Banking Profile

Second Quarter 1996

COMMERCIAL BANKING PERFORMANCE - SECOND QUARTER 1996

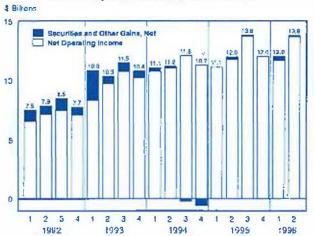

- Banks Narrowly Miss New Quarterly Earnings Record
- Net Income Of \$13.78 Billion Is Second-Highest Ever
- Profits Propelled By Strong Growth In Noninterest Revenues
- Net Interest Margins Register Slight Improvement

Insured commercial banks earned \$13.78 billion in the second quarter of 1996. This is the second-highest quarterly total ever reported by the industry, only \$45 million less than the \$13,83 billion banks earned in the third quarter of 1995. A record level of noninterest income and lower noninterest expense outweighed rising loan-loss expenses as industry earnings rose by \$1.8 billion over the levels of the previous and yearearlier quarters. The average return on assets (ROA) rose to 1.27 percent, the third-highest level recorded in the 14 years that the industry has reported quarterly earnings. Although the greatest earnings Improvements were at the largest banks, banks in all asset-size groups reported higher ROAs than in the previous quarter and a year earlier. More than 95 percent of all banks were profitable in the second quarter, and 70 percent reported ROAs above one percent. For the first six months of 1936, commercial banks earned \$25.5 billion, an increase of 10.3

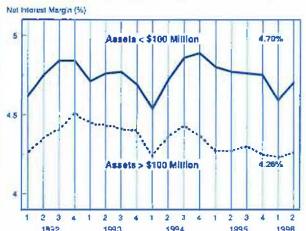

percent (\$2.4 billion) from their profits in the first half of 1995.

The strongest contribution to the industry's earn. ings improvement in the second quarter came from noninterest income, which totaled \$24.1 billion — an increase of 9.0 percent from the previous quarter, and 19.8 percent more than banks earned a year ago. Higher fee Income and merger-related gains on sales of assets helped lift total noninterest revenues. In contrast, noninterest expenses declined by \$1.3 billion from the first quarter of 1996 (when expenses were inflated by merger-related restructuring charges), and were up by only \$1.8 billion (4.8 percent) from a year earlier. Provisions for loan losses, at \$4.2 billion, were up by 17.1 percent from the first quarter, and were 45 percent higher than a year ago. Net interest income was up \$509 million from the first quarter, and was 5.3 percent higher than in the second quarter of 1995.

Quarterly Net Income, 1992 - 1996

Quarterly Net Interest Margins, 1992 - 1996

Jim McFødyen (202) 898-7027

Ross Weldrop (202) 898-3951

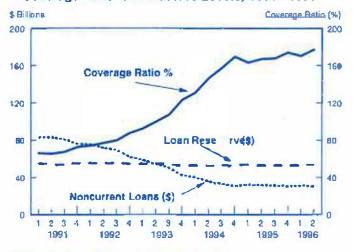

The industry's net interest margin increased for the second time in the past seven quarters, rising slightly to 4.29 percent. In the previous guarter, margins averaged 4.26 percent, while a year ago, the average was 4.31 percent. Both average asset yields and average funding costs declined during the quarter. The average yield on banks' interest-earning assets fell by seven basis points, to 8.20 percent from 8.27 percent in the first quarter. The average cost of funding interest-earning assets fell by 11 basis points, from 4.02 percent to 3.91 percent. Total interest income was slightly lower than in the previous quarter, but was up by 2.1 percent from a year ago. Interest expense was lower than in the previous and year-earlier quarters. Improvement in net interest margins was greatest at the smallest and largest banks, while medium-sized institutions banks with \$100 million to \$10 billion in assets showed either nominal improvement or some slippage in average margins.

Quarterly Net Loan Charge-Off Rates 1992 - 1996

An increase in credit-quality problems was evidenced by a 36.3-percent (\$1-billon) Increase in net loan charge-offs compared to a year ago. The \$3.8 billion that banks charged off in the second quarter was the second-highest quarterly total in the past ten quarters, after the \$4.0 billion registered in the fourth quarter of 1995. Much of the rise in charge-off activity occurred at banks with assets greater than \$1 billion. The heightened charge-off activity helped reduce banks' noncurrent foans by \$832 million, with most of the improvement occurring at larger banks. Banks replenished their loan-loss reserves by setting aside \$4.2 billion in loan-loss provisions. A \$622-million increase in the industry's aggregate reserves (reflecting the excess of provisions over net charge-offs, plus other

