Strategic Planning in an Evolving Earnings Environment 3

The financial performance of banks is steadily improving; however, these institutions continue to face a challenging operating environment. This article provides an informal perspective on the strategic planning process and its importance for successful bank operations. The article concludes with a discussion of strategic planning in the context of issues bank boards and managements are dealing with today.

Bank Investment in Securitizations: The New Regulatory Landscape in Brief 13

During the most recent financial crisis, many banks suffered significant losses on investment-grade securitizations thought to be low-risk investments. Following enactment of the Dodd-Frank Act, federal bank regulatory agencies issued regulations and guidance to reduce the likelihood of this happening again. This article summarizes the most important new requirements related to investment in securitizations, including potential effects on capital, and explains how an investment decision process can be structured to help a bank remain compliant with these new requirements.

Regular Features

Regulatory and Supervisory Roundup 24

This feature provides an overview of recently released regulations and supervisory guidance.
The articles in this issue of Supervisory Insights address topics of importance to bankers and bank examiners. Featured articles in this issue discuss the importance of strategic planning for banks in the current challenging operating environment, and provide an overview of new regulations pertaining to securitization investments. As always, the articles in Supervisory Insights should not be viewed as supervisory or regulatory guidance, but are intended as a resource that some bankers and examiners may find useful.

Even though the financial performance and condition of banks have improved during recent years, the operating environment remains challenging. “Strategic Planning in an Evolving Earnings Environment” highlights the critical role bank corporate governance and strategic planning play in navigating a challenging operating environment. The article provides an informal perspective on the strategic planning process, and concludes with a discussion of strategic planning as it relates to important issues that bank boards and managements are dealing with today.

During the most recent financial crisis, many banks suffered significant losses on investment-grade securitizations thought to be low-risk investments. Following enactment of the Dodd-Frank Act, federal bank regulatory agencies issued regulations and guidance to reduce the likelihood of banks experiencing similar problems in the future. “Bank Investment in Securitizations: The New Regulatory Landscape in Brief” summarizes the most important new requirements related to investment in securitizations, including potential effects on capital, and discusses how an investment decision process can be structured to help a bank remain compliant with these new requirements.

This issue also includes our regular overview of recently released regulations and supervisory guidance.

We hope you find the articles in this issue to be informative and helpful. We encourage our readers to provide feedback and suggest topics for future issues. Please e-mail your comments and suggestions to SupervisoryJournal@fdic.gov.

Letter from the Director
Recent years have seen a steady improvement in the financial performance and condition of small FDIC-insured depository institutions. The improvement has been driven by reductions in the volume of nonperforming loans and a recovery in loan growth that recently has gathered momentum. Yet as every banker knows, the operating environment remains highly competitive and challenging. In the FDIC’s experience, the plans and strategies of bank management and the approach to managing risk are the most important determinants of a bank’s ability to generate sustainable earnings. External financial trends have an important influence on earnings, of course, but it is bank management that charts the course in the face of those trends and ultimately determines success.

This article starts with an informal perspective on strategic planning and concludes by discussing strategic planning in the context of issues bank boards and management are dealing with today. Strategic planning is a specific aspect of corporate governance that is of particular interest given the significant business decisions banks need to make regarding loan growth, asset-liability management, and other matters. The discussion is intended to provide food for thought, but should not be viewed as supervisory guidance. Select existing FDIC guidance on corporate governance, including strategic planning, is summarized in a text box at the end of this article.

Successful bank operations require sound decision-making by a bank’s board of directors and executive officers and effective control of operations; this is the subject matter of corporate governance. Corporate governance can be more or less formal depending on the size and complexity of the bank, but the effectiveness of governance is always a critical determinant of the long-term health of the bank.

Strategic planning involves setting the direction of the bank and the broad parameters by which it will operate. Doing this is a basic responsibility of boards of directors, with the assistance of executive officers. Indeed, setting the strategic objectives and future direction of the bank is a key theme running through FDIC guidance regarding corporate governance and is the initial step in a sound governance framework. For example, the *Pocket Guide for Directors* states that the board of directors should “…establish, with management, the institution’s long- and short-term business objectives, and adopt operating policies to achieve these objectives in a legal and sound manner.”

---

1 See https://www.fdic.gov/regulations/resources/director/pocket.html
2 See for example the Management and Earnings sections https://www.fdic.gov/regulations/safety/manual/
Often, banks will have a written strategic plan, but the importance of strategic planning goes beyond producing a piece of paper. Strategic planning can be viewed as a dynamic process for evaluating the bank’s current status, establishing appropriate business objectives, developing plans and risk tolerances, and ensuring policies and controls are in place to make sure the bank operates within the parameters established by the board. Such planning reflects an active and engaged board of directors.

There is no one right way to conduct strategic planning, but a prerequisite is a solid understanding by directors and officers of the current operating environment; the bank’s condition, risk exposure, and business model; and key opportunities and challenges. Such challenges could be external or could involve the bank’s own operational and risk management weaknesses, if applicable. Understanding the starting point can help ensure that planned initiatives are consistent with available expertise and resources. Management should also consider the potential risk impact, contingencies and unforeseen events when making strategic decisions, including the possibility that the economic environment may change unfavorably and unexpectedly. Effective planning processes cover at least a three-to-five year time horizon and provide for regular reviews of results to determine whether adjustments or other course corrections are needed.

An important aspect of the planning process is managing the tradeoff between risk and return. This tradeoff is relevant to many strategic decisions including those regarding loans, investments, asset-liability management and initiatives regarding non-interest income. Generally speaking, capital, earnings and staff expertise should have a reasonable correlation to the institution’s risk profile. This means, first, that banks must understand their own risk profile, including current credit risk and exposure to adverse future credit developments, asset-liability mismatches, and exposure to the potential for securities depreciation. Assessing risk involves not only understanding the bank’s loans, investments and deposits, but taking a macro view by considering possible adverse changes in the institution’s market area or to interest rates.

When evaluating risk-return tradeoffs, the next key question is whether the bank is positioned for sustained performance given its risk profile. Higher-risk profiles should be balanced by greater resources in
terms of capital and reserves, reasonably sustainable income, and risk management expertise. Managing to earnings targets without regard to risk would be inadvisable. For example, a bank with peer average capital ratios and a one percent return-on-assets (ROA), but extremely high risk in the loan portfolio, might not have sufficient earnings and capital support for its activities, while average capital ratios and a lower ROA might be more than adequate for a bank with a low and stable risk profile.

