell by \$27.9 billion (2 percent). Most of the growth in domestic deposits occurred in accounts with balances greater than \$250,000. Balances in these large denomination accounts increased by \$158.9 billion (3.1 percent), while balances in domestic accounts of less than \$250,000 rose by \$50.3 billion (1 percent). Time deposits posted their largest quarterly increase since third quarter 2008, rising by \$96.8 billion (6 percent). Nondeposit liabilities increased by \$22.5 billion (1.1 percent), as banks increased their Federal Home Loan Bank advances by \$21.1 billion (4.8 percent).

Chart 5

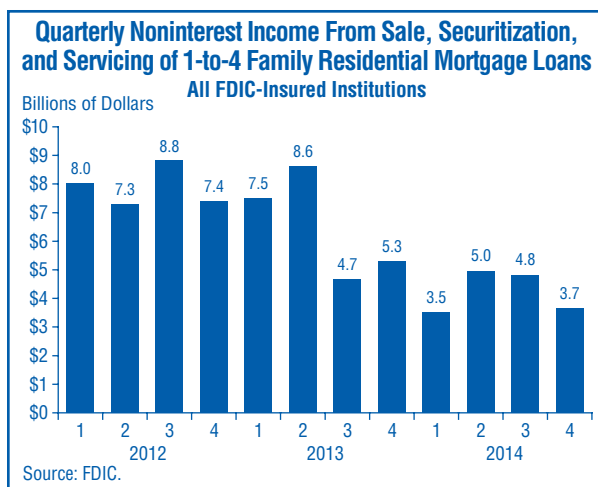

Chart 6

No New Charters Added in 2014

The number of FDIC-insured commercial banks and savings institutions reporting financial results fell to 6,509 at year-end, from 6,589 at the end of September, and 6,812 at the end of 2013. During the fourth quarter, mergers absorbed 75 institutions, while four insured institutions failed. For the full year, there were 274 institutions absorbed by mergers and 18 failures. This is the smallest number of bank failures in a year since 2007. In 2013, there were 24 failures. No new banks were chartered in 2014, marking the second time in the last three years that there have been no

new bank charters. There were 2,047,879 full-time equivalent employees reported at year-end 2014, down 761 from September 30, and down 20,840 from year-end 2013. The number of banks on the FDIC's "Problem List" declined from 329 to 291 during the fourth quarter, and total assets of "problem" banks fell from \$102 billion to \$87 billion. The "Problem List" is at its lowest level since year-end 2008.

GNMA properties	3,756.9	0.0	462.0	0.1	483.8	774.1	8.0	0.0	0.1	2,029.0

* Asset Concentration Group Definitions (Groups are hierarchical and mutually exclusive):

Credit-card Lenders - Institutions whose credit-card loans plus securitized receivables exceed 50 percent of total assets plus securitized receivables.

International Banks - Banks with assets greater than \$10 billion and more than 25 percent of total assets in foreign offices.

Agricultural Banks - Banks whose agricultural production loans plus real estate loans secured by farmland exceed 25 percent of the total loans and leases.

Commercial Lenders - Institutions whose commercial and industrial loans, plus real estate construction and development loans, plus loans secured by commercial real estate properties exceed 25 percent of total assets.

Mortgage Lenders - Institutions whose residential mortgage loans, plus mortgage-backed securities, exceed 50 percent of total assets.

Consumer Lenders - Institutions whose residential mortgage loans, plus credit-card loans, plus other loans to individuals, exceed 50 percent of total assets.

Other Specialized < \$1 Billion - Institutions with assets less than \$1 billion, whose loans and leases are less than 40 percent of total assets.

All Other < \$1 billion - Institutions with assets less than \$1 billion that do not meet any of the definitions above, they have significant lending activity with no identified asset concentrations.

All Other > \$1 billion - Institutions with assets greater than \$1 billion that do not meet any of the definitions above, they have significant lending activity with no identified asset concentrations.

** Noncurrent loan rates represent the percentage of loans in each category that are past due 90 days or more or that are in nonaccrual status.

COMMUNITY BANK PERFORMANCE

- **Net Income of \$4.8 Billion Increased 28 Percent From Fourth Quarter 2013**
- **Higher Net Operating Revenue and Lower Loan Loss Provisions Boosted Earnings**
- **Full-Year 2014 Net Income Increased From Higher Net Interest Income**
- **All Major Loan Balances Increased From the Previous Quarter and the Year Before**

Earnings Increased From Fourth Quarter 2013, Outpacing Industry

Community banks reported net income of \$4.8 billion in fourth quarter 2014, up \$1 billion (27.7 percent) from the year before.¹ Higher net operating revenue (the sum of net interest income and total noninterest income) and lower loan loss provisions lifted earnings for the 6,037 community banks. Despite the improved earnings at community banks, yearly earnings declined 7 percent for the banking industry. About 61 percent of community banks reported higher year-over-year earnings, while 9.7 percent were unprofitable during the quarter. The pretax return on assets was 1.18 percent, down 6 basis points from third quarter 2014, but up 21 basis points from fourth quarter 2013.²

¹ Prior-period dollar amounts used for comparisons are merger-adjusted, meaning the same institutions identified as community banks and the industry in the current quarter are used to determine dollar amounts in prior periods, after taking into account acquisitions. Performance ratios are not merger-adjusted.

² Pretax ROA is used for comparison because C corporations are taxed at the bank level, while S corporations pass tax obligations to their shareholders—58 percent of community banks were C corporations, while 35 percent were S corporations during the fourth quarter of 2014.

Net Interest Margin Widened 51 Basis Points Between Community Banks and Industry

Net interest income—which accounts for about 79 percent of net operating revenue at community banks—totaled \$17.2 billion during fourth quarter 2014, up \$1 billion (6.4 percent) from fourth quarter 2013. Community banks contributed more than half (56 percent) of the banking industry’s annual growth (up \$1.8 billion, or 1.7 percent) in net interest income. Close to 71 percent of community banks increased net interest income from the year-earlier quarter. The net interest margin (NIM) stood at 3.63 percent, down 2 basis points from fourth quarter 2013, as average asset yields fell more rapidly than the average funding costs. Community banks posted a NIM 51 basis points above the industry average—the largest gap since fourth quarter 2006. About 81 percent of community banks reported NIM above the industry’s average of 3.12 percent.

Chart 1

Chart 2

Noninterest Income Expanded 12.8 Percent From Fourth Quarter 2013

Noninterest income totaled \$4.6 billion in the fourth quarter 2014, up \$526 million (12.8 percent) from the 2013 quarter—outperforming the industry (up \$37.9 million, or 0.1 percent). More than half (54 percent) of community banks reported higher noninterest income than a year earlier. Close to 85 percent of the annual increase in noninterest income was contributed by all other noninterest income (up \$262.6 million, or 16.3 percent) and loan sale revenue (up \$182.9 million, or 26.3 percent).³

Noninterest Expense Increased From Fourth Quarter 2013

Noninterest expense of \$15.3 billion in fourth quarter 2014 increased \$458.2 million (3.1 percent) from the 2013 quarter. The annual increase was led by higher salary employee benefits (up \$505 million, or 6.5 percent). Almost two out of every three community banks (62 percent) reported higher noninterest expense from fourth quarter 2013. Full-time employees at community banks totaled 442,233 in fourth quarter 2014, up 5,371 (1.2 percent) from a year earlier. The

³ All other noninterest income includes items that are greater than \$25,000 and exceed 3 percent of all other noninterest income reported. They include income and fees from printing and sale of checks, earnings on increase in value of cash surrender value of life insurance, income and fees from automated teller machines, rent and other income from other real estate owned, safe deposit box rent, net change in the fair values of financial instruments accounted for under a fair value option, bank card and credit card interchange fees, and gains on bargain purchases.

average asset per employee was \$4.7 million in the most recent quarter, up from \$4.5 million in fourth quarter 2013.

Full-Year 2014 Earnings Increased 9.1 Percent to \$18.6 Billion

Full-year 2014 net income totaled \$18.6 billion, an increase of \$1.6 billion (9.1 percent) from 2013. Higher net interest income (up \$3.9 billion, or 6.2 percent) and lower loan-loss provisions (down \$658 million, or 20.8 percent) offset a decline in noninterest income (down \$329 million, or 1.8 percent) and an increase in noninterest expense (up \$1.6 billion, or 2.8 percent). Almost three out of every four community banks (74 percent) reported higher net interest income from 2013.