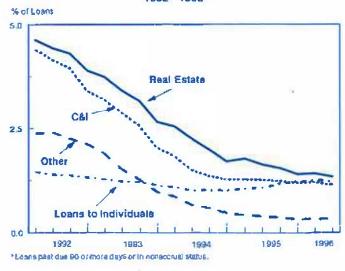

Coverage Ratio* and Reserve Levels, 1991 - 1996

"Loan-Loss Reserves to Noncurrent Loans and Leases

adjustments) combined with the decline in noncurrent loans, raised the industry's "coverage ratio" to a record \$1.77 in reserves for every \$1.00 of noncurrent loans. Net charge-offs on credit-card loans accounted for almost two-thirds (61 percent) of all net charge-offs in the second quarter. The annualized net charge-off rate on banks' credit-card loans was 4.48 percent in the second quarter, its highest level since the fourth quarter of 1992. Net charge-offs on other loans to individuals also remained high by recent standards. The annualized net charge-off rate on these loans in the second quarter was 0.80 percent. Net charge-offs on commercial and industrial loans were higher than in the previous and year-earlier quarters, but remained low compared to pre-1994 levels. Agricultural chargeoffs also registered an increase, due to stepped-up charge-off activity at a few large banks. Noncurrent

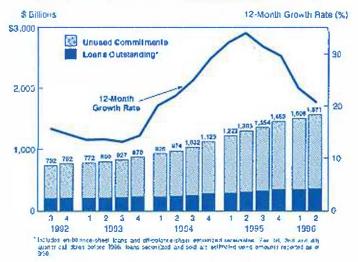

Quarterly Noncurrent Loan Rates 1992 - 1996*

agricultural loans declined during the quarter, but remained higher than a year ago. Net charge-off rates on other loan categories showed either improvement or little change.

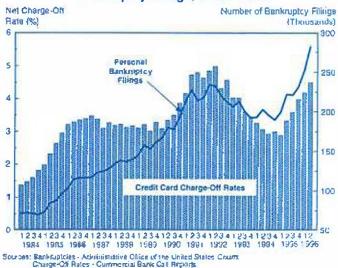

In spite of the rising level of loan losses, banks' creditcard loans continued to increase more rapidly than most other categories of loans. In the second quarter, bank credit-card loans grew by \$7.3 billion (3.6 percent), more than home mortgages (up \$4.8 billion), loans secured by commercial real estate (up \$5.6 billion), or other loans to individuals (up \$5.9 billion). However, growth in credit cards registered a smaller increase than commercial and industrial loans (up \$9.5 billion). In the past twelve months, bank credit-card loans have increased by 9.1 percent (\$17.4 billion), while all other bank loans grew by 7.5 percent. Part of the apparent strength in credit-card lending stems from reduced securitization and sates of credit-card receivables. If adjustments are made to reflect securitization activity, credit-card lending growth shows a slowing trend since the middle of last year. Annual data on loans to small U.S. businesses and farms indicate that their overall growth rate for the past 12 months has slowed slightly, to 5.0 percent, from 6.8 percent in the preceding 12-month period. During the same time, the rate of growth for loans to larger U.S. businesses and farms slowed far more drastically, from a 12.7-percent

Credit Card Growth Is Decelerating Credit Card Loans and Unused Commitments, 9/92 - 6/96

increase between June 30, 1994 and June 30, 1995 to a 5.2-percent increase in the most recent 12 months. Banks paid \$8.1 billion in dividends in the second quarter, a 19.5-percent increase from a year ago. Retained earnings added \$5.7 billion to the industry's equity capital. Total equity rose by \$11.5 billion to \$364.9 billion, or 8.30 percent of total industry assets. This is the highest level registered since 1941. Much of the increase in equity apart from the contribution from retained earnings came from growth in goodwill created by mergers. The overall increase in industry equity was accomplished despite a \$2.3-billion deduction attributable to higher unrealized losses in banks' available-for-sale securities portfolios. The industry's tier one (core) capital, which excludes goodwill and is not adjusted for changes in values of securities holdings, registered a \$5.6-billion net increase.

Credit Card Loss Rates and Personal Bankruptcy Filings, 1984 - 1996

The number of commercial banks filing Call reports declined to 9,689 from 9,838 at the end of March. Thirty new banks were chartered during the quarter, bringing the total number of new charters in the first half of 1996 to 59. Mergers absorbed 175 banks in the second quarter, and two banks failed. The number of banks on the FDIC's "Problem List" declined by 28 institutions, to 99 banks with combined assets of \$8 billion, from 127 banks with \$13 billion in assets at the end of the first quarter.