Another critical aspect of managing the tradeoff between risk and return is the use of risk limits and risk-mitigating strategies when limits are breached. As part of their oversight of management, a board of directors is expected to establish risk limits for the bank’s material financial activities, including loans and investments, interest rate risk, funding sources, and other matters. Risk limits can allow for exceptions with appropriate vetting and approval, but generally speaking the limits should be set so mitigating steps are expected when limits are breached.

None of this discussion should be taken to suggest that the FDIC expects elaborate, consultant-driven strategic planning documents every time a small bank wants to try something new. What is important is a clear focus on the bank’s core mission, vision, and values; solid understanding of the institution’s current risks; proper due diligence and resource allocation before expanding into new lines of business; and an objective, frequent, and well-informed follow-up process.

Bank examiners and bank boards and management must concern themselves with risk-management issues relevant to the long-run health of banks. Accordingly, there is significant overlap between the risk-management factors examiners review when rating a bank, and the types of issues an engaged bank management team should be considering as part of the planning process. The text box illustrates this idea in the context of how examiners rate the quality of earnings.
Rating Earnings

Knowing whether your earnings are adequate for current operations and sufficient to maintain capital and loan loss reserves going forward is an important responsibility for bank directors and management. Let’s consider two insured institutions, each with $500 million in total assets and each with an ROA of one percent. Earnings should be rated the same at each bank, right? Not necessarily. Let’s first look at how examiners rate earnings.

The Uniform Financial Institutions Rating System (UFIRS) was adopted by the Federal Financial Institutions Examination Council (FFIEC) on November 13, 1979, and was updated effective January 1, 1997. Under the UFIRS, each financial institution is assigned a composite rating based on an evaluation and rating of six essential components of an institution’s financial condition and operations. These component factors address the adequacy of capital, the quality of assets, the capability of management, the quality and level of earnings, the adequacy of liquidity, and the sensitivity to market risk. Evaluations of the components take into consideration the institution’s size and sophistication, the nature and complexity of its activities, and the institution’s risk profile.

The UFIRS states that the rating of the earnings component reflects not only the quantity and trend of earnings, but also factors that may affect the sustainability or quality of earnings. The quantity as well as the quality of earnings can be affected by excessive or inadequately managed credit risk that may result in loan losses, high administration costs, and require additions to the allowance for loan and lease losses (ALLL), or by high levels of market risk that may unduly expose an institution’s earnings to volatility in interest rates. The quality of earnings may also be diminished by undue reliance on non-recurring or volatile earnings sources, such as extraordinary gains on asset sales, nonrecurring events, or favorable tax effects. Future earnings may be adversely affected by an inability to forecast or control funding and operating expenses, improperly executed or ill-advised business strategies, or poorly managed or uncontrolled exposure to other risks.

According to the UFIRS, the rating of an institution’s earnings is based on, but not limited to, an assessment of the following evaluation factors:

- The level of earnings, including trends and stability.
- The ability to provide for adequate capital through retained earnings.
- The quality and sources of earnings.
- The level of expenses in relation to operations.
- The adequacy of the budgeting systems, forecasting processes, and management information systems in general.
- The adequacy of provisions to maintain the allowance for loan and lease losses and other valuation allowance accounts.
- The earnings exposure to market risk such as interest rate, foreign exchange, and price risks.

Now, let’s look at what Interagency Guidelines say about how a bank’s board and management should be evaluating earnings. The FDIC issued Part 364 of its Rules and Regulations to implement standards for safety and soundness required by Section 39 of the FDI Act. Appendix A to Part 364 – Interagency Guidelines Establishing Standards for Safety and Soundness – sets forth the safety-and-soundness standards that we use to identify and address problems at insured depository institutions before capital becomes impaired. Appendix A outlines procedures that banks should employ to periodically evaluate and monitor earnings to ensure earnings are sufficient to maintain capital and loan loss reserves. At a minimum, this analysis should:

- Compare recent earnings trends relative to equity, assets, or other commonly used benchmarks to the institution’s historical results and those of its peers;
- Evaluate the adequacy of earnings given the size, complexity, and risk profile of the institution’s assets and operations;
- Assess the source, volatility, and sustainability of earnings, including the effect of nonrecurring or extraordinary income or expenses;
- Take steps to ensure earnings are sufficient to maintain adequate capital and reserves after considering asset quality and growth rate; and
- Provide periodic earnings reports with adequate information for management and the board of directors to assess earnings performance.

Now, let’s return to our two $500 million banks that each have a one percent ROA, but this time, with a little more information.

The first bank’s ROA had been hovering at about 0.8 percent for several years, but increased due to income from a new program of high yielding, but high-risk lending the bank launched about a year ago. The new lending program has grown rapidly. The bank’s loan loss reserve has been dwindling due to increasing loan losses related to the program, and the capital ratio has been falling due to the growth. Also, the bank’s board has not placed limits on loan growth, and management has been unable or unwilling to forecast how large the high-risk loan portfolio will become.

The second bank has not changed its lending product line for a number of years and has grown steadily, maintaining around a one percent ROA during that time, including through several business cycles. Management and the bank’s board have recently decided to launch a new product line and have forecasted the effects on earnings, the loan loss reserve, and capital over the next three years. The board has placed limits on the size of the new product line and risk tolerance “circuit breakers” so new lending will stop if the income it produces isn’t sufficient to build the additional loan loss reserves and capital needed for the new activity.

Now, would you rate earnings the same at both banks? No, and here’s why. Although these are just thumbnails and we don’t have all the facts, the first bank appears to have some credit-risk issues and risk-management problems that would indicate earnings may be falling short of what they need to support operations and build capital and reserves. And, they don’t appear to be doing an adequate job of monitoring the adequacy of earnings, contrary to the expectations in Appendix A to Part 364. On the other hand, the second bank appears to have done a good job of maintaining earnings. Also, management’s decision to “look before they leap” into a new product shows they have considered the risk/return of the new strategy and have built in a contingency plan if it doesn’t work.

---

Navigating a changing environment

The current earnings environment brings opportunities and challenges to small banks’ management teams. Community banks’ earnings continue to recover from the effects of the financial crisis (see Chart 1). As of first quarter 2015, year-over-year earnings grew 16 percent for community banks, driven by a recovery in loan growth and ongoing improvements in asset quality. Loan balances in all major categories at community banks increased year-over-year as of first quarter 2015 (see Chart 2), and non-current loan rates continued to trend downward (see Chart 3).

Amid these positive developments, the earnings environment remains uncertain. Challenges include ongoing competitive pressure on net interest margin and non-interest income, the effects of a historically low interest-rate environment, and the risks posed by a potential future increase in interest rates. Given this challenging and ever-changing business environment, sound governance and planning are prerequisites for sustained profitability that can and should provide signposts for business decisions. In this section, we emphasize these points with reference to some of the critical strategic decisions small banks are facing today.