Close to 77 Percent of Community Banks Increased Loans From the Year Before

Loan balances at community banks totaled \$1.4 trillion during the fourth quarter, up \$33 billion (2.5 percent) from the third quarter 2014. With close to 70 percent of community banks increasing loans from the previous quarter, quarterly loan growth at community banks outperformed the banking industry (1.8 percent). All major loan categories increased from the previous quarter, led by nonfarm nonresidential loans (up \$7.7 billion, or 2 percent), commercial and industrial loans (up \$6.3 billion, or 3.4 percent), 1-to-4 family (up \$5.4 billion, or 1.5 percent), construction and development (up \$2.7 billion, or 3.3 percent), and agricultural production loans (up \$2.7 billion, or 5.9 percent). With more than a quarter (26 percent) of the annual industry

Chart 3

Chart 4

loan growth being contributed by community banks, loan balances for community banks grew \$108.1 billion (8.6 percent) from fourth quarter 2013. With a year-over-year growth of 8.6 percent, community banks outpaced the industry (5.3 percent). All major loan categories at community banks increased from the year earlier, with 42 percent of the yearly increase being driven by nonfarm nonresidential (up \$25.4 billion, or 6.8 percent) and 1-to-4 family (up \$19.8 billion, or 5.7 percent). Total unused commercial real estate (CRE) loan commitments—including construction and development—totaled \$66.6 billion during the fourth quarter 2014, an increase of \$2.3 billion (3.6 percent) from the previous quarter. Growth in unused CRE loan commitments indicates continued credit extension, as off-balance and on-balance CRE loans increased from third quarter 2014.

Small Loans to Businesses Increased From the Previous Quarter and the Year Before

Small loans to businesses—loans to commercial borrowers up to \$1 million, and farm loans up to \$500,000—at community banks totaled \$299.6 billion in fourth quarter 2014, up \$3.2 billion (1.1 percent) from third quarter 2014. All small loan categories increased, led by commercial and industrial loans (up \$1.8 billion, or 2 percent), agricultural production loans (up \$0.8 billion, or 2.8 percent), nonfarm nonresidential loans (up \$0.5 billion, or 0.3 percent), and farmland loans (up \$0.1 billion, or 0.4 percent). Close to 60 percent of community banks reported higher volume in small loans to business from fourth quarter 2013, resulting in an increase of \$10 billion (3.4 percent). More than half (52 percent) of the yearly increase in small loans to businesses at community banks was led by commercial and industrial loans (up \$5.1 billion, or 5.9 percent). Community banks continued to hold 45 percent of small loans to businesses.

Noncurrent Rate Continued to Decline

Community banks reported noncurrent loan balances of \$18.7 billion, down \$4.4 billion (19.1 percent) from fourth quarter 2013. Close to 61 percent of community banks lowered their noncurrent loan balances from the year before. The noncurrent rate stood at 1.36 percent in the most current quarter, a decline of 14 basis points from the previous quarter, and 43 basis points from the 2013 quarter. The noncurrent rate was down 60 basis points from the banking industry rate of 1.96 percent. Major loan categories had a decline in noncurrent rates from fourth quarter 2013, except for credit cards (up 5 basis points). Construction and development loans continued to have the highest noncurrent rate (2.64 percent), 55 basis points higher than the industry rate of 2.09 percent. However, the noncurrent rate for construction and development loans has declined for 17 consecutive quarters. The quarterly net charge-off rate was 0.25 percent, down 12 basis points from fourth quarter 2013, and it remained below the industry rate of 0.48 percent. Major loan categories had a decline in net charge-off rate from the year earlier, except for credit cards, which grew 87 basis points. Credit cards continued to have the highest net charge-off rate among the major loan categories (4.88 percent); however, this level is well below the 11.9 percent reported in fourth quarter 2008.

Four Community Banks Failed in the Fourth Quarter

The number of FDIC-insured community banks totaled 6,037 in fourth quarter 2014, down 70 banks from the previous quarter. Four community banks failed during the quarter.

** Noncurrent loan rates represent the percentage of loans in each category that are past due 90 days or more or that are in nonaccrual status.

INSURANCE FUND INDICATORS

- **Insured Deposits Grow by 1 Percent**
- **DIF Reserve Ratio Rises 13 Basis Points to 1.01 Percent**
- **Four Institutions Fail During Fourth Quarter**

Total assets of the 6,509 FDIC-insured institutions increased by 1.3 percent (\$204.4 billion) during the fourth quarter of 2014. Total deposits increased by 1.4 percent (\$167.3 billion), domestic office deposits increased by 1.9 percent (\$195.2 billion), and foreign office deposits decreased by 2 percent (\$27.9 billion). Domestic noninterest-bearing deposits increased by 1.7 percent (\$46.6 billion), savings deposits and interest-bearing checking accounts increased by 0.9 percent (\$51.8 billion), and domestic time deposits increased by 6 percent (\$96.8 billion). For the twelve months ending December 31, total domestic deposits grew by 5.9 percent (\$576.9 billion), with interest-bearing deposits increasing by 4.7 percent (\$336 billion) and noninterest-bearing deposits rising by 9.2 percent (\$240.9 billion).¹ Foreign deposits decreased by 0.4 percent, other borrowed money increased by 15.3 percent, while securities sold under agreements to repurchase declined by 9.3 percent over the same twelve-month period.² At the end of the fourth quarter, domestic deposits funded 66.7 percent of industry assets, the largest share since the fourth quarter of 1993, when the share was 67.9 percent.

Total estimated insured deposits increased by 1 percent in the quarter ending December 31, and by 3.2 percent for all of 2014.³ For institutions existing at the start and the end of the fourth quarter, insured deposits increased during the quarter at 3,752 institutions (58 percent), decreased at 2,735 institutions (42 percent), and remained unchanged at 31 institutions.

The condition of the Deposit Insurance Fund (DIF) continues to improve. The DIF increased by \$8.5 billion during the fourth quarter to \$62.8 billion. The main drivers of the increase were a negative provision for insurance losses of \$6.8 billion—reflecting a reduction in estimated losses from failed institution assets—and assessment income of \$2 billion. Interest revenue, combined with unrealized gains on available-for-sale securities and all other revenue (net of expenses) added another \$51 million. Fourth quarter operating expenses reduced the fund balance by \$408 million. For all of 2014, 18 insured institutions with combined assets of \$2.9 billion failed, down from 24 failures with combined assets of \$6 billion in 2013. The DIF's reserve ratio—the fund balance as a percent of estimated insured deposits—was 1.01 percent as of the fourth quarter, up from 0.88 percent in the prior quarter and 0.79 percent one year earlier.

Effective April 1, 2011, the deposit insurance assessment base changed to average consolidated total assets minus average tangible equity.⁴ Revisions to insurance assessment rates and risk-based pricing rules for large banks (banks with assets greater than \$10 billion) also became effective on that date.⁵ Table 1 shows the distribution of the assessment base by institution asset size category as of the fourth quarter.

¹ Throughout the insurance fund discussion, FDIC-insured institutions include insured commercial banks and savings associations and, except where noted, exclude insured branches of foreign banks.

² Other borrowed money includes FHLB advances, term federal funds, mortgage indebtedness, and other borrowings.

³ Figures for estimated insured deposits in this discussion include insured branches of foreign banks, in addition to insured commercial banks and savings institutions.

⁴ There is an additional adjustment to the assessment base for banker's banks and custodial banks, as permitted under Dodd-Frank.

⁵ The Fourth Quarter 2010 *Quarterly Banking Profile* includes a more detailed explanation of these changes.