SAVINGS INSTITUTION PERFORMANCE - SECOND QUARTER, 1996

- Earnings Of \$2.6 Billion Set Second Consecutive Quarterly Record
- Industry ROA Exceeds One Percent For Second Quarter in A Row
- Increase In Net Interest Margins Continues To Propel Earnings
- Number Of Savings Institutions Falls Below 2,000

Savings institutions earned a record \$2.6 billion during the second quarter for an annualized return on assets (ROA) of 1.02 percent. This is the second consecutive quarter that the industry's ROA has exceeded one percent. Industry earnings exceeded first quarter profits by \$50 million, setting a new quarterly record for both earnings and ROA. So far in 1996, thrifts have reported the two highest quarterly levels of earnings and ROAs ever turned in by the industry. Income tax expenses declined by \$215 million from the previous quarter as one institution reported a large tax benefit.1 The other significant contribution to the record earnings came from a \$207-million increase in net interest income. As a result of these improvements, core earnings (net income excluding securities sales and extraordinary items) Increased by \$173 million. The higher core earnings offset a \$193-million decline in pre-tax gains from sales of securities. The return on equity (ROE) this quarter, at 12.14 percent, was slightly higher than the first quarter's ROE of 11.97 percent.

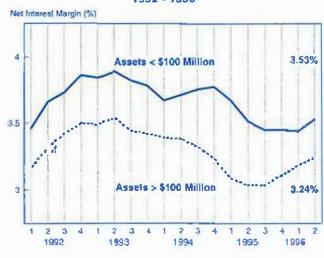

Quarterly Net Income, 1992 - 1998

Profitability in the second quarter was well above the level of the second quarter of 1995, when the industry reported a 0.76 percent ROA. Net income was \$686 million (36 percent) higher than a year earlier when thrifts earned \$1.9 billion. Net interest income in the second quarter of 1996 was \$541 million higher than In the same period in 1995. Total interest income was \$132 million higher, while interest expense declined by \$409 million. Noninterest income increased by \$325 million from a year earlier.

Net Income for the first six months of 1996 totaled \$5.1 billion, 40 percent more than thrifts earned in the first half of 1995. The industry ROA in the first half of 1996 reached 1.00 percent, up from 0.72 percent in the first half of last year. Net interest income in the first half of this year was \$767 million (flve percent) higher than in the same period of 1995. Total interest Income increased by \$841 million or two percent, while interest expense changed little, rising \$74 million. Earning assets were \$6.1 billion higher at midyear than at midyear 1995. With two consecutive quarters of strong earnings, the thrift industry has achieved a ROE of 11.92 percent compared to a 8.96 percent ROE in the first half of 1995.

Quarterly Net Interest Margins 1992 - 1996

Net interest margins rose by six basis points from the first quarter, to 3.26 percent. The average cost of funding earning assets declined by ten basis points while the average yield on earning assets

¹First Nationwide 8ank, a Federal Savings Bank in Dallas, Texas, reported a net tax benefit of \$110-million for the second quarter.

fell by just four basis points. Net interest margins improved from the previous quarter in all regions and in all size groups. Compared to a year ago, margins were up by 21 basis points, from 3.05 percent. Although the yield on earning assets remained unchanged from a year earlier, thrifts have improved margins by reducing the cost of funding earning assets. Over the past twelve months, as the yield curve has become steeper, average asset yields have remained steady while average funding costs have declined. Thrifts have increased the average maturity of their assets by emphasizing growth in loans over securities. At the same time they have reduced the average maturity of their liabililies by replacing deposits with other borrowings. Nondeposit borrowings have increased by \$21 billion from a year ago with almost two-thirds (63 percent) of the increase consisting of advances from Federal Home Loan Banks reported by Thrift Financial Report (TFR) filers. Deposits held by thrifts were \$17.3 billion lower than a year ago, falling \$7.3 billion during the second quarter.

Quarterly Net Charge-Off Rates
1992 - 1996

Northeast

Rest of U.S.

1992 1993 1994 1995 1996

Earnings were strong In all regions, with the West Region still trailing the rest of the nation. Thrifts in the West Region registered a 0.75 percent ROA, marking their second consecutive quarter of record profitability. Over 73 percent of the Region's thrifts showed improved earnings from the second quarter of 1995 when their aggregate ROA was 0.47 percent. The recovery of real estate markets in the West has tagged the rest of the nation, and thrifts in the Region have had to use aggressive charge-offs that have held down earnings to keep their noncurrent real estate loans from growing. The

average net charge-off rate at thrifts in the West Region was an annualized 0.46 percent of total loans this quarter, compared to 0.59 percent in the second quarter of 1995. For the industry as a whole, the average net charge-off rate was 0.33 percent, down from 0.36 percent a year ago.

