Highlights

- Financial institution balance sheets continue to reflect a heightened mismatch between asset and funding maturities that, coupled with tighter net interest margins, have left financial institutions more vulnerable to rising interest rates.
- The FDIC continues to emphasize the expectation that institutions manage interest rate risk in a prudent manner.
- The FDIC previously issued a video on interest rate risk tailored to directors as well as a series of more technical videos designed for management and staff involved in interest rate risk management.
- To reflect recent industry data and to expand on relevant topics, the FDIC has released updated videos.
- The videos address industry trends, board and management responsibilities, types of interest rate risk, different risk measurement systems, key modeling assumptions, internal controls, and independent review.
- The video for directors can be accessed at <https://fdic.gov/regulations/resources/director/virtual/irr.html>, and the series of videos for bank management and staff involved in interest rate risk management can be accessed at <https://fdic.gov/regulations/resources/director/technical/irr.html>.
- Alternatively, FDIC-insured institutions may download the videos through FDICconnect by contacting their FDICconnect coordinator.