Table 1

Distribution of the Assessment Base for FDIC-Insured Institutions* by Asset Size Data as of December 31, 2014				
Asset Size	Number of Institutions	Percent of Total Institutions	Assessment Base** (\$ Bil.)	Percent of Base
Less Than \$1 Billion	5,828	89.5	\$1,184.8	8.9
\$1 - \$10 Billion	574	8.8	1,398.9	10.5
\$10 - \$50 Billion	72	1.1	1,449.5	10.9
\$50 - \$100 Billion	12	0.2	819.2	6.2
Over \$100 Billion	23	0.4	8,433.4	63.5
Total	6,509	100.0	13,285.9	100.0

* Excludes insured U.S. branches of foreign banks.
 ** Average consolidated total assets minus average tangible equity, with adjustments for banker's banks and custodial banks.

Dodd-Frank requires that, for at least five years, the FDIC must make available to the public the reserve ratio and the Designated Reserve Ratio (DRR) using both estimated insured deposits and the new assessment base. As of December 31, 2014, the FDIC reserve ratio would have been 0.47 percent using the new assessment base (compared to 1.01 percent using estimated insured

deposits), and the 2 percent DRR using estimated insured deposits would have been 0.93 percent using the new assessment base.

NM - Not meaningful

** Beginning in the third quarter of 2009, estimates of insured deposits are based on a \$250,000 general coverage limit. The Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank) temporarily provided unlimited coverage for noninterest-bearing transaction accounts for two years beginning December 31, 2010, and ending December 31, 2012.

*** Total assets are based on final Call Reports submitted by failed institutions.

**** Assisted institutions represent eight institutions under a single holding company that received assistance in 2009.

greater than 35.00	4	0.06	8.3	0.06

* Beginning in the second quarter of 2011, the assessment base was changed to average consolidated total assets minus tangible equity, as required by the Dodd-Frank Act.

Notes to Users

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time.

Tables I-A through VIII-A.

The information presented in Tables I-A through V-A of the *FDIC Quarterly Banking Profile* is aggregated for all FDIC-insured institutions, both commercial banks and savings institutions. Tables VI-A (Derivatives) and VII-A (Servicing, Securitization, and Asset Sales Activities) aggregate information only for insured commercial banks and state-chartered savings banks that file quarterly *Call Reports*. Table VIII-A (Trust Services) aggregates Trust asset and income information collected annually from all FDIC-insured institutions. Some tables are arrayed by groups of FDIC-insured institutions based on predominant types of asset concentration, while other tables aggregate institutions by asset size and geographic region. Quarterly and full-year data are provided for selected indicators, including aggregate condition and income data, performance ratios, condition ratios, and structural changes, as well as past due, noncurrent, and charge-off information for loans outstanding and other assets.

Tables I-B through VI-B.

The information presented in Tables I-B through VI-B is aggregated for all FDIC-insured commercial banks and savings institutions meeting the criteria for community banks that were developed for the FDIC's *Community Banking Study*, published in December, 2012: <http://fdic.gov/regulations/resources/cbi/report/cbi-full.pdf>.

The determination of which insured institutions are considered community banks is based on five steps.

The first step in defining a community bank is to aggregate all charter-level data reported under each holding company into a single banking organization. This aggregation applies both to balance-sheet measures and the number and location of banking offices. Under the FDIC definition, if the banking organization is designated as a community bank, every charter reporting under that organization is also considered a community bank when working with data at the charter level.

The second step is to exclude any banking organization where more than 50 percent of total assets are held in certain specialty banking charters, including: *credit card specialists*, *consumer nonbank banks*, *industrial loan companies*, *trust companies*, *bankers' banks*, and banks holding 10 percent or more of total assets in foreign offices.

Once the specialty organizations are removed, the third step involves including organizations that engage in basic banking activities as measured by the total loans-to-assets ratio (greater than 33 percent) and the ratio of core deposits to assets (greater than 50 percent). Core deposits are defined as non-brokered deposits in domestic offices. Analysis of the underlying data shows that these thresholds establish meaningful levels of basic lending and deposit gathering and still allow for a degree of diversity in how individual banks construct their balance sheets.

The fourth step includes organizations that operate within a limited geographic scope. This limitation of scope is used as a proxy measure for a bank's relationship approach to banking. Banks that operate within a limited market area have more ease in managing relationships at a personal level. Under this step, four criteria are applied to each banking organization. They include both a minimum and maximum number of total banking offices, a maximum level of deposits for any one office, and location-based criteria. The limits on the number of and deposits per office are gradually adjusted upward over time. For banking offices, banks must have more than one office, and the maximum number of offices starts at 40 in 1985 and reaches 75 in 2010. The maximum level of deposits for any one office is \$1.25 billion in deposits in 1985 and \$5 billion in deposits in 2010. The remaining geographic limitations are also based on maximums for the number of states (fixed at 3) and large metropolitan areas (fixed at 2) in which the organization maintains offices. Branch office data are based on the most recent data from the annual June 30 *Summary of Deposits Survey* that are available at the time of publication.

Finally, the definition establishes an *asset-size limit*, also adjusted upward over time from \$250 million in 1985 to \$1 billion in 2010, below which the limits on banking activities and geographic scope are waived. This final step acknowledges the fact that most of those small banks that are not excluded as specialty banks meet the requirements for banking activities and geographic limits in any event.

Summary of FDIC Research Definition of Community Banking Organizations

Community banks are designated at the level of the banking. (All charters under designated holding companies are considered community banking charters.)

Exclude: Any organization with:

- No loans or no core deposits
- Foreign Assets \geq 10% of total assets
- More than 50% of assets in certain specialty banks, including:
 - credit card specialists
 - consumer nonbank banks¹
 - industrial loan companies
 - trust companies
 - bankers' banks

Include: All remaining banking organizations with:

- Total assets < indexed size threshold²
- Total assets \geq indexed size threshold, where:
 - Loan to assets > 33%
 - Core deposits to assets > 50%
 - More than 1 office but no more than the indexed maximum number of offices.³

¹ Consumer nonbank banks are financial institutions with limited charters that can make commercial loans or take deposits, but not both.

² Asset size threshold indexed to equal \$250 million in 1985 and \$1 billion in 2010.

³ Maximum number of offices indexed to equal 40 in 1985 and 75 in 2010.

- Number of large MSAs with offices ≤ 2
- Number of states with offices ≤ 3
- No single office with deposits $>$ indexed maximum branch deposit size.⁴

Tables I-C through IV-C.

A separate set of tables (Tables I-C through IV-C) provides comparative quarterly data related to the Deposit Insurance Fund (DIF), problem institutions, failed/assisted institutions, estimated FDIC-insured deposits, as well as assessment rate information. Depository institutions that are not insured by the FDIC through the DIF are not included in the *FDIC Quarterly Banking Profile*. U.S. branches of institutions headquartered in foreign countries and non-deposit trust companies are not included unless otherwise indicated. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charters.

DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) *Consolidated Reports of Condition and Income (Call Reports)* and the OTS *Thrift Financial Reports* submitted by all FDIC-insured depository institutions. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.) This information is stored on and retrieved from the FDIC's Research Information System (RIS) database.

COMPUTATION METHODOLOGY

Parent institutions are required to file consolidated reports, while their subsidiary financial institutions are still required to file separate reports. Data from subsidiary institution reports are included in the *Quarterly Banking Profile* tables, which can lead to double-counting. No adjustments are made for any double-counting of subsidiary data. Additionally, certain adjustments are made to the OTS *Thrift Financial Reports* to provide closer conformance with the reporting and accounting requirements of the FFIEC *Call Reports*. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.)

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any interim periods, divided by the total number of periods). For "pooling-of-interest" mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. For the community bank subgroup, growth rates will reflect changes over time in the number and identities of institutions designated as community banks, as well as changes in the assets and liabilities, and income and expenses of group members. Unless indicated otherwise, growth rates are not adjusted for mergers or other changes in the composition of the community bank subgroup.

⁴ Maximum branch deposit size indexed to equal \$1.25 billion in 1985 and \$5 billion in 2010.

All data are collected and presented based on the location of each reporting institution's main office. Reported data may include assets and liabilities located outside of the reporting institution's home state. In addition, institutions may relocate across state lines or change their charters, resulting in an inter-regional or inter-industry migration, e.g., institutions can move their home offices between regions, and savings institutions can convert to commercial banks or commercial banks may convert to savings institutions.