Loan portfolios increased for the second consecutive quarter as thrifts continued to accumulate home mortgages. Loans secured by 1-4 family residential property were up by \$7.9 billion in the second quarter. Reserves for loan tosses were little changed, but noncurrent loans declined by \$522 million, with much, if not all, of the decline attributable to a change in the way that institutions report noncurrent loans on their TFA.2 If reserves are adjusted to compensate for these reporting changes, the "coverage ratio" declined to 74 cents in reserves for every dollar of noncurrent loans at midyear, from 76 cents at the end of the first quarter. Because of the reporting change, it is impossible to determine whether the decline in the amount of noncurrent loans reflects actual improvement in the industry's asset quality, because as much as \$677 million in specific reserves may have been previously included in noncurrent loans.

Total assets for the thrift industry remained above \$1 trillion, increasing by \$6.7 billion during the second quarter. Loans increased by over \$11 billion; other assets, mostly investments in subsidiaries, declined by \$5.3 billion. Additional TFR reporting changes resulted in the consolidation of assets and liabilities of subsidiaries that were previously left unconsolidated. With the change in subsidiary reporting, the asset mix for the industry has changed, accounting for the decline in the recorded investment in subsidiaries.

Equity capital rose by \$279 million from the first quarter. Because of the large increase in assets, the equity-to-assets ratio declined for the first time in over a year, to 8.40 percent from 8.42 percent at the end of the first quarter. However, this ratio remains above the 8.18 percent level of a year ago. Thrifts retained \$1 billion from their earnings in the second quarter after paying out \$1.6 billion in cash dividends. The \$525-million unrealized gain on available-for-sale securities at the end of the first

²New reporting Instructions were introduced in the first quarter of 1996 that require TFR filers to not specific reserves from noncurrent loans. Previously, these reserves were included in noncurrent loans. Total reserves still include both specific and general reserves.

quarter declined to an unrealized loss of \$252 million at midyear as increases in longer-term interest rates reduced the market value of some securities. This swing in securities values reduced equity capital by \$777 million. Core capital, which excludes the unrealized loss on available-for-sale securities, rose by \$671 million during the quarter, but an increase in average assets resulted in a slight decline in the core capital (leverage) ratio from 7.88 percent to 7.87 percent.

The second quarter of 1996 marks the first time since 1937 that the thrift industry has had fewer than 2,000 institutions. At the end of the second quarter 1,981 thrifts filed financial reports, down by

24 from the first quarter. The commercial banking industry absorbed 17 savings institutions with \$4.6 billion in assets during the second quarter, while the thrift industry absorbed only five commercial banks with \$325 million in assets. Consolidation within the thrift industry resulted in an additional decline of 12 institutions. There were 24 mutual-to-stock conversions during the second quarter. No thrifts failed during the second quarter, marking four consecutive quarters in which no thrifts failed. The number of "problem" institutions fell to 38 from 42 at the end of the first quarter. Assets of "problem" institutions declined from \$13.5 billion to \$9.9 billion.

ALL FDIC-INSURED INSTITUTIONS

- BIF-Insured Deposits Dip Slightly; Reserve Ratio Rises To 1.32 Percent
- SAIF-Insured Deposits Fall \$3 Billion; Reserve Ratio Climbs To 0.55 Percent
- Two BIF Members And No SAIF Members Fail In The Second Quarter

The total assets of all FDIC-insured institutions increased by \$95 billion in the quarter ending June 30, 1996. This increase occurred primarily in members of the Bank Insurance Fund (BIF), as the assets reported by members of the Savings Association Insurance Fund (SAIF) remained virtually unchanged. The number of insured institutions fell by 173 during the second quarter, to 11,670, with the number of BIF members falling below 10,000 for the first time in the FDIC's history.

BIF members increased their reliance on uninsured deposits in the second quarter. Their total deposits climbed \$37.7 billion during the three-month period, including increases of \$7.6 billion in foreign-office deposits and \$31.2 billion in large, uninsured domestic deposits. As a result, deposits insured by the BIF fell slightly, by \$1.1 billion. This decline, in combination with modest growth of the BIF, caused the fund's reserve ratio to increase by one basis point, from 1.31 percent on March 31 to 1.32 percent on June 30.

SAIF-insured deposits also declined during the second quarter, by nearly \$3 billion. With the fund growing to \$3.9 billion, the reserve ratio of the SAIF rose 4 basis points, to 0.55 percent on June 30. The decline in SAIF deposits is attributable to the continuing "mlgration" of deposits from SAIF insurance to BIF insurance. Because SAIF insurance premiums are now significantly higher than BIF premiums, organizations that own both BIF and SAIF affiliates have an incentive to reduce their deposit insurance premiums by encouraging their customers to shift deposits from a SAIF affiliate to a BIF affiliate. One such organization has reduced its SAIF deposits by more than \$9 billion in this manner, including the shifting of \$3 billion during the second quarter. In the absence of legislation that would enable the equalization of premiums, other thrift organizations are seeking to establish or acquire BIF-member affiliates. Federal regulatory agencies recently approved several of these applications.