There is an old saying that “failing to plan is planning to fail.” One important lesson we learned from the financial crisis is that poor planning can harm institutions, their communities, and the financial system as a whole. Many financial institution failures were traced to management engaging in a new or expanded business line without adequate planning, controls, and

---

1 Data for charts 1, 2 and 3 are from the FDIC Quarterly Banking Profile https://www2.fdic.gov/qbp/index.asp
understanding of the risks related to the new activity.

One of the most important current strategic planning questions for small banks is how to participate in the recent renewal of loan growth. The increase in lending is a welcome development that in broad terms signals ongoing recovery from the crisis. It is appropriate that small banks contribute to this recovery and benefit from the opportunities it creates. At the same time, it is especially important for banks entering new areas of lending or considering significant expansion plans to do this pursuant to a prudent, diligently executed strategy. The business focus of many small banks on real estate lending, a lending sector whose performance has been highly cyclical, underscores the importance of prudent risk management of lending activities.

Strategic decisions regarding lending should be discussed in terms of the implications for the bank’s risk profile inherent in those decisions. For example, the bank may be considering pursuing a higher-yielding lending segment, but would need to carefully consider whether these loans are of a quality to assure either continued debt servicing or principal repayment. In other words, will the new lending segment contribute to sustainable earnings or have an unacceptably high risk of hurting the bank’s performance in the long term? Conversely, some lower-yielding lending segments may contribute more to earnings over time based on their lower incidence of credit loss.

Significant changes in lending activity are likely to require board-approved changes to the lending policy. Banks’ lending policies reflect strategic decisions about market area, underwriting standards, appropriate diversification, extent of planned growth and other matters. Important controls to implement the lending policy include, among other things, credit approval processes, ongoing credit monitoring and risk rating, management of exceptions, and handling of problem credits. The safety-and-soundness standards and Interagency Guidelines for Real Estate Lending Policies provide guidance on sound risk management and controls for the lending function.

The real-estate crises of the late 1980s and early 1990s, and the more recent crisis, provide striking examples of the importance of maintaining prudent risk management of lending activities. A good example is the experience of ADC lenders during the crisis. Studies conducted by the FDIC Office of Inspector General (OIG) based on Material Loss Reviews indicate that during the recent crisis, the level of ADC concentrations, the risk management of those concentrations, and the responsiveness to supervisory concerns where applicable, all mattered greatly in separating the survivors from those that failed.

---

8 See “Quality of Bank Earnings” in FDIC, Risk Management Manual of Examination Policies, page 5.1-6, for further discussion.

10 Information about the banking crisis of the 1980s and early 1990s can be found, for example, in Federal Deposit Insurance Corporation, History of the Eighties: Lessons for the Future, Federal Deposit Insurance Corporation, 1997.

11 The Inspector General of the appropriate federal banking agency must conduct a Material Loss Review when losses to the Deposit Insurance Fund from failure of an insured depository institution exceed certain thresholds. See http://www.fdicioig.gov/mlr.shtml for further details.
In describing the characteristics of a sample of ADC specialists that remained in satisfactory condition between year-end 2007 and April 2011, a 2012 OIG report stated, “Ultimately, the strategic decisions and disciplined, values-based practices and actions taken by the Boards and management helped to mitigate and control the institutions’ overall ADC loan risk exposure and allowed them to react to a changing economic environment.” In particular, the report stated that ADC specialists that remained in satisfactory condition throughout the period were more likely to have implemented more conservative growth strategies, relied on core deposits and limited net non-core funding dependence, implemented prudent risk-management practices and limited speculative lending, loan participations, and out-of-area lending, and maintained stable capital levels and access to additional capital if needed.

Recent improvements in small banks’ earnings highlight the importance of maintaining an adequate ALLL. ALLL ratios at small banks currently are trending downward with provisions near historic lows. The ALLL, which is intended to measure probable credit losses on loans or groups of loans, is one of the most significant management estimates in an institution’s financial statements. Moreover, the processes for determining the ALLL are an important part of the overall risk management of the loan portfolio and should generate important information for the board and senior management about financial conditions and trends facing the institution. The processes include regular and consistent risk analysis, effective loan review that identifies and addresses problem assets in a timely manner, prompt charge-off of loans or portions of loans that are uncollectible, and a regular review of the ALLL methodology by a party independent of the credit approval and ALLL estimation process. This review by a second set of eyes should help ensure the ALLL methodology is credible and not influenced by a desire to bolster reported earnings.

Another important area of strategic focus is the response to the historically low interest rate environment and preparedness for potential future increases in interest rates. The interest rate environment has been challenging for small banks’ earnings during the post-crisis period and poses strategic challenges for bank management teams going forward. Dimensions of the issue include the downward trend in NIM and increase in maturities of assets, the changing composition of liabilities, and the potential impact of a rising-rate environment on interest income and expense and the value of investment portfolios. The possibility of interest rates transitioning away from historically low levels raises strategic questions about preparedness and highlights the importance of the what-if questions bankers can and should be posing to their interest rate risk-management staff and systems.

Supervisory guidance and technical resources on interest rate risk are readily available to every small bank. The last issue of Supervisory Insights, for example, was devoted to practical advice on interest rate risk management for small banks. Perhaps the most important advice is that planning for the potential impact of rising

---

13 Ibid, page iii.
interest rates is too important to be left entirely to those who run the interest rate risk-management systems and models. Senior management and the board should actively question how the bank would fare under rising interest rates, including what would happen if depositors prove more rate-sensitive than expected, the extent of securities depreciation that would be expected, and whether risk-mitigation steps are needed.

An intensely competitive financial services marketplace continues to place ongoing pressure on non-interest income. Pressures on interest and non-interest income, in turn, put pressure on banks to reduce overhead expense. Consequently, many small institutions would likely give strategic attention to opportunities that might arise to increase non-interest income or reduce non-interest expense. As a general matter, banks should be thorough in their due diligence with regard to planned new activities to increase fee or other non-interest income, including identifying and vetting in advance the potential risks of the activity and the expertise and resources needed for success. Expense reductions should be carefully reviewed to ensure they do not compromise franchise value or the ability to conduct important functions in a safe-and-sound manner and in compliance with applicable laws and regulations. As a general rule, even more care is warranted when the bank has been approached with unsolicited opportunities to boost income or cut expense.