ACCOUNTING CHANGES

Private Company Accounting Alternatives, Including Accounting for Goodwill

On January 16, 2014, the FASB issued Accounting Standards Update (ASU) No. 2014-02, "Accounting for Goodwill." This ASU generally permits a private company to elect to amortize goodwill on a straight-line basis over a period of ten years (or less than ten years if more appropriate) and apply a simplified impairment model to goodwill. In addition, if a private company chooses to adopt the ASU's goodwill accounting alternative, the ASU requires the private company to make an accounting policy election to test goodwill for impairment at either the entity level or the reporting unit level. Goodwill must be tested for impairment when a triggering event occurs that indicates that the fair value of an entity (or a reporting unit) may be below its carrying amount. In contrast, existing U.S. GAAP does not permit goodwill to be amortized, instead requiring goodwill to be tested for impairment at the reporting unit level annually and between annual tests in certain circumstances. The ASU's goodwill accounting alternative, if elected by a private company, is effective prospectively for new goodwill recognized in annual periods beginning after December 15, 2014, and in interim periods within annual periods beginning after December 15, 2015. Goodwill existing as of the beginning of the period of adoption is to be amortized prospectively over ten years (or less than ten years if more appropriate). The ASU states that early application of the goodwill accounting alternative is permitted for any annual or interim period for which a private company's financial statements have not yet been made available for issuance.

A bank or savings association that meets the private company definition in ASU 2014-02 is permitted, but not required, to adopt this ASU for Call Report purposes and may choose to early adopt the ASU. For example, a calendar year private institution could begin to apply the provisions of ASU 2014-02 in its Call Report for September 30, 2014, in which case it would report nine months' amortization of goodwill existing as of January 1, 2014, and the amortization of any new goodwill recognized in the first nine months of 2014. Goodwill amortization expense should be reported unless the amortization is associated with a discontinued operation, in which case the goodwill amortization should be included within the results of discontinued as "Extraordinary items and other adjustments, net of income taxes."

For additional information on the private company accounting alternative for goodwill, institutions should refer to ASU 2014-02, which is available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Definitions of Private Company and Public Business Entity

According to ASU No. 2014-02, "Accounting for Goodwill," a private company is a business entity that is not a public

business entity. ASU No. 2013-12, "Definition of a Public Business Entity," which was issued in December 2013, added this term to the Master Glossary in the Accounting Standards Codification. This ASU states that a business entity, such as a bank or savings association, that meets any one of five criteria set forth in the ASU is a public business entity for reporting purposes under U.S. GAAP, including for Call Report purposes. An institution that is a public business entity is not permitted to apply the private company goodwill accounting alternative discussed in the preceding section when preparing its Call Report.

For additional information on the definition of a public business entity, institutions should refer to ASU 2013-12, which is available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Reporting Certain Government-Guaranteed Mortgage Loans Upon Foreclosure

In August 2014, the FASB issued Accounting Standards Update (ASU) No. 2014-14, "Classification of Certain Government-Guaranteed Mortgage Loans Upon Foreclosure," to address diversity in practice for how government-guaranteed mortgage loans are recorded upon foreclosure. The ASU updates guidance contained in ASC Subtopic 310-40, Receivables—Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, "Accounting by Debtors and Creditors for Troubled Debt Restructurings," as amended), because U.S. GAAP previously did not provide specific guidance on how to categorize or measure foreclosed mortgage loans that are government guaranteed.

This guidance is applicable to fully and partially government-guaranteed mortgage loans. Upon foreclosure, the separate other receivable should be measured based on the amount of the loan balance (principal and interest) expected to be recovered from the guarantor. This other receivable should be reported in "All other assets." Any interest income earned on the other receivable would be reported in "Other interest income." Other real estate owned would not be recognized by the institution.

For institutions that are public business entities, as defined under U.S. GAAP, ASU 2014-14 is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2014. For example, institutions with a calendar year fiscal year that are public business entities must apply the ASU in their Call Reports beginning March 31, 2015. However, institutions that are not public business entities (i.e., that are private companies) are not required to apply the guidance in ASU 2014-14 until annual periods ending after December 15, 2015, and interim periods beginning after December 15, 2015. Thus, institutions with a calendar year fiscal year that are private companies must apply the ASU in their December 31, 2015, and subsequent quarterly Call Reports. Earlier adoption of the guidance in ASU 2014-14 is permitted if the institution has already adopted the amendments in ASU No. 2014-04, "Reclassification of Residential Real Estate Collateralized Consumer Mortgage Loans Upon Foreclosure." Entities can elect to apply ASU 2014-14 on either a modified retrospective transition basis or a prospective transition basis. For additional information, institutions should refer to ASU 2014-14, which is available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Reclassification of Residential Real Estate Collateralized Consumer Mortgage Loans Upon Foreclosure

In January 2014, the FASB issued Accounting Standards Update (ASU) No. 2014-04, "Reclassification of Residential Real Estate Collateralized Consumer Mortgage Loans upon Foreclosure," to address diversity in practice for when certain loan receivables should be derecognized and the real estate collateral recognized. The ASU updated guidance contained in Accounting Standards Codification Subtopic 310-40, Receivables—Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, "Accounting by Debtors and Creditors for Troubled Debt Restructurings," as amended).

Under prior accounting guidance, all loan receivables were reclassified to other real estate owned (OREO) when the institution, as creditor, obtained physical possession of the property, regardless of whether formal foreclosure proceedings had taken place. The new ASU clarifies when a creditor is considered to have received physical possession (resulting from an in-substance repossession or foreclosure) of residential real estate collateralizing a consumer mortgage loan. Under the new guidance, physical possession for these residential real estate properties is considered to have occurred and a loan receivable would be reclassified to OREO only upon:

- The institution obtaining legal title upon completion of a foreclosure even if the borrower has redemption rights that provide the borrower with a legal right for a period of time after foreclosure to reclaim the property by paying certain amounts specified by law, or
- The completion of a deed in lieu of foreclosure or similar legal agreement under which the borrower conveys all interest in the residential real estate property to the institution to satisfy the loan.

Loans secured by real estate other than consumer mortgage loans collateralized by residential real estate should continue to be reclassified to OREO when the institution has received physical possession of a borrower's real estate, regardless of whether formal foreclosure proceedings take place.

For institutions that are public business entities, as defined under U.S. generally accepted accounting principles, ASU 2014-04 is effective for fiscal years, and interim periods within those fiscal years, beginning after December 15, 2014. For example, institutions with a calendar year fiscal year that are public business entities must apply the ASU in their Call Reports beginning March 31, 2015. However, institutions that are not public business entities are not required to apply the guidance in ASU 2014-04 until annual periods beginning after December 15, 2014, and interim periods within annual periods beginning after December 15, 2015. Thus, institutions with a calendar year fiscal year that are not public business entities must apply the ASU in their December 31, 2015, and subsequent quarterly Call Reports. Earlier adoption of the guidance in ASU 2014-04 is permitted. Entities can elect to apply the ASU on either a modified retrospective transition basis or a prospective transition basis. Applying the ASU on a prospective transition basis should be less complex for institutions than applying the ASU on a modified retrospective transition basis. Under the prospective transition method, an institution should apply the new guidance to all instances where it receives physical possession of residential real estate property collateralizing consumer mortgage loans that occur after the date of adoption of the ASU. Under the modified

retrospective transition method, an institution should apply a cumulative-effect adjustment to residential consumer mortgage loans and OREO existing as of the beginning of the annual period for which the ASU is effective. As a result of adopting the ASU on a modified retrospective basis, assets reclassified from OREO to loans should be measured at the carrying value of the real estate at the date of adoption while assets reclassified from loans to OREO should be measured at the lower of the net amount of the loan receivable or the OREO property's fair value less costs to sell at the time of adoption.

For additional information, institutions should refer to ASU 2014-04, which is available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

True-Up Liability Under an FDIC Loss-Sharing Agreement

An insured depository institution that acquires a failed insured institution may enter into a loss-sharing agreement with the FDIC under which the FDIC agrees to absorb a portion of the losses on a specified pool of the failed institution's assets during a specified time period. The acquiring institution typically records an indemnification asset representing its right to receive payments from the FDIC for losses during the specified time period on assets covered under the loss-sharing agreement.