Two BIF-member commercial banks, with total assets of \$104 million, failed during the second quarter, raising the total BIF failures for the first half of 1996 to three, with failed assets of \$139 million. No SAIF member failed during the first half of 1996, but one of the BIF members that failed during the second quarter was an "Oakar" bank (see below) that held some SAIF insured deposits. Therefore, the SAIF became liable for a portion of the estimated insurance loss for this bank, which is allocated according to the proportion of the bank's deposits insured by each fund.

"Oekar" deposits. A member of one insurance fund can acquire deposits insured by the other fund, but this portion of the acquiring institution's deposits retains coverage under the seller's fund. BIF members acquired an additional \$7 billion in SAIF-assessable deposits during the second quarter of 1996, raising their total SAIF-assessable deposits as of June 30 to \$238 billion, or 32.4 percent of the SAIF assessment base. A year earlier, BIF-member Oakar deposits were \$205 billion, or 28.0 percent to the total SAIF assessment base. Also, SAIF members may acquire BIF-assessable deposits, and as of June 30 they held \$12.3 billion in such deposits, or 0.5 percent of the BIF assessment base.

"Sasser" institutions. Institutions are generally prohibited from converting their membership from one insurance fund to the other. Since 1989, however, SAIF-member savings associations have been permitted to convert their charter to that of a savings or commercial bank white retaining SAIF membership. Converted institutions leave OTS supervision and become subject to supervision by one of the three federal banking agencies. As of June 30, 1996, there were 312 SAIF-member institutions that had converted to bank charters, including 229 state-chartered savings banks and 83 commercial banks. These 312 institutions held SAIF-assessable deposits of \$54.2 billion, or 7.4 percent of the total SAIF assessment base. Federal legislation enacted on August 20, 1996, forgives thrifts' deferred tax liability on their bad-debt reserves established prior to 1988. For many thrifts, this significantly reduces the potential cost of becoming a bank, and an increase in Sasser conversions can be expected. particularly among those thrifts that are pursuing strategies to diversify their mortgage-dominated investment portfolios.

FICO bonds. The Financing Corporation (FICO) has a first claim on up to \$793 million of SAIF assessment revenue each year in order to fund interest payments on FICO bonds. These 30-year bonds, issued in the years 1987 through 1989, were sold to fund losses incurred by the now-defunct Federal Savings and Loan Insurance Corporation. Assessments only from SAIF-member savings associations are available to the FICO, which excludes SAIF assessments paid by BIF-member Oakars and SAIF-member Sassers. At the current SAIF assessment rates, an assessment base of \$333.3 billion is required to generate the FICO assessment. The FICOavailable base has been shrinking steadily since the SAIF was created in 1989, and on June 30 it was \$443.7 billion, or \$110 billion above the required base. On March 31, this "cushion" was \$118 billion.

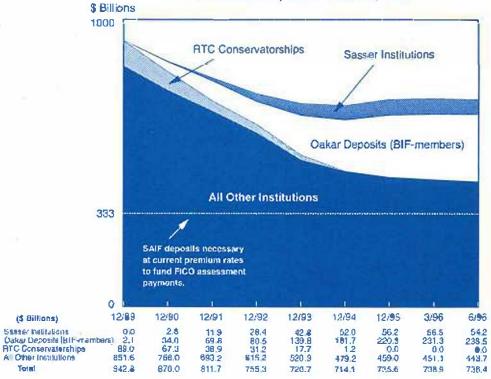

¹The average SAIF assessment rate is 23.4 cents per \$100 of assessable deposits, based on a range of 23 to 31 cents. The average BIF rate is 0.3 cents per \$100, based on a range of 0 to 27 cents, subject to a minimum annual assessment of \$2.000.

NOTES TO USERS

This publication contains financial data and other information for depository institutions insured by the Federal Deposit Insurance Corporation (FDIC). These notes are an integral part of this publication and provide information regarding the comparability of source data and reporting differences over time. The information presented in the FDIC Quarterly Banking Profile is divided into the following groups of institutions:

FDIC-Insured Commercial Banks (Tables I-A through V-A.)

This section covers commercial banks insured by the FDIC either through the Bank Insurance Fund (BIF) or through the Savings Association Insurance Fund (SAIF). These institutions are regulated by and submit financial reports to one of the three federal commercial bank regulators (the Board of Governors of the Federal Reserve System, the FDIC or the Office of the Comptroller of the Currency).

FDIC-Insured Savings Institutions (Tables I-B through V-B.)