Finally, we recognize that strategic planning choices that are straightforward in principle may not be easy to implement when the operating environment changes continuously and sometimes dramatically. A good example of this is cybersecurity risk, the importance of which has become increasingly evident over time. We have always expected business continuity and disaster recovery considerations to be incorporated in an institution’s business model. However, in addition to preparing for natural disasters and other physical threats, continuity now also means preserving access to customer data and the integrity and security of that data in the face of cyberattacks.

For this reason, the FDIC encourages banks to practice responses to cyber risk as part of their regular disaster-planning and business-continuity exercises. They can use the FDIC’s Cyber Challenge program, which is available on our public web site at www.fdic.gov.15 Cyber Challenge was designed to encourage community bank directors to discuss operational risk issues and the potential impact of information technology disruptions. The FDIC also works as a member of the FFIEC to implement actions to enhance the effectiveness of cybersecurity-related supervisory programs, guidance, and examiner training. The FFIEC recently released a Cybersecurity Assessment Tool to help institutions identify risks and assess their cybersecurity preparedness.16

15 https://www.fdic.gov/regulations/resources/director/technical/cyber/purpose.html
16 The Assessment and other resources are available at https://www.ffiec.gov/cybersecurity.htm
Conclusion

Banking is an intensely competitive business that is subject to significant and unexpected economic change. The return of loan growth and an uncertain future interest-rate environment pose important strategic questions for bank directors and executive managers. In this challenging environment, a disciplined approach to identifying opportunities and risks, planning for the achievement of goals within acceptable risk tolerances, and staying on course with an appropriate control framework are pre-requisites for success. Long-standing corporate governance principles, sensibly applied based on the size and complexity of operations, are the starting point for an engaged bank management team to achieve these goals.

Policy staff of the
Division of Risk Management
Supervision
Corporate governance broadly refers to the set of relationships, policies and processes that provide strategic direction and control in a company. For a bank, corporate governance determines the effectiveness and safety and soundness of operations. The appropriate scope and formality of governance depends on the volume, scope, and complexity of activities. For a small, non-complex bank, governance does not necessarily need to be complicated: what is needed is a board and senior management that are fully engaged in understanding and managing the bank and its risks.

The governance responsibilities of banks’ managements and boards of directors are different. The UFIRS, effective January 1, 1997, states: “Generally, directors need not be actively involved in day-to-day operations; however, they must provide clear guidance regarding acceptable risk exposure levels and ensure that appropriate policies, procedures, and practices have been established. Senior management is responsible for developing and implementing policies, procedures, and practices that translate the board’s goals, objectives, and risk limits into prudent operating standards.” Directors and officers may work toward a common goal, but ultimately the board is responsible for monitoring management and business operations.

The duties and responsibilities of directors of state non-member banks are summarized in the FDIC’s Pocket Guide for Directors and the Statement Concerning the Responsibilities of Bank Directors and Officers. These include important common law duties of loyalty and care. The Pocket Guide for Directors also indicates that bank boards should “establish, with management, the institution’s long- and short-term business objectives, and adopt operating policies to achieve these objectives in a legal and sound manner.” This critical planning function is discussed further below. Among the other duties of the board specifically described in the Pocket Guide are monitoring bank operations to ensure they are controlled adequately and are in compliance with laws and policies, keeping informed of the activities and condition of the institution and its operating environment, appointing qualified management, and supervising management. Supervising management includes, at a minimum, establishing policies regarding loans, investments, capital planning, profit planning and budget, internal audit and controls, and compliance, among other things; monitoring implementation of board-approved policies; providing for third-party review and testing of compliance with policies; heeding supervisory reports and recommendations; and avoiding preferential transactions.

An authoritative source of guidance on bank governance is the Interagency Guidelines Establishing Standards for Safety and Soundness. Section 39 of the FDI Act required each federal banking agency to establish certain safety-and-soundness standards for insured depository institutions. These interagency guidelines are detailed in Appendix A to Part 364 of the FDIC Rules and Regulations, published in 1995, and provide institutions with supervisory expectations for internal controls and information systems, internal audit, loan documentation, credit underwriting, interest-rate exposure, asset growth, asset quality, earnings and compensation, fees, and benefits.

The safety-and-soundness standards provide a framework for sound risk management, corporate governance, and the supervision of operations for many of the most important areas of the bank. These standards are intended to guide risk-management practices and identify emerging problems and deficiencies before capital becomes impaired. Bank directors should be aware of these standards and ensure that bank management has established appropriate risk-management procedures and policies for each area.

Bank Investment in Securitizations: The New Regulatory Landscape in Brief

The recent financial crisis provided a reminder of the risks that can be embedded in securitizations and other complex investment instruments. Many investment grade securitizations previously believed by many to be among the lowest risk investment alternatives suffered significant losses during the crisis. Prior to the crisis, the marketplace provided hints about the embedded risks in these securitizations, but many of these hints were ignored. For example, highly rated securitization tranches were yielding significantly greater returns than similarly rated non-securitization investments. Investors found highly rated, high-yielding securitization structures to be “too good to pass up,” and many investors, including community banks, invested heavily in these instruments. Unfortunately, when the financial crisis hit, the credit ratings of these investments proved “too good to be true;” credit downgrades and financial losses ensued.

In the aftermath of the financial crisis, interest rates have remained at historic lows, and the allure of highly rated, high-yielding securitization structures remains. Much has been done to mitigate the problems experienced during the financial crisis with respect to securitizations. Congress responded with the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), and regulators developed and issued regulations and other guidance designed to increase investment management standards and capital requirements.

The gist of these new requirements is simple: banks should understand the risks associated with the securities they buy and should have reasonable assurance of receiving scheduled payments of principal and interest. This article summarizes the most pertinent of these requirements and provides practical advice on how the investment decision process can be structured so the bank complies with the requirements.

The guidance and regulations applicable to bank investment activities reviewed in this article are:

The OCC's 12 CFR, Parts 1, 5, 16, 28, and 160. Alternatives to the Use of External Credit Ratings in the Regulations of the OCC

This OCC regulation implemented Section 939A of the Dodd-Frank Act, which required bank regulators to remove references to credit ratings in regulations pertaining to investments and substitute alternative standards of creditworthiness. The final rule was published in the Federal Register on June 13, 2012 and became effective on January 1, 2013. This rule did not drastically shift prescribed bank practice, but rather clarified examiners’ intent to focus on pre-purchase analysis and credit monitoring. This subject was addressed in a Supervisory Insights article titled, “Credit Risk Assessment of Bank Investment Portfolios.”