Since 2009, most loss-sharing agreements have included a true-up provision that may require the acquiring institution to reimburse the FDIC if cumulative losses in the acquired loss-share portfolio are less than the amount of losses claimed by the institution throughout the loss-sharing period. Typically, a true-up liability may result because the recovery period on the loss-share assets (e.g., eight years) is longer than the period during which the FDIC agrees to reimburse the acquiring institution for losses on the loss-share portfolio (e.g., five years).

Consistent with U.S. GAAP and bank guidance for "Offsetting," institutions are permitted to offset assets and liabilities recognized in the Report of Condition when a "right of setoff" exists. Under ASC Subtopic 210-20, Balance Sheet—Offsetting (formerly FASB Interpretation No. 39, "Offsetting of Amounts Related to Certain Contracts"), in general, a right of setoff exists when a reporting institution and another party each owes the other determinable amounts, the reporting institution has the right to set off the amounts each party owes and also intends to set off, and the right of setoff is enforceable at law. Because the conditions for the existence of a right of offset in ASC Subtopic 210-20 normally would not be met with respect to an indemnification asset and a true-up liability under a loss-sharing agreement with the FDIC, this asset and liability should not be netted for Call Report purposes. Therefore, institutions should report the indemnification asset gross (i.e., without regard to any true-up liability) in Other Assets, and any true-up liability in Other Liabilities.

In addition, an institution should not continue to report assets covered by loss-sharing agreements after the expiration of the loss-sharing period even if the terms of the loss-sharing agreement require reimbursements from the institution to the FDIC for certain amounts during the recovery period.

Indemnification Assets and Accounting Standards Update No. 2012-06 – In October 2012, the FASB issued Accounting Standards Update (ASU) No. 2012-06, "Subsequent Accounting for an Indemnification Asset Recognized at the Acquisition Date as

a Result of a Government-Assisted Acquisition of a Financial Institution," to address the subsequent measurement of an indemnification asset recognized in an acquisition of a financial institution that includes an FDIC loss-sharing agreement. This ASU amends ASC Topic 805, Business Combinations (formerly FASB Statement No. 141 (revised 2007), "Business Combinations"), which includes guidance applicable to FDIC-assisted acquisitions of failed institutions.

Under the ASU, when an institution experiences a change in the cash flows expected to be collected on an FDIC loss-sharing indemnification asset because of a change in the cash flows expected to be collected on the assets covered by the loss-sharing agreement, the institution should account for the change in the measurement of the indemnification asset on the same basis as the change in the assets subject to indemnification. Any amortization of changes in the value of the indemnification asset should be limited to the lesser of the term of the indemnification agreement and the remaining life of the indemnified assets.

The ASU is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2012. For institutions with a calendar year fiscal year, the ASU takes effect January 1, 2013. Early adoption of the ASU is permitted. The ASU's provisions should be applied prospectively to any new indemnification assets acquired after the date of adoption and to indemnification assets existing as of the date of adoption arising from an FDIC-assisted acquisition of a financial institution. Institutions with indemnification assets arising from FDIC loss-sharing agreements are expected to adopt ASU 2012-06 for Call Report purposes in accordance with the effective date of this standard. For additional information, refer to ASU 2012-06, available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Goodwill Impairment Testing – In September 2011, the FASB issued Accounting Standards Update (ASU) No. 2011-08, "Testing Goodwill for Impairment," to address concerns about the cost and complexity of the existing goodwill impairment test in ASC Topic 350, Intangibles-Goodwill and Other (formerly FASB Statement No. 142, "Goodwill and Other Intangible Assets"). The ASU's amendments to ASC Topic 350 are effective for annual and interim goodwill impairment tests performed for fiscal years beginning after December 15, 2011 (i.e., for annual or interim tests performed on or after January 1, 2012, for institutions with a calendar year fiscal year). Early adoption of the ASU was permitted. Under ASU 2011-08, an institution has the option of first assessing qualitative factors to determine whether it is necessary to perform the two-step quantitative goodwill impairment test described in ASC Topic 350. If, after considering all relevant events and circumstances, an institution determines it is unlikely (that is, a likelihood of 50 percent or less) that the fair value of a reporting unit is less than its carrying amount (including goodwill), then the institution does not need to perform the two-step goodwill impairment test. If the institution instead concludes that the opposite is true (that is, it is likely that the fair value of a reporting unit is less than its carrying amount), then it is required to perform the first step and, if necessary, the second step of the two-step goodwill impairment test. Under ASU 2011-08, an institution may choose to bypass the qualitative assessment for any reporting unit in any period and proceed directly to performing the first step of the two-step goodwill impairment test.

Extended Net Operating Loss Carryback Period – The Worker, Homeownership, and Business Assistance Act of 2009, which was enacted on November 6, 2009, permits banks and other businesses, excluding those banking organizations that received capital from the U.S. Treasury under the Troubled Asset Relief Program, to elect a net operating loss carryback period of three, four, or five years instead of the usual carryback period of two years for any one tax year ending after December 31, 2007, and beginning before January 1, 2010. For calendar-year banks, this extended carryback period applies to either the 2008 or 2009 tax year. The amount of the net operating loss that can be carried back to the fifth carryback year is limited to 50 percent of the available taxable income for that fifth year, but this limit does not apply to other carryback years.

Under generally accepted accounting principles, banks may not record the effects of this tax change in their balance sheets and income statements for financial and regulatory reporting purposes until the period in which the law was enacted, i.e., the fourth quarter of 2009. Therefore, banks should recognize the effects of this fourth quarter 2009 tax law change on their current and deferred tax assets and liabilities, including valuation allowances for deferred tax assets, in their *Call Reports* for December 31, 2009. Banks should not amend their *Call Reports* for prior quarters for the effects of the extended net operating loss carryback period.

The American Recovery and Reinvestment Act of 2009, which was enacted on February 17, 2009, permits qualifying small businesses, including FDIC-insured institutions, to elect a net operating loss carryback period of three, four, or five years instead of the usual carryback period of two years for any tax year ending in 2008 or, at the small business's election, any tax year beginning in 2008. Under generally accepted accounting principles, institutions may not record the effect of this tax change in their balance sheets and income statements for financial and regulatory reporting purposes until the period in which the law was enacted, i.e., the first quarter of 2009.

Troubled Debt Restructurings and Current Market Interest Rates – Many institutions are restructuring or modifying the terms of loans to provide payment relief for those borrowers who have suffered deterioration in their financial condition. Such loan restructurings may include, but are not limited to, reductions in principal or accrued interest, reductions in interest rates, and extensions of the maturity date. Modifications may be executed at the original contractual interest rate on the loan, a current market interest rate, or a below-market interest rate. Many of these loan modifications meet the definition of a troubled debt restructuring (TDR).

The TDR accounting and reporting standards are set forth in ASC Subtopic 310-40, Receivables – Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, “Accounting by Debtors and Creditors for Troubled Debt Restructurings,” as amended). This guidance specifies that a restructuring of a debt constitutes a TDR if, at the date of restructuring, the creditor for economic or legal reasons related to a debtor’s financial difficulties grants a concession to the debtor that it would not otherwise consider.

In the *Call Report*, until a loan that is a TDR is paid in full or otherwise settled, sold, or charged off, it must be reported in the appropriate loan category, as well as identified as a per-

forming TDR loan, if it is in compliance with its modified terms. If a TDR is not in compliance with its modified terms, it is reported as a past-due and nonaccrual loan in the appropriate loan category, as well as distinguished from other past due and nonaccrual loans. To be considered in compliance with its modified terms, a loan that is a TDR must not be in nonaccrual status and must be current or less than 30 days past due on its contractual principal and interest payments under the modified repayment terms. A loan restructured in a TDR is an impaired loan. Thus, all TDRs must be measured for impairment in accordance with ASC Subtopic 310-10, Receivables – Overall (formerly FASB Statement No. 114, “Accounting by Creditors for Impairment of a Loan,” as amended), and the *Call Report Glossary* entry for “Loan Impairment.” Consistent with ASC Subtopic 310-10, TDRs may be aggregated and measured for impairment with other impaired loans that share common risk characteristics by using historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate. The outcome of such an aggregation approach must be consistent with the impairment measurement methods prescribed in ASC Subtopic 310-10 and *Call Report* instructions for loans that are “individually” considered impaired instead of the measurement method prescribed in ASC Subtopic 450-20, Contingencies – Loss Contingencies (formerly FASB Statement No. 5, “Accounting for Contingencies”) for loans not individually considered impaired that are collectively evaluated for impairment. When a loan not previously considered individually impaired is restructured and determined to be a TDR, absent a partial charge-off, it generally is not appropriate for the impairment estimate on the loan to decline as a result of the change from the impairment measurement method prescribed in ASC Subtopic 450-20 to the methods prescribed in ASC Subtopic 310-10.