This section covers savings institutions insured by either BIF or SAIF that operate under state or federal banking codes applicable to thrift Institutions, except for one self-liquidating institution primarily funded by the FSLIC Resolution Fund (FRF). Savings institutions that have been placed in Resolution Trust Corporation conservatorship are also excluded from these tables while in conservatorship. The institutions covered in this section are regulated by and submit financial reports to one of two Federal regulators – the FDIC or the Office of Thrift Supervision (OTS).

FDIC-Insured Institutions by Insurance Fund (Tables I-C through II-E.)

Summary balance-sheet and earnings data are provided for commercial banks and savings institutions according to insurance fund membership. BIF-member institutions may acquire SAIF insured deposits, resulting in institutions with some deposits covered by both Insurance funds. Also, SAIF members may acquire BIF-insured deposits. The insurance fund membership does not necessarily reflect which fund insures the largest percentage of an institution's deposits. Therefore, the BIF-member and the SAIFmember tables each include deposits from both insurance funds. Depository institutions that are not insured by the FDIC through either the BIF or SAIF are not included in the FDIC Quarterly Banking Profile. U.S. branches of institutions headquartered in foreign countries and non-deposit trust companies are not included. Efforts are made to obtain financial reports for all active institutions. However, in some cases, final financial reports are not available for institutions that have closed or converted their charter.

DATA SOURCES

The financial information appearing in this publication is obtained primarily from the Federal Financial Institutions Examination Council (FFIEC) Call Reports and the OTS Thrift Financial Reports submitted by all FDIC-insured depository institutions. This Information Is stored on and retrieved from the FDIC's Research Information System (RIS) data base.

COMPUTATION METHODOLOGY

Certain adjustments are made to the OTS Thrift Financial Reports to provide closer conformance with the reporting and accounting requirements of the FFIEC Call Reports. Beginning with June 1996, the Thrift Financial Report is completed on a fully consolidated basis, with the exception of subsidiary depository institutions being reported on the equity method of accounting. Prior to this time, this report reflected the consolidation of the parent thrift with finance subsidiaries. All other subsidiaries were reported on an equity or cost basis. Some accounting differences exist, such as asset sales with recourse, for which the data necessary to reconcile these differences are not reported.

All asset and liability figures used in calculating performance ratios represent average amounts for the period (beginning-of-period amount plus end-of-period amount plus any interim periods, divided by the total number of periods). For "pooling-of-interest" mergers, the assets of the acquired institution(s) are included in average assets since the year-to-date income includes the results of all merged institutions. No adjustments are made for "purchase accounting" mergers. Growth rates represent the percentage change over a 12-month period in totals for institutions in the base period to totals for institutions in the current period. Tables III and IV do not provide growth rates for the "Asset Size Distribution" since many institutions migrate between size groups.

Asset Migrations

All data are collected and presented based on the location of each reporting institution's main office. When a main office is relocated to another state, adjustments to priorperiod data may be made to more accurately reflect geographic growth rates. In other situations, no adjustments are possible. For example, reported data may include assets and liabilities located outside of the reporting institution's home state. Also, institutions may change their charters, resulting in an inter-industry migration, e.g. savings institutions can convert to commercial banks. These situations can affect state and regional totals.

RECENT ACCOUNTING CHANGES

FASB Statement 115, "Accounting for Certain Investments in Debt and Equity Securities" requires that securities that are not held in trading accounts be measured at either amortized cost or fair (market) value, depending on their classification category ("available-for-sale" or "held-to-maturity"). For additional details, see "Notes to Users," First Quarter, 1994, Quarterly Banking Profile.

On November 15, 1995 the FASB released a guide to the implementation of Statement 115 and provided a window (November 15, 1996 through December 31, 1995) during which banks could elect to sell or reclassify securities between categories without violating the provisions of the accounting rule. In most cases, Statement 115 requires an automatic marking-to-market of the entire held-to-maturity portfolio (previously valued at amortized cost) if any held-to-maturity security is sold or transferred. The one-time

opportunity to avoid this requirement was designed to allow the sale or reclassification of securities from the held-to-maturity category to available-for-sale or the trading portfolio without tainting the entire held-to-maturity category. The FASB announcement and guide also sought to provide further clarification of Statement 115, and correct misinterpretations of the original pronouncement.

DEFINITIONS (in alphabetical order)

All other assets – total cash, balances due from depository institutions, premises, fixed assets, direct investments in real estato, investment in unconsolidated subsidiaries, customers' liability on acceptances outstanding, assets held in trading accounts, federal funds sold, securities purchased with agreements to resell, and other assets. Beginning 3/31/94, FASB Interpretation 39 limited the netting of related trading assets and liabilities, which had the effect of increasing the amount of trading account assets reported.