Prior to the changes implemented by the Dodd-Frank Act, the top four rating bands assigned by nationally recognized statistical ratings organizations for fixed-income securities were generally considered “investment grade” by bank regulators. With some exceptions outlined below, bank management is now required to perform appropriate due diligence, and conclude that the risk of default is low and the issuer has adequate capacity to pay the principal and interest as scheduled. The rule also requires banks to understand and evaluate the risks of investment securities. For example, the rule states, “Fundamentally…banks should not purchase securities for which they do not understand the risks.”

The OCC's Guidance on Due Diligence Requirements to Determine Eligibility of an Investment

Concurrent with the final rule, the OCC published guidance on due diligence requirements. The OCC guidance states that the following investment securities are generally not subject to the investment grade determination:

- U.S. Treasury obligations;
- U.S. agency obligations;
- Municipal government general obligations; and
- Municipal revenue bonds—when the investing bank is considered well-capitalized.

For these types of securities, there is no requirement for the investing bank to determine that default risk is low and the issuer has capacity to make scheduled payments. Management is required to assess the potential risks in the pre-purchase analysis and ongoing monitoring. For municipal general obligation bonds and municipal revenue bonds (in the case of well-capitalized banks), an initial credit assessment and regular credit review are required, but the review is not required to meet the test of determining low default risk and adequate payment capacity. Other types of municipal bonds such as Certificates of Participation (COPs) and Tax Increment Financing (TIFs) are neither general obligations nor revenue bonds and, consequently, banks investing in these instruments are required to determine that default

---

risk is low and payment capacity is adequate in the pre-purchase analysis and ongoing monitoring. The OCC’s guidance stipulates that bank management must understand the inherent risks posed by a security before investing. Specifically, the guidance elaborates on expectations of pre-purchase analysis of structured investments, and declares it unsafe and unsound to purchase a complex security without understanding the structure and analyzing the performance under stressed scenarios. Management’s analysis of a particular investment should be documented; the type of documentation varies with the complexity of the investment instrument. For example, a medium-term note with no call features may be evaluated with comparatively less documentation, while a mezzanine class of a collateralized loan obligation would require substantial documentation to demonstrate an understanding of the instrument and its anticipated performance in stressed scenarios.

The Supervisory Insights article mentioned above addresses this subject in greater depth.

---

### The FDIC’s Part 362, Activities of Insured State Banks and Insured Savings Associations

This rule was published December 1, 1998 and became effective January 1, 1999. The FDIC has published various amendments to the regulation since its original effective date, but the general theme of the rule remains the same: to restrict, without the prior approval of the FDIC, insured state banks and savings associations from engaging in activities and investments that are not permissible for national banks or federal savings associations, respectively. Generally, in applying Part 362, the FDIC considers regulatory restrictions imposed by the OCC on national banks and federal savings associations to apply to state banks and state savings associations engaged in the same activities and investments. As such, provisions in the OCC’s regulation on credit ratings applicable to national banks also apply to state banks. Similarly, provisions in the OCC’s regulation on credit ratings applicable to federal savings associations also apply to state savings associations.

---

The most recent update to this rule specifically applies the OCC’s rule on credit ratings to state savings associations’ investments in corporate debt. Specifically, state thrifts are prohibited from acquiring a corporate debt security before determining the issuer has adequate capacity to repay the debt according to the original terms. The rule requires ongoing periodic determinations of the issuer’s ability to perform according to the terms of the security; the rule applies to corporate debt purchased before the effective date.

**The Basel III Capital Rule**

The FDIC issued an interim final rule on September 10, 2013 and later issued a final rule on April 8, 2014. For the risk-based capital requirements of most banks, the final rule was effective on January 1, 2015; banks applying the advanced approaches risk-based capital framework were required to comply with certain aspects of the final rule (including the advanced approaches risk-based capital requirements) by January 1, 2014. The FDIC’s Part 324 implements changes required by the Dodd-Frank Act and elements of the international agreement titled “Basel III: A Global Regulatory Framework for More Resilient Banks and Banking Systems” (December 2010, as revised June 2011). This rule is generally known as the “Basel III Capital Rule.”

The rule addresses capital calculations and assigns risk weights to bank assets and exposures used to determine capital ratios. The supplementary information accompanying the rule explains that a securitization is a credit exposure that results from separating an underlying exposure into at least two tranches with differing levels of seniority. Simply stated, if there is tranching of credit risk, the exposure is a securitization. The rule uses the term “exposure” rather than “asset” because the rule addresses on- and off-balance sheet risks; “exposure” encompasses both. The rule’s impact on operational requirements for securitization exposures of banks is contained in Section 324.41(c), which covers due diligence requirements for securitization exposures.

Section 324.42 of the rule states, in effect, that the FDIC (or other applicable bank regulatory agency) may require a supervised institution to assign a 1,250 percent risk weight to a securitization exposure if the institution does not understand the features of a securitization exposure that would materially affect its performance. The nature of the institution’s analysis in this respect “must be commensurate with the complexity of the securitization exposure and the materiality of the exposure in relation to its capital.” Assigning a 1,250 percent risk weight with an eight percent capital requirement would have the economic effect of requiring the bank to hold one dollar of capital for every dollar invested in that particular investment security.

Consider a $1 million investment in the mezzanine tranche of a residential mortgage-backed security (MBS). Assume the underlying loans are exhibiting no significant financial stress, and the subordinate tranche reasonably supports the mezzanine tranche. The exact risk weighting is a function of either the simplified supervisory formula approach
(SSFA) or the “gross up approach.” For additional information on the SSFA and a calculation tool, consult Financial Institution Letter, 7-2015, (https://www.fdic.gov/news/news/financial/2015/fil15007.html). The nuances of the calculation are not the focus of this article; this example will use a 150 percent risk weight—a plausible risk weight for a mezzanine tranche. Applying a 150 percent risk weight and an eight percent capital requirement results in a capital charge of $120,000 (150 percent risk weight * $1 million investment * 8 percent capital requirement = $120,000).

Failing to meet the due diligence requirements described above would force the capital charge to $1 million (1,250 percent risk weight * $1 million investment * 8 percent capital requirement = $1 million).