Troubled Debt Restructurings and Accounting Standards Update No. 2011-02 – In April 2011, the FASB issued Accounting Standards Update (ASU) No. 2011-02, “A Creditor’s Determination of Whether a Restructuring Is a Troubled Debt Restructuring,” to provide additional guidance to help creditors determine whether a concession has been granted to a borrower and whether a borrower is experiencing financial difficulties. The guidance is also intended to reduce diversity in practice in identifying and reporting TDRs. This ASU was effective for public companies for interim and annual periods beginning on or after June 15, 2011, and should have been applied retrospectively to the beginning of the annual period of adoption for purposes of identifying TDRs. The measurement of impairment for any newly identified TDRs resulting from retrospective application should have been applied prospectively in the first interim or annual period beginning on or after June 15, 2011. (For most public institutions, the ASU takes effect July 1, 2011, but retrospective application begins as of January 1, 2011.) Nonpublic companies should apply the new guidance for annual periods ending after December 15, 2012, including interim periods within those annual periods. (For most nonpublic institutions, the ASU took effect January 1, 2012.) Early adoption of the ASU was permitted for both public and nonpublic entities. Nonpublic entities that adopt early are subject to a retrospective identification requirement. For additional information, refer to ASU 2011-02, available at <http://www.fasb.org/jsp/FASB/Page/SectionPage&cid=1176156316498>.

Accounting for Loan Participations – Amended ASC Topic 860 (formerly FAS 166) modified the criteria that must be met in order for a transfer of a portion of a financial asset, such as a loan participation, to qualify for sale accounting. These changes apply to transfers of loan participations on or after the effective date of amended ASC Topic 860 (January 1, 2010, for banks with calendar year fiscal year), including advances under lines of credit that are transferred on or after the effective date of amended ASC Topic 860 even if the line of credit agreements were entered into before this effective date. Therefore, banks with a calendar-year fiscal year must account for transfers of loan participations on or after January 1, 2010, in accordance with amended ASC Topic 860. In general, loan participations transferred before the effective date of amended ASC Topic 860 are not affected by this new accounting standard.

Under amended ASC Topic 860, if a transfer of a portion of an entire financial asset meets the definition of a “participating interest,” then the transferor (normally the lead lender) must evaluate whether the transfer meets all of the conditions in this accounting standard to qualify for sale accounting.

Other-Than-Temporary Impairment – When the fair value of an investment in an individual available-for-sale or held-to-maturity security is less than its cost basis, the impairment is either temporary or other-than-temporary. The amount of the total other-than-temporary impairment related to credit loss must be recognized in earnings, but the amount of total impairment related to other factors must be recognized in other comprehensive income, net of applicable taxes. To determine whether the impairment is other-than-temporary, an institution must apply the applicable accounting guidance – refer to previously published *Quarterly Banking Profile* notes: <http://www2.fdic.gov/qbp/2011mar/qbpnot.html>.

ASC Topics 860 & 810 (formerly FASB Statements 166 & 167) – In June 2009, the FASB issued Statement No. 166, Accounting for Transfers of Financial Assets (FAS 166), and Statement No. 167, Amendments to FASB Interpretation No. 46(R) (FAS 167), which change the way entities account for securitizations and special purpose entities. FAS 166 revised FASB Statement No. 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, by eliminating the concept of a “qualifying special-purpose entity,” creating the concept of a “participating interest,” changing the requirements for derecognizing financial assets, and requiring additional disclosures. FAS 167 revised FASB Interpretation No. 46(R), Consolidation of Variable Interest Entities, by changing how a bank or other company determines when an entity that is insufficiently capitalized or is not controlled through voting or similar rights, i.e., a “variable interest entity” (VIE), should be consolidated. Under FAS 167, a bank must perform a qualitative assessment to determine whether its variable interest or interests give it a controlling financial interest in a VIE. If a bank’s variable interest or interests provide it with the power to direct the most significant activities of the VIE, and the right to receive benefits or the obligation to absorb losses that could potentially be significant to the VIE, the bank is the primary beneficiary of, and therefore must consolidate, the VIE.

Both FAS 166 and FAS 167 take effect as of the beginning of each bank’s first annual reporting period that begins after November 15, 2009, for interim periods therein, and for

interim and annual reporting periods thereafter (i.e., as of January 1, 2010, for banks with a calendar year fiscal year). Earlier application is prohibited. Banks are expected to adopt FAS 166 and FAS 167 for Call Report purposes in accordance with the effective date of these two standards. Also, FAS 166 has modified the criteria that must be met in order for a transfer of a portion of a financial asset, such as a loan participation, to qualify for sale accounting. These changes apply to transfers of loan participations on or after the effective date of FAS 166. Therefore, banks with a calendar year fiscal year must account for transfers of loan participations on or after January 1, 2010, in accordance with FAS 166. In general, loan participations transferred before the effective date of FAS 166 (January 1, 2010, for calendar year banks) are not affected by this new accounting standard and pre-FAS 166 participations that were properly accounted for as sales under FASB Statement No. 140 will continue to be reported as having been sold.

Accounting Standards Codification – refer to previously published *Quarterly Banking Profile* notes: <http://www2.fdic.gov/qbp/2011sep/qbpnot.html>.

DEFINITIONS (in alphabetical order)

All other assets – total cash, balances due from depository institutions, premises, fixed assets, direct investments in real estate, investment in unconsolidated subsidiaries, customers’ liability on acceptances outstanding, assets held in trading accounts, federal funds sold, securities purchased with agreements to resell, fair market value of derivatives, prepaid deposit insurance assessments, and other assets.

All other liabilities – bank’s liability on acceptances, limited-life preferred stock, allowance for estimated off-balance-sheet credit losses, fair market value of derivatives, and other liabilities.

Assessment base – effective April 1, 2011, the deposit insurance assessment base has changed to “average consolidated total assets minus average tangible equity” with an additional adjustment to the assessment base for banker’s banks and custodial banks, as permitted under Dodd-Frank. Previously the assessment base was “assessable deposits” and consisted of DIF deposits (deposits insured by the FDIC Deposit Insurance Fund) in banks’ domestic offices with certain adjustments.

Assets securitized and sold – total outstanding principal balance of assets securitized and sold with servicing retained or other seller-provided credit enhancements.

Capital Purchase Program (CPP) – as announced in October 2008 under the TARP, the Treasury Department purchase of noncumulative perpetual preferred stock and related warrants that is treated as Tier 1 capital for regulatory capital purposes is included in “Total equity capital.” Such warrants to purchase common stock or noncumulative preferred stock issued by publicly-traded banks are reflected as well in “Surplus.” Warrants to purchase common stock or noncumulative preferred stock of not-publicly-traded bank stock are classified in a bank’s balance sheet as “Other liabilities.”

Construction and development loans – includes loans for all property types under construction, as well as loans for land acquisition and development.

Core capital – common equity capital plus noncumulative perpetual preferred stock plus minority interest in consolidated subsidiaries, less goodwill and other ineligible intangible

assets. The amount of eligible intangibles (including servicing rights) included in core capital is limited in accordance with supervisory capital regulations.

Cost of funding earning assets – total interest expense paid on deposits and other borrowed money as a percentage of average earning assets.

Credit enhancements – techniques whereby a company attempts to reduce the credit risk of its obligations. Credit enhancement may be provided by a third party (external credit enhancement) or by the originator (internal credit enhancement), and more than one type of enhancement may be associated with a given issuance.

