Mortgage-Cash Premium Puzzle

March 2022 1 / 12

EL SQA

Image: A Image: A

Motivation

- Modigliani-Miller theorem does not apply to real estate
- This Paper: Mortgage approval frictions

Note: Sample period is 1980-2017.

Mortgage-Cash Premium

What premium compensates home sellers for approval frictions?

- Theoretical Premium: 0.6%
 - ... with risk aversion, discounting, debt overhang, etc.: 3%
- Empirical Premium: 11.7%
 - Methodology: Repeat-sales hedonic regression
 - Data: Deeds records over 1980-2017

ELE SOO

• • = • • = •

Explanations of the Puzzle

- Omitted variables (i.e., "no puzzle")
 - Inconsistent with stable 11% premium across estimators and datasets
 - ... instrumental variable, semi-structural, data on non-accepted offers
- 2 Non-standard beliefs
 - Consistent with experimental survey of U.S. homeowners
 - ► Subjective Beliefs: Pessimistic priors explain 20% of puzzle
- Non-standard preferences
 - Uncertainty aversion can explain 70% of puzzle
 - ... less support for disappointment, loss aversion, present bias

ELE SQC

Empirical Premium

• Mortgage-Cash Premium: 11.7%

Outcome:	$\log(Price_{i,t})$			
Mortgaged _{i,t}	0.117 (0.000)	0.090 (0.004)	0.088 (0.000)	0.112 (0.000)
Sample	Baseline	New Homes	No Flips	Non Institutional
Zip Code-Month FE Hedonic-Month FE Property FE R-squared	Yes Yes Yes 0.907	Yes Yes No 0.647	Yes Yes Yes 0.963	Yes Yes Yes 0.895

Note: P-values in parentheses. Subscripts i, t denote property, month.

Framework

Home seller compares utility from two offers:

- All-cash offer: $u_{i,t}^C$
- Mortgaged offer: $u_{i,t}^M$
 - Price realized after transaction closes in one month
 - ► Success: Receive offer price $P_{i,t+1}^M \equiv P_{i,t}^C e^{\mu}$
 - ▶ Failure: Relist and sell at price $P_{i,t+1}^R \equiv P_{i,t}^C e^{-\kappa}$
- Equilibrium mortgage-cash premium solves $u_{i,t}^{C} = u_{i,t}^{M}$

▲□▶ ▲□▶ ▲ヨ▶ ▲ヨ▶ ヨヨ ののの

Theoretical Premium

• Implied probability of failure exceeds data by a factor of 5

Survey Results

 \bullet Subjective pessimism reduces puzzle from 8.9% to 7.2%

Survey Results

• Uncertainty aversion reduces puzzle from 7.2% to 0.7%

Conclusion

- Mortgaged buyers pay an 11% premium over cash buyers
- Transaction frictions imply a "reasonable" premium of 3%
- Subjective beliefs and uncertainty aversion best explain the gap

Implications:

• Promoting homeownership requires a large subsidy

Thank You!