The FDIC’s Part 351, Prohibitions and Restrictions on Proprietary Trading and Certain Interests in, and Relationships with, Hedge Funds and Private Equity Funds

The FDIC’s Part 351 was issued on January 31, 2014, and implements Section 619 of the Dodd-Frank Act. The rule is widely known as the Volcker Rule. Among other things, the Volcker Rule prohibits banks from investing in or sponsoring hedge funds and private equity funds; the rule refers to these as “covered funds.” The rule defines a covered fund as an issuer that is exempt from registration as an investment company under the Investment Company Act of 1940 (often referred to as the “40 Act”) by way of Section 3(c)(1) or Section 3(c)(7) of the ‘40 Act. Section 3(c)(1) and 3(c)(7) exemptions are applicable when the number of investors is limited and the investors meet either an income test or a net worth test, respectively. Banks, thrifts, and bank holding companies are typically considered qualified investors under 3(c)(7). The effective date of the final rule was April 1, 2014; however, banking entities generally had until the end of the conformance period, July 21, 2015, to comply with most provisions of the Volcker Rule. However, the compliance deadline for investments in and relationships with covered funds that were in place prior to December 31, 2013 has been extended to July 21, 2016, and the Board of Governors of the Federal Reserve System has publicly indicated that it anticipates further action to extend the conformance period for these covered funds to July 21, 2017.

The Volcker Rule specifically excepted loan securitizations from the definition of covered funds. As a result, many traditional securitizations held by banks will be excepted from the Volcker Rule as loan securitizations, provided that the underlying assets are limited to loans and certain other credit-related assets. However, introducing even a minimal allocation to equities, bonded debt, commodities, or other non-qualifying assets could result in the securitization investment being considered a restricted covered fund investment. As such, banks need to understand the assets that underlie the loan securitizations in which they invest.
The Investment Decision: Merging the Various Rules Into a Decision Process

Although each rule described above has a distinct objective, one common element is required for complying with each rule: understanding the key features and risks of the investment.

- Complying with the OCC’s Rule on Alternatives to Credit Ratings and the FDIC’s Part 362 requires a determination that default risk is low and the issuer has the capacity to perform according to the terms of the debt.

- Complying with the Basel III capital rule for securitizations requires an understanding of the features of a securitization exposure that would materially affect the performance.

- Determining the Basel III risk weighting for a securitization tranche requires knowledge of the tranche’s specific position in the cash flow waterfall of the securitization and the performance metrics of the underlying loans (all of which is available initially from the offering circular or prospectus and on an ongoing basis from servicer or trustee reports).

- Complying with the Volcker Rule requires knowledge of the investment’s registration status and asset composition. If the investment is exempt from registration under the Investment Company Act of 1940, management must determine which section was relied upon for exemption. If Section 3(c)(1) or 3(c)(7) were relied upon, the investment is prohibited by the Volcker Rule unless the underlying assets consist only of loans and other qualifying assets.

In each of these cases, understanding the structure and risk characteristics of the investment is required to comply with the rules, and the decision to invest should be supported by appropriate documentation as discussed below.

Demonstrating an understanding of an investment security requires a knowledge of the details of the instrument (purpose, rate, index/margin for adjustable rate issues, maturity, possible extensions, payments in kind, allowable payment deferrals, repayment source, etc.) and consideration of risk factors that could adversely affect performance. A thorough analysis of the performance resulting from interest rate environments ranging from down 300 - 400 basis points to up 300 - 400 basis points is appropriate. (In the present low-rate environment, down 300 - 400 basis points is not a relevant scenario for many securities). The analysis should consider the possibility of a deterioration in the credit quality of the issuer(s) and downturns in the industry and the economy. Different types of securities warrant different analyses. Risks should be considered in light of the bank’s portfolio risk. For instance, a single investment in a collateralized loan obligation (CLO) may not present a concentration of risk; however, when the investment is considered alongside other CLO investments in the bank’s portfolio, a concentration in a single name underlying different CLOs may arise. The plausible adverse scenarios should be considered, and management should be confident that the security’s performance is not unduly exposed to plausible adversities.
Often the window to make an investment decision is small; however, urgency to act does not eclipse the need for a prudent evaluation. The overarching question can be answered immediately: “Is bank management familiar with this investment class?” If a bank investment officer is not familiar with the proposed security, the immediate decision should be to defer the investment decision until management has developed an understanding of the security and its associated risks. These instances should be rare because the bank’s investment policy should connect the expertise of management with the permissible investment strategies. If the bank’s board of directors adopts a new investment strategy for its investment policy, the board should ensure the management team possesses the expertise to execute the strategy. In addition, management can construct a decision framework that implements the board’s investment policy and streamlines the investment selection process. One example is an investment’s expected average life. If the board’s investment policy permits mortgage-backed securities, the policy should also address maximum average expected life of the security and set tolerances for variation in the average life. If the policy requires an investment’s average life to be less than ten years in the current interest rate environment and to extend no more than five years in all interest rate scenarios ranging from down four percent to up four percent, that metric could be incorporated into the decision framework.

Some banks use third-party analytics as inputs to their investment decision process. Regulatory guidance regarding due diligence specifies that management may delegate analysis to third parties, but cannot delegate responsibility for decision-making. Management should be satisfied that third-party providers are independent (the broker selling the security is not independent), reliable, and qualified. Projections and analysis from third-party providers should be subjected to hindsight analysis. For example, did the analyst’s projected changes in average life prove to be accurate when a change in interest rates was actually observed? The board of directors should review the decision-making process and ensure that the process adequately implements the investment policy.

Presuming the bank’s investment policy permits the proposed investment, and management understands the basic structure and risks of the investment, the next step is to determine whether the investment requires an investment grade determination. If the investment is issued by the U.S. Treasury or an agency of the U.S. government, an investment grade determination is not required, and the decision can proceed to determining the suitability of the investment for the bank. Although the OCC’s regulation on Alternatives to the Use of Credit Ratings does not require municipal general obligation bonds to satisfy the investment grade criteria to be eligible for investment, the guidance does require an initial credit assessment and ongoing reviews consistent with the risk characteristics of the bond and the overall risk of the portfolio.
If the investment is not a U.S. Treasury, agency, or municipal general obligation bond, or municipal revenue bond (in the case of well-capitalized banks), the next concern should be determining whether the investment is a securitization. Recall that, for purposes of the Basel III Capital Rule, any tranching of credit risk results in a securitization. If the proposed investment is not a securitization, the decision can move to determining default risk and ability to perform. If the investment is a securitization, a reasonable first question would be, “Is the issue registered with the SEC as an investment company?” If so, the decision-maker can determine whether the instrument is investment grade. If the issue is not registered, the next question should be, “What section of the ‘40 Act is invoked to avoid registration?” If either Section 3(c)(1) or 3(c)(7) is used, the investment may be a covered fund under the Volcker Rule. The next step is to assess the underlying assets. If the securitization consists entirely of loans, it is not considered a covered fund for purposes of the Volcker Rule. If any asset class other than loans or other qualifying assets is represented, the security may be deemed a covered fund in which case it would be a restricted investment under the Volcker Rule.