Deposit Insurance Fund (DIF) – the Bank (BIF) and Savings Association (SAIF) Insurance Funds were merged in 2006 by the Federal Deposit Insurance Reform Act to form the DIF.

Derivatives notional amount – the notional, or contractual, amounts of derivatives represent the level of involvement in the types of derivatives transactions and are not a quantification of market risk or credit risk. Notional amounts represent the amounts used to calculate contractual cash flows to be exchanged.

Derivatives credit equivalent amount – the fair value of the derivative plus an additional amount for potential future credit exposure based on the notional amount, the remaining maturity and type of the contract.

Derivatives transaction types:

Futures and forward contracts – contracts in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of an underlying variable or index at a specified price or yield. These contracts exist for a variety of variables or indices, (traditional agricultural or physical commodities, as well as currencies and interest rates). Futures contracts are standardized and are traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms and are traded over the counter.

Option contracts – contracts in which the buyer acquires the right to buy from or sell to another party some specified amount of an underlying variable or index at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the variable or index at the discretion of the buyer of the contract.

Swaps – obligations between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity (notional principal) of the underlying variable or index by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged.

Derivatives underlying risk exposure – the potential exposure characterized by the level of banks' concentration in particular underlying instruments, in general. Exposure can result from market risk, credit risk, and operational risk, as well as, interest rate risk.

Domestic deposits to total assets – total domestic office deposits as a percent of total assets on a consolidated basis.

Earning assets – all loans and other investments that earn interest or dividend income.

Efficiency ratio – Noninterest expense less amortization of intangible assets as a percent of net interest income plus non-interest income. This ratio measures the proportion of net operating revenues that are absorbed by overhead expenses, so that a lower value indicates greater efficiency.

Estimated insured deposits – in general, insured deposits are total domestic deposits minus estimated uninsured deposits. Beginning March 31, 2008, for institutions that file Call Reports, insured deposits are total assessable deposits minus estimated uninsured deposits. Beginning September 30, 2009, insured deposits include deposits in accounts of \$100,000 to \$250,000 that are covered by a temporary increase in the FDIC's standard maximum deposit insurance amount (SMDIA). The Dodd-Frank Wall Street Reform and Consumer Protection Act enacted on July 21, 2010, made permanent the standard maximum deposit insurance amount (SMDIA) of \$250,000. Also, the Dodd-Frank Act amended the Federal Deposit Insurance Act to include noninterest-bearing transaction accounts as a new temporary deposit insurance account category. All funds held in noninterest-bearing transaction accounts were fully insured, without limit, from December 31, 2010, through December 31, 2012.

Failed/assisted institutions – an institution fails when regulators take control of the institution, placing the assets and liabilities into a bridge bank, conservatorship, receivership, or another healthy institution. This action may require the FDIC to provide funds to cover losses. An institution is defined as "assisted" when the institution remains open and receives assistance in order to continue operating.

Fair Value – the valuation of various assets and liabilities on the balance sheet—including trading assets and liabilities, available-for-sale securities, loans held for sale, assets and liabilities accounted for under the fair value option, and foreclosed assets—involves the use of fair values. During periods of market stress, the fair values of some financial instruments and nonfinancial assets may decline.

FHLB advances – all borrowings by FDIC insured institutions from the Federal Home Loan Bank System (FHLB), as reported by Call Report filers, and by TFR filers prior to March 31, 2012.

Goodwill and other intangibles – intangible assets include servicing rights, purchased credit card relationships, and other identifiable intangible assets. Goodwill is the excess of the purchase price over the fair market value of the net assets acquired, less subsequent impairment adjustments. Other intangible assets are recorded at fair value, less subsequent quarterly amortization and impairment adjustments.

Loans secured by real estate – includes home equity loans, junior liens secured by 1-4 family residential properties, and all other loans secured by real estate.

Loans to individuals – includes outstanding credit card balances and other secured and unsecured consumer loans.

Long-term assets (5+ years) – loans and debt securities with remaining maturities or repricing intervals of over five years.

Maximum credit exposure – the maximum contractual credit exposure remaining under recourse arrangements and other seller-provided credit enhancements provided by the reporting bank to securitizations.

Mortgage-backed securities – certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by government-sponsored or private enterprises. Also, see “Securities,” below.

Net charge-offs – total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.

Net interest margin – the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.

Net loans to total assets – loans and lease financing receivables, net of unearned income, allowance and reserves, as a percent of total assets on a consolidated basis.

Net operating income – income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).

Noncurrent assets – the sum of loans, leases, debt securities, and other assets that are 90 days or more past due, or in non-accrual status.

Noncurrent loans & leases – the sum of loans and leases 90 days or more past due, and loans and leases in nonaccrual status.

Number of institutions reporting – the number of institutions that actually filed a financial report.

New reporters – insured institutions filing quarterly financial reports for the first time.

Other borrowed funds – federal funds purchased, securities sold with agreements to repurchase, demand notes issued to the U.S. Treasury, FHLB advances, other borrowed money, mortgage indebtedness, obligations under capitalized leases and trading liabilities, less revaluation losses on assets held in trading accounts.

Other real estate owned – primarily foreclosed property. Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a *Thrift Financial Report* (TFR), the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for TFR filers the components of other real estate owned are reported gross of valuation allowances. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.)

Percent of institutions with earnings gains – the percent of institutions that increased their net income (or decreased their losses) compared to the same period a year earlier.

“Problem” institutions – federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. “Problem” institutions are those institutions with financial, operational, or managerial weaknesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a “4” or “5.” The number and assets of “problem” institutions are based on FDIC composite ratings. Prior to March 31, 2008, for institutions whose primary federal regulator was the OTS, the OTS composite rating was used.

Recourse – an arrangement in which a bank retains, in form or in substance, any credit risk directly or indirectly associated with an asset it has sold (in accordance with generally accepted accounting principles) that exceeds a pro rata share of the bank’s claim on the asset. If a bank has no claim on an asset it has sold, then the retention of any credit risk is recourse.

Reserves for losses – the allowance for loan and lease losses on a consolidated basis.

Restructured loans and leases – loan and lease financing receivables with terms restructured from the original contract. Excludes restructured loans and leases that are not in compliance with the modified terms.

Retained earnings – net income less cash dividends on common and preferred stock for the reporting period.

Return on assets – bank net income (including gains or losses on securities and extraordinary items) as a percentage of average total (consolidated) assets. The basic yardstick of bank profitability.

Return on equity – bank net income (including gains or losses on securities and extraordinary items) as a percentage of average total equity capital.

Risk-based capital groups – definition:

(Percent)	Total Risk-Based Capital*		Tier 1 Risk-Based Capital*		Tier 1 Leverage	Tangible Equity
Well-capitalized	≥10	and	≥6	and	≥5	–
Adequately capitalized	≥8	and	≥4	and	≥4	–
Undercapitalized	≥6	and	≥3	and	≥3	–
Significantly undercapitalized	<6	or	<3	or	<3	and >2
Critically undercapitalized	–		–		–	≤2

* As a percentage of risk-weighted assets.

Risk Categories and Assessment Rate Schedule – The current risk categories became effective January 1, 2007. Capital ratios and supervisory ratings distinguish one risk category from another. Effective April 1, 2011, risk categories for large institutions (generally those with at least \$10 billion in assets) were eliminated. The following table shows the relationship of risk categories (I, II, III, IV) for small institutions to capital and supervisory groups as well as the initial base assessment rates (in basis points) for each risk category. Supervisory Group A generally includes institutions with CAMELS composite ratings of 1 or 2; Supervisory Group B generally includes institutions with a CAMELS composite rating of 3; and Supervisory Group C generally includes institutions with CAMELS composite ratings of 4 or 5. For purposes of risk-based assessment capital groups, undercapitalized includes institutions that are significantly or critically undercapitalized.

Capital Category	Supervisory Group		
	A	B	C
1. Well Capitalized	I 5–9 bps	II 14 bps	III 23 bps
2. Adequately Capitalized	II 14 bps		
3. Undercapitalized	III 23 bps		IV 35 bps

Effective April 1, 2011, the initial base assessment rates are 5 to 35 basis points. An institution's total assessment rate may be less than or greater than its initial base assessment rate as a result of additional risk adjustments.