All other liabilities – bank's liability on acceptances, limited-life preferred stock, and other liabilities. Effective 3/31/94, includes revaluation losses on assets held in trading accounts.

BIF-insured deposits (estimated) – the amount of deposits in accounts of less than \$100,000 insured by the BIF. For SAIF-member "Oakar" institutions, it represents the adjusted attributable amount acquired from BIF members. Capital category distribution – each institution's capital category is calculated or estimated from its financial report and does not reflect supervisory upgrades or downgrades:

(Percent)	High Based Capital		Hisk-Bosed Capital *		Tier 1 Leverage		Tang:ble Equily
Woll-capitalized	≥10	and	≥€	and	≥5		_
Adequately capitalized	≥≅	and	≥4	ลกส	>4		_
Under- capitalized	>6	and	≥3	and	≥3		_
Significantly undercapitalized	<6	or	<3	or	<3	and	>2
Critically undercapitalized	_				-		≤2

[&]quot;As a percentage of risk-weighted assists,

Construction and development loans – includes loans for all property types under construction, as welt as loans for land acquisition and development.

Core capital – common equity capital plus noncumulative perpetual preferred stock plus minority interest in consolidated subsidiaries, less goodwill and other ineligible Intangible assets. The amount of eligible intangibles (including mortgage servicing rights) included in core capital is limited in accordance with supervisory capital regulations.

Cost of funding earning assets – tetal Interest expense paid on deposits and other borrowed money as a percentage of average earning assets.

Derivative contracts, gross fair values (positive/negative) – are reported separately and represent the amount at which a contract could be exchanged in a transaction between willing parties, other than in a forced or liquidation sale. If a quoted market price is available for a contract, the fair value reported for that contract is calculated using this market price. If quoted market prices are not available, the reporting banks use the best estimate of fair value based on quoted market prices of similar contracts or on valuation techniques such as discounted cash flows. This

information is reported only by banks with assets greater than \$100 million.

Direct and indirect investments in real estate – excludes loans secured by real estate and property acquired through foreclosure.

Earning assets – all loans and other investments that earn interest or dividend income.

Estimated insured deposits – estimated amount of insured deposits (account balances less than \$100,000). The sum of all deposit balances in accounts of less than \$100,000 plus the number of accounts with balances greater than \$100,000 multiplied by \$100,000.

Failed/assisted institutions – An institution fails when regulators take control of the institution, placing the assets and liabilities into a bridge bank, conservatorship, receivership, or another healthy institution. This action may require the FDIC — or the RTC — to provide funds to cover losses. An institution is defined as "assisted" when the institution remains open and receives some insurance funds in order to continue operating.

FHLB advances – borrowings from the Federal Home Loan Bank (FHLB) reported by institutions that file a Thrift Financial Report. Institutions that file a Call Report do not report borrowings ("advances") from the FHLB separately. Goodwill and other intangibles – intangible assets include mortgage servicing rights, purchased credit card relationships and other identifiable intangible assets.

Loans secured by real estate – includes home equity loans, junior liens secured by 1-4 family residential properties and all other loans secured by real estate.

Loans to individuals – includes outstanding credit card balances and other secured and unsecured consumer loans

Long-term assets (5+ years) – loans and debt securities with remaining maturities or repricing intervals of over five years.

Mortgage-backed securities – certificates of participation in pools of residential mortgages and collateralized mortgage obligations issued or guaranteed by government-sponsored or private enterprises. Effective 3/31/94, the full implementation of FASB 115 meant that a portion of banks' mortgage-backed securities portfolio is now reported based upon fair (market) values; previously, all mortgage-backed securities not held in trading accounts were reported at either amortized cost or lower of cost or market.

Net charge-offs – total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off.

Net Interest margin – the difference between interest and dividends earned on interest-bearing assets and interest paid to depositors and other creditors, expressed as a percentage of average earning assets. No adjustments are made for interest income that is tax exempt.

Net operating income – income excluding discretionary transactions such as gains (or losses) on the sale of investment securities and extraordinary items. Income taxes subtracted from operating income have been adjusted to exclude the portion applicable to securities gains (or losses).

Noncurrent assets – the sum of loans, leases, debt securities and other assets that are 90 days or more past due, or in nonaccrual status. Noncurrent debt securities and other assets were not included prior to March 1991.

Noncurrent loans & leases – the sum of loans and leases 90 days or more past due, and loans and leases in nonactual status.

Number of institutions reporting – the number of institutions that actually filed a financial report.

Off-balance-sheet derivatives – represents the sum of the following: Interest-rate contracts (defined as the notional value of interest-rate swap, futures, forward and option contracts), foreign-exchange-rate contracts, commodity contracts and equity contracts (defined similarly to interest-rate contracts).