Presuming the previous determinations deem the security acceptable to this point, the analysis can move to judging the default risk and the issuer’s capacity to perform according to the stated terms. Regulatory guidance describes “key factors” to consider when gauging credit risk of corporate bonds, municipal bonds, and structured securities. An example of the type of analysis that could be conducted was described in the Supervisory Insights article mentioned above. Finally, periodic reviews are required over the life of the investment. The frequency and intensity of the review should be appropriate in light of the risk posed by the specific investment and overall risk of the bank’s portfolio.

An overview of the information contained in this article regarding the pre-purchase analysis of potential securitization investments is contained in the accompanying flow chart (see page 11), “Pre-purchase Considerations for Prospective Securitization Investment.” A footnote to the flow chart refers to the technical assistance available from the FDIC regarding identifying permissible vs. impermissible investments under the Volcker Rule, and calculating securitization capital requirements using the SSFA.

---

4 Ibid
Pre-purchase considerations for prospective securitization investment:

Step 1: Is the securitization a permitted investment under the Volcker Rule?*

Does the securitization rely on the exclusions contained in sections 3(c)(1) or 3(c)(7) of the Investment Company Act of 1940?*

Yes

Does the securitization qualify for a loan securitization exemption under Section _10(c)(8) of the Volcker Rule?*

No

Does the securitization qualify for any other exemption contained in the Volcker Rule?*

No

Do not invest.

Yes

Step 2: Do you have a comprehensive understanding of the securitization?

Have you performed the proper due diligence to attain a comprehensive understanding of the features of the securitization exposure that would materially affect the performance of the exposure and to determine if the securitization is investment grade?¹

No

Do not invest.

Yes

Step 3: Determine regulatory capital requirement.

Apply either the SSFA or the Gross-Up approach to determine risk weight.²

Alternatively, may apply a 1,250% risk weight.³

Yes

*Technical assistance in identifying permissible vs. impermissible investments under the Volcker Rule is available on the FDIC’s website or by contacting CapitalMarkets@fdic.gov.

¹ Due diligence requirements can vary by security type. For example, an investment grade determination is generally not required for securities issued or guaranteed by the U.S. Treasury or an Agency of the U.S. government, municipal general obligation bonds or, if your bank is well-capitalized, municipal revenue bonds. See OCC Guidance on Due Diligence Requirements.

² A SSFA Securitization Tool is available on the FDIC’s website to assist institutions that use the SSFA approach to calculate the applicable risk weights for securitization exposures.

³ A 1,250% risk weight may be required for existing security holdings where an institution cannot demonstrate a comprehensive understanding of the features of the securitization exposure that would materially affect the performance of the exposure.
Documenting Analysis

Demonstrating adherence to the various rules will require documentation, but the documentation is no more than that required to effectively execute management’s responsibilities to acquire and monitor the bank’s investments. Management must demonstrate an understanding of the relevant risks, and, in the case of a securitization, of the features that would materially affect the performance of the investment. Management must consider the impact that changes in average life will have on the results realized on an investment. Realized returns on mortgage-backed securities (MBS) can be particularly sensitive to changes in average life. The extreme examples are “principal-only MBS” and “interest-only MBS.” Extending the average life of a principal-only MBS can drastically erode the realized return. Shortening the life of an interest-only MBS can result in losses. To a lesser degree, every MBS purchased at a premium or discount is subject to similar extension or acceleration risk.

A critical pre-requisite to understanding the risks and features of any given investment is being aware of them. The most authoritative source of this information is the original offering document. In the case of registered corporate bonds, it is a Prospectus; for municipal bonds it is an Official Statement; for securitizations exempt from registration, it is an Offering Circular. The offering document will describe in detail the structure of the security and the known risks confronting it. Financial statements are required to determine capacity to perform for corporate bonds and municipal bonds. For structured investments, the periodic trustee reports are required to adequately monitor the investment’s performance. The same document is required to determine whether the issue complies with the Volcker Rule and to gather the necessary data to risk weight the asset.

Collectively, the rules described in this article call for the same documentation that prudent investment management requires. Management may rely on additional documentation or third-party research to support the decision to purchase, retain, or sell a particular investment. Examples are indentures, pooling and servicing agreements, special servicer reports, third-party research, and analytical services. Third-party research lacking independence, such as research authored by the broker selling the security, should be verified with independent sources. All documentation should be included in the investment file along with evidence that management has weighed the information when making a decision. When documentation is incomplete, examiners may cite the deficiency in the examination report on the schedule of “Assets with Credit Data or Collateral Documentation Exceptions.” If acceptable credit quality is not evident, examiners may determine a security, or portfolio of securities, is subject to Adverse Classification. If warranted, the deficiency may be included on the “Examination Conclusions and Comments” page or the “Risk Management Assessment” page. Deficient documentation practices, and/or inadequate credit quality, if sufficiently material, may affect the Asset Quality rating and the Management rating. A poor performing securities portfolio can erode the other rating elements as well.
Conclusion

The adversity of the financial crisis has forced investors and regulators from a comfortable perch of relying on credit ratings. Regulators recognize that credit judgment and analytical talent have long existed in successful banks; the rules discussed in this article remind bank boards of directors to exercise similar credit judgment and analytical skill with respect to the bank’s investment portfolio. Regulators crafted rules to establish standards of evaluation and documentation. Bank boards and managers are expected to implement prudent practices and make well-informed investment decisions that can be reasonably forecasted to withstand inevitable adversities such as deteriorating sectors, general economic downturns, and adverse interest rate movements.