The base assessment rates for small institutions in Risk Category I are based on a combination of financial ratios and CAMELS component ratings (the financial ratios method).

As required by Dodd-Frank, the calculation of risk-based assessment rates for large institutions no longer relies on long-term debt issuer ratings. Rates for large institutions are based on CAMELS ratings and certain forward-looking financial measures combined into two scorecards—one for most large institutions and another for the remaining very large institutions that are structurally and operationally complex or that pose unique challenges and risks in case of failure (highly complex institutions). In general, a highly complex institution is an institution (other than a credit card bank) with more than \$500 billion in total assets that is controlled by a parent or intermediate parent company with more than \$500 billion in total assets or a processing bank or trust company with total fiduciary assets of \$500 billion or more. The FDIC retains its ability to take additional information into account to make a limited adjustment to an institution's total score (the large bank adjustment), which will be used to determine an institution's initial base assessment rate.

Effective April 1, 2011, the three possible adjustments to an institution's initial base assessment rate are as follows: (1) **Unsecured Debt Adjustment:** An institution's rate may decrease by up to 5 basis points for unsecured debt. The unsecured debt adjustment cannot exceed the lesser of 5 basis points or 50 percent of an institution's initial base assessment rate (IBAR). Thus, for example, an institution with an IBAR of 5 basis points would have a maximum unsecured debt adjustment of 2.5 basis points and could not have a total base assessment rate lower than 2.5 basis points. (2) **Depository Institution Debt Adjustment:** For institutions that hold long-term unsecured debt issued by another insured depository institution, a 50 basis point charge is applied to the amount of such debt held in excess of 3 percent of an institution's Tier 1 capital. (3) **Brokered Deposit Adjustment:** Rates for small institutions that are not in Risk Category I and for large institutions that are not well capitalized or do not have a composite CAMELS rating of 1 or 2 may increase (not to exceed 10 basis points) if their brokered deposits exceed 10 percent of domestic deposits. After applying all possible adjustments (excluding the Depository Institution Debt Adjustment), minimum and maximum total base assessment rates for each risk category are as follows:

Total Base Assessment Rates*					Large and Highly Complex Institutions
Risk Category I	Risk Category II	Risk Category III	Risk Category IV		
Initial base assessment rate	5–9	14	23	35	5–35
Unsecured debt adjustment	-4.5–0	-5–0	-5–0	-5–0	-5–0
Brokered deposit adjustment	—	0–10	0–10	0–10	0–10
Total Base Assessment rate	2.5–9	9–24	18–33	30–45	2.5–45

* All amounts for all categories are in basis points annually. Total base rates that are not the minimum or maximum rate will vary between these rates. Total base assessment rates do not include the depository institution debt adjustment.

Beginning in 2007, each institution is assigned a risk-based rate for a quarterly assessment period near the end of the quarter following the assessment period. Payment is generally due on the 30th day of the last month of the quarter following the assessment period. Supervisory rating changes are effective for assessment purposes as of the examination transmittal date.

Special Assessment – On May 22, 2009, the FDIC board approved a final rule that imposed a 5 basis point special assessment as of June 30, 2009. The special assessment was levied on each insured depository institution's assets minus its Tier 1 capital as reported in its report of condition as of June 30, 2009. The special assessment was collected September 30, 2009, at the same time that the risk-based assessment for the second quarter of 2009 was collected. The special assessment for any institution was capped at 10 basis points of the institution's assessment base for the second quarter of 2009 risk-based assessment.

Prepaid Deposit Insurance Assessments – In November 2009, the FDIC Board of Directors adopted a final rule requiring insured depository institutions (except those that are exempted) to prepay their quarterly risk-based deposit insurance assessments for the fourth quarter of 2009, and for all of 2010, 2011, and 2012, on December 30, 2009. For regulatory capital purposes, an institution may assign a zero-percent risk weight to the amount of its prepaid deposit assessment asset. As required by the FDIC's regulation establishing the prepaid deposit insurance assessment program, this program ended with the final application of prepaid assessments to the quarterly deposit insurance assessments payable March 29, 2013. The FDIC issued refunds of any unused prepaid deposit insurance assessments on June 28, 2013.

[Note: Effective January 1, 2014, a small number of "advanced approach institutions" began reporting Tier 1 capital based on regulatory capital standards approved by the banking agencies in July 2013. For all other FDIC-insured institutions, prior existing reporting will continue until January 2015 when mandatory compliance for all institutions is scheduled to begin. <http://www.fdic.gov/regulations/capital/>. At that time a revised assessment rate schedule will be used to reflect the changes in the regulatory capital rules. <http://www.fdic.gov/news/news/financial/2014/fil14037.html>]

Risk-weighted assets – assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balance-sheet items multiplied by risk-weights that range from zero to 200 percent. A conversion factor is used to assign a balance sheet equivalent amount for selected off-balance-sheet accounts.

Securities – excludes securities held in trading accounts. Banks' securities portfolios consist of securities designated as "held-to-maturity," which are reported at amortized cost (book value), and securities designated as "available-for-sale," reported at fair (market) value.

Securities gains (losses) – realized gains (losses) on held-to-maturity and available-for-sale securities, before adjustments for income taxes. *Thrift Financial Report* (TFR) filers also include gains (losses) on the sales of assets held for sale. (TFR filers began filing Call Reports effective with the quarter ending March 31, 2012.)

Seller's interest in institution's own securitizations – the reporting bank's ownership interest in loans and other assets that have been securitized, except an interest that is a form of recourse or other seller-provided credit enhancement. Seller's interests differ from the securities issued to investors by the securitization structure. The principal amount of a seller's interest is generally equal to the total principal amount of the pool of assets included in the securitization structure less the principal amount of those assets attributable to investors, i.e., in the form of securities issued to investors.

Small Business Lending Fund – The Small Business Lending Fund (SBLF) was enacted into law in September 2010 as part of the Small Business Jobs Act of 2010 to encourage lending to small businesses by providing capital to qualified community institutions with assets of less than \$10 billion. The SBLF Program is administered by the U.S. Treasury Department (<http://www.treasury.gov/resource-center/sb-programs/Pages/Small-Business-Lending-Fund.aspx>).

Under the SBLF Program, the Treasury Department purchased noncumulative perpetual preferred stock from qualifying depository institutions and holding companies (other than Subchapter S and mutual institutions). When this stock has been issued by a depository institution, it is reported as "Perpetual preferred stock and related surplus." For regulatory capital purposes, this noncumulative perpetual preferred stock qualifies as a component of Tier 1 capital.

Qualifying Subchapter S corporations and mutual institutions issue unsecured subordinated debentures to the Treasury Department through the SBLF. Depository institutions that issued these debentures report them as "Subordinated notes and debentures." For regulatory capital purposes, the debentures are eligible for inclusion in an institution's Tier 2 capital in accordance with their primary federal regulator's capital standards. To participate in the SBLF Program, an institution with outstanding securities issued to the Treasury Department under the Capital Purchase Program (CPP) was required to refinance or repay in full the CPP securities at the time of the SBLF funding. Any outstanding warrants that an institution issued to the Treasury Department under the CPP remain outstanding after the refinancing of the CPP stock through the SBLF Program unless the institution chooses to repurchase them.

Subchapter S corporation – a Subchapter S corporation is treated as a pass-through entity, similar to a partnership, for federal income tax purposes. It is generally not subject to any federal income taxes at the corporate level. This can have the effect of reducing institutions' reported taxes and increasing their after-tax earnings.

Trust assets – market value, or other reasonably available value of fiduciary and related assets, to include marketable securities, and other financial and physical assets. Common physical assets held in fiduciary accounts include real estate, equipment, collectibles, and household goods. Such fiduciary assets are not included in the assets of the financial institution.

Unearned income & contra accounts – unearned income for *Call Report* filers only.

Unused loan commitments – includes credit card lines, home equity lines, commitments to make loans for construction, loans secured by commercial real estate, and unused commitments to originate or purchase loans. (Excluded are commitments after June 2003 for originated mortgage loans held for sale, which are accounted for as derivatives on the balance sheet.)

Yield on earning assets – total interest, dividend, and fee income earned on loans and investments as a percentage of average earning assets.
