¹ The effective rates from 1950 through 1984 vary from the statutory rate of 0.0833 percent due to assessment credits provided in those years. The statutory rate increased to 0.12 percent in 1990 and to a minimum of 0.15 percent in 1991. The effective rates in 1991 and 1992 vary because the FDIC exercised new authority to increase assessments above the statutory rate when needed. Beginning in 1993, the effective rate is based on a risk-related premium system under which institutions pay assessments in the range of 0.23 percent to 0.31 percent. In May 1995, the BIF reached the mandatory recapitalization level of 1.25%. As a result, the assessment rate was reduced to 4.4 cents per \$100 of insured deposits and assessment premiums totaling \$1.5 billion were refunded in September 1995.

² Includes \$210 million for the cumulative effect of an accounting change for certain postretirement benefits.

³ Includes \$105.6 million net loss on government securities.

⁴ Includes \$80.6 million of interest paid on capital stock between 1933 and 1948.

*For detail of years 1933 through 1972, please refer to the 1996 annual report.