<td><strong>Federal Bank Regulatory Agencies Finalize Revisions to the Capital Rules Applicable to Advanced Approaches Banking Organizations (PR-51-2015, June 16, 2015)</strong></td>
<td>The federal bank regulatory agencies finalized revisions to the regulatory capital rules adopted in July 2013. The final rules apply only to large, internationally active banking organizations that determine their regulatory capital ratios under the advanced approaches rule (generally those with at least $250 billion in total consolidated assets or at least $10 billion in total on-balance sheet foreign exposures). The agencies published changes to the rules affecting these organizations on December 18, 2014, and the final rules adopt these changes substantially as proposed.  See <a href="https://www.fdic.gov/news/news/press/2015/pr15051.html">https://www.fdic.gov/news/news/press/2015/pr15051.html</a></td>

<td>Agencies Issue Final Standards for Assessing Diversity Policies and</td>
<td>Federal financial institution regulatory agencies issued a final interagency policy statement establishing joint standards for assessing the diversity policies and practices of the entities they regulate. Section 342 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act) requires the federal financial institution regulatory agencies to establish an Office of Minority and Women Inclusion (OMWI) at each agency to be responsible for all matters relating to diversity in management, employment, and business activities. The Dodd-Frank Act also instructed each OMWI director to develop standards for assessing the diversity policies and practices of the agencies’ regulated entities. See <a href="https://www.fdic.gov/news/news/press/2015/pr15047.html">https://www.fdic.gov/news/news/press/2015/pr15047.html</a></td>

<td>FDIC Encourages Institutions to Consider Customer Relationships on a Case-By-Case Basis (PR-9-2015, FIL-5-2015, January 28, 2015)</td>
<td>The FDIC is encouraging supervised institutions to take a risk-based approach in assessing individual customer relationships, rather than declining to provide banking services to entire categories of customers without regard to the risks presented by an individual customer or the financial institution’s ability to manage the risk. Financial institutions that properly manage customer relationships and effectively mitigate risks are neither prohibited nor discouraged from providing services to any category of customer accounts or individual customers operating in compliance with applicable laws. FDIC examiners must provide notice in writing for any case in which an institution is directed to exit a customer relationship. The FDIC has a new, dedicated toll-free number and email box for the Office of the Ombudsman for institutions concerned that FDIC personnel are not following FDIC policies on providing banking services. See <a href="https://www.fdic.gov/news/news/financial/2015/fil15005.html">https://www.fdic.gov/news/news/financial/2015/fil15005.html</a></td>

<tr>
<td>Agencies Release Public Sections of Resolution Plans (PR-4-2015, January 15, 2015)</td>
<td>The FDIC and the FRB made available the public portions of resolution plans for firms with less than $100 billion in qualifying nonbanking assets, as required by the Dodd-Frank Act. This generally is the second set of resolution plans submitted for this group. The public portions of the resolution plans, as well as previously filed resolution plans, are available on the FDIC and FRB web sites. See <a href="https://www.fdic.gov/news/news/press/2015/pr15004.html">https://www.fdic.gov/news/news/press/2015/pr15004.html</a></td>

<tr>
<td>Agencies Announce Additional EGRPRA Outreach Meetings (PR-3-2015, January 14, 2015)</td>
<td>Federal bank regulatory agencies will hold an outreach meeting on February 4, 2015, at the Federal Reserve Bank of Dallas as part of their regulatory review under the EGRPRA. The meeting is the second in a series of outreach sessions the FDIC, OCC, and FRB are holding throughout the country. See <a href="https://www.fdic.gov/news/news/press/2015/pr15003.html">https://www.fdic.gov/news/news/press/2015/pr15003.html</a></td>

<td>FDIC Issues Guidance On Identifying, Accepting, and Reporting Brokered Deposits (FIL-2-2015, January 5, 2015)</td>
<td>The FDIC issued guidance in the form of Frequently Asked Questions to promote consistency by insured depository institutions in identifying, accepting, and reporting brokered deposits. The FDIC has explained the requirements for identifying, accepting, and reporting brokered deposits in published advisory opinions and in the Study on Core Deposits and Brokered Deposits (issued in July 2011). However, questions continue to arise about whether certain types of deposits are considered brokered deposits. This FAQ document addresses identifying brokered deposits, accepting deposits, listing services, interest rate restrictions, and other brokered deposit-related matters. See <a href="https://www.fdic.gov/news/news/financial/2015/fil15002.html">https://www.fdic.gov/news/news/financial/2015/fil15002.html</a></td>

<tr>
<td>Federal Bank Regulatory Agencies Issue Guidance on Consolidated Reports of Condition and Income (FIL-1-2015, January 2, 2015 / FIL-3-2015, January 6, 2015)</td>
<td>The federal bank regulatory agencies issued a guide to submitting the December 31, 2014 Call Reports. This reminder stressed specific year-end guidelines, such as reporting the amount of preferred deposits (Memorandum item 1.e of Schedule RC-E) and information about bank involvement with reverse mortgages (Memorandum item 15 of Schedule RC-C, part I, and item 1.a of Schedule RC-L). See <a href="https://www.fdic.gov/news/news/financial/2015/fil15001.html">https://www.fdic.gov/news/news/financial/2015/fil15001.html</a></td>

<tr>
<td>Banking Agencies’ Statement Regarding The Basel Committee’s Consultative Paper “Revisions to the Standardized Approach for Credit Risk” (PR-113-2014, December 22, 2014)</td>
<td>The Basel Committee on Banking Supervision published a consultative paper entitled Revisions to the Standardized Approach for Credit Risk. These proposed revisions are intended to apply primarily to large, internationally active banking organizations and not community banking organizations. A key objective of the paper is to seek comment on preliminary alternatives to internal models and external credit ratings for calculating risk-weighted assets. See <a href="https://www.fdic.gov/news/news/press/2014/pr14113.html">https://www.fdic.gov/news/news/press/2014/pr14113.html</a></td>

<tr>
<td>Agencies Release Annual CRA-Asset Size Threshold Adjustments for Small and Intermediate Small Institutions (PR-111-2014, December 19, 2014)</td>
<td>The federal bank regulatory agencies announced the annual adjustment to the asset-size thresholds used to define small bank, small savings association, intermediate small bank, and intermediate small savings association under the Community Reinvestment Act (CRA) regulations. Financial institutions are evaluated under different CRA examination procedures based on their asset-size classification. Those meeting the small and intermediate small asset-size threshold are not subject to the reporting requirements applicable to large banks and savings associations. See <a href="https://www.fdic.gov/news/news/press/2014/pr14111.html">https://www.fdic.gov/news/news/press/2014/pr14111.html</a></td>

<tr>
<td>FDIC Issues Guidance for the Resolution Plans of Large Banks (PR-109-2014, December 17, 2014)</td>
<td>The FDIC issued guidance for resolution plans that insured depository institutions with assets greater than $50 billion must submit periodically to the FDIC. These plans are required by an FDIC rule approved in January 2012 and complement those required from certain entities, such as covered bank holding companies under the Dodd-Frank Act. The FDIC rule requires each covered institution to provide a resolution plan that should enable the FDIC as receiver under the Federal Deposit Insurance Act to resolve the institution in an orderly manner that enables prompt access of insured deposits; maximizes the return from the failed institution’s assets; and minimizes losses realized by creditors and the Deposit Insurance Fund. See <a href="https://www.fdic.gov/news/news/press/2014/pr14109.html">https://www.fdic.gov/news/news/press/2014/pr14109.html</a></td>