Futures and forward contracts – a contract in which the buyer agrees to purchase and the seller agrees to sell, at a specified future date, a specific quantity of underlying at a specified price or yield. These contracts exist for a variety of underlyings, including the traditional agricultural or physical commodities, as well as currencies and interest rates. Futures contracts are standardized and are traded on organized exchanges which set limits on counterparty credit exposure. Forward contracts do not have standardized terms and are traded over the counter.

Option contracts – a contract in which the buyer acquires the right to buy from or sell to another party some specified amount of underlying at a stated price (strike price) during a period or on a specified future date, in return for compensation (such as a fee or premium). The seller is obligated to purchase or sell the underlying at the discretion of the buyer of the contract.

Swaps – an obligation between two parties to exchange a series of cash flows at periodic intervals (settlement dates), for a specified period. The cash flows of a swap are either fixed, or determined for each settlement date by multiplying the quantity of the underlying (notional principal) by specified reference rates or prices. Except for currency swaps, the notional principal is used to calculate each payment but is not exchanged.

Other borrowed funds – federal funds purchased, securities sold with agreements to repurchase, demand notes issued to the U.S. Treasury, other borrowed money, mortgage indebtedness and obligations under capitalized leases. Effective 3/31/94, includes newly-reported item "Trading liabilities", less revaluation losses on assets held in trading accounts.

Other real estate owned – primarily foreclosed property, Direct and indirect investments in real estate ventures are excluded. The amount is reflected net of valuation allowances. For institutions that file a *Thrift Financial Report* (TFR), the valuation allowance subtracted also includes allowances for other repossessed assets. Also, for TFR filers the components of other real estate owned are reported gross of valuation allowances.

Percent of institutions with earnings gains – the percent of institutions that increased their net income (or decreased their losses) compared to the same period a year earlier. "Problem" institutions – Federal regulators assign a composite rating to each financial institution, based upon an evaluation of financial and operational criteria. The rating is based on a scale of 1 to 5 in ascending order of supervisory concern. "Problem" institutions are those Institutions with financial, operational, or managerial weak-

nesses that threaten their continued financial viability. Depending upon the degree of risk and supervisory concern, they are rated either a "4" or "5". For all BIF-member institutions, and for all SAIF-member Institutions for which the FDIC is the primary federal regulator, FDIC composite ratings are used. For all SAIF-member institutions whose primary federal regulator is the OTS, the OTS composite rating is used.

Restructured loans and leases – loan and lease financing receivables with terms restructured from the original contract. Excludes restructured loans and leases that are not in compliance with the modified terms.

Return on assets – net income (including gains or losses on securities and extraordinary items) as a percentage of average total assets. The basic yardstick of bank profitability. Return on equity – net income (including gains or losses on securities and extraordinary items) as a percentage of

average total equity capital.

Risk-weighted assets – assets adjusted for risk-based capital definitions which include on-balance-sheet as well as off-balance-sheet items multiplied by risk-weights that range from zero to 100 percent. Aconversion factor is used to assign a balance sheet equivalent amount for selected

off-balance-sheet accounts,

SAIF-insured deposits (estimated) – the amount of deposits in accounts of less than \$100,000 insured by the SAIF. For BIF-member "Oakar" institutions, it represents the adjusted attributable amount acquired from SAIF members.

Securities – excludes securities held in trading accounts. Effective 3/31/94, the full implementation of FASB 115 meant that a portion of banks' securities portfollos is now reported based upon fair (market) values; previously, all securities not held in trading accounts were reported at either amortized cost or lower of cost or market.

Securities gains (losses) – Realized gains (losses) on held-to-maturity and available-for-sale securities, before adjustments for income taxes. Thrift Financial Reporters (TFR) also include gains (losses) on the sales of assets held for sale. In all publications prior to September 1995, gains (losses) on sales of available-for-sale securities and assets held for sale were excluded for savings institutions that file a TFR.

Troubled real estate asset rate – noncurrent real estate loans plus other real estate owned as a percent of total real estate loans and other real estate owned.

Unused loan commitments – includes credit card lines, home equity lines, commitments to make loans for construction, loans secured by commercial real estate, and unused commitments to originate or purchase loans.

Volatile liabilities – the sum of large-denomination time deposits, foreign-office deposits, federal funds purchased, securities sold under agreements to repurchase, and other borrowings. Beginning 3/31/94, new reporting detail permits the exclusion of other borrowed money with original maturity of more than one year; previously, all other borrowed money was included. Also beginning 3/31/94, the newly-reported item "Trading liabilities", less revaluation losses on assets held in trading accounts, is included.

Yield on earning assets – total interest, dividend and fee income earned on loans and investments as a percentage of average earning assets.

23
