RE: Regulatory Capital Rules: (1) Regulatory Capital, Implementation of Basel III, Minimum Regulatory Capital Ratios, Capital Adequacy, Transition Provisions, and Prompt Correction Act: RIN 3064-AD95; and (2) Standardized Approach for Risk-Weighted Assets, Market Discipline and Disclosure Requirements: RIN 3064-AD96

Dear Mr. Feldman:

River Valley Bank ("RV") is a $1billion asset institution with 16 offices located in North Central Wisconsin and the Upper Peninsula of Michigan. Our home office is located in Wausau, Wisconsin. As a community banker with RV, I am extremely concerned over the broad approach taken by the Federal Deposit Insurance Corporation (FDIC), together with Board of Governors of the Federal Reserve System (FRB) and Office of the Comptroller of the Currency (OCC), (collectively, the Agencies) to impose a "one-size-fits-all" regulatory capital scheme despite the fact that the industry believed the Basel III proposals were intended for the very large, complex international institutions.

Respectfully, I believe this approach excessively tightens regulatory capital requirements on community banks, such as RV, which is unwarranted, beyond Congressional intent in many respects, and will likely cause a disruption in available credit in our marketplace and will limit the interest of investors in Community Banks, such as RV.

I wish to remind the Agencies that, in addition to the proposed Basel III rules, there are currently at least ten major mortgage related rulemakings in various stages of development (HOEPA, MLO compensation, TILA/RESPA integration, two appraisal rules, ability-to-repay, risk retention, escrow requirements, and mortgage servicing rules under both TILA and RESPA). This, in turn, builds upon at least seven major final rulemakings in the previous 36 months (RESPA reform, HPML requirements, two MDIA implementation rules, appraisal reforms, appraisal guidelines, and MLO compensation).

I am very much concerned about the continuing cumulative burden these rules will have on my institution. It is vitally important that the proposed regulatory capital rules be analyzed together in the context of other rulemakings and regulatory reforms—and be prospective in approach. The Agencies must not create capital requirements that are based upon occurrences in the past, under a different regulatory environment, and without consideration of other rulemakings and reforms.

For these reasons and for the concerns outlined below, the Agencies must withdraw the proposed regulatory capital rules, conduct additional study and analysis, and only propose

capital rules which take into consideration the impact other regulatory proposals and reforms will have on risk. The Agencies must recognize that there are many differences between community banks and large, complex international institutions—and must, therefore, not force a community bank into the same capital calculation "peg-hole" as a sophisticated international institution.
If the Agencies do not withdraw the proposals to further study the drastic impact they will have on community banks and on the U.S. financial industry as a whole, I urge the Agencies to take into consideration the specific concerns and recommended changes noted below.

Accumulated Other Comprehensive Income (AOCI)

As proposed, all unrealized gains and losses on available for sale securities (AFS) must "flow through" to common equity tier 1 capital. Therefore, if there is a change in the value of an AFS security (which can occur daily in some circumstances), that change must immediately be accounted for in regulatory capital. I wish to remind the Agencies that unrealized gains and losses occur in AFS portfolios primarily as a result of movements in interest rates—and *not* as a result of credit risk.

If the rules are finalized as proposed, with the inclusion of unrealized losses of AFS securities in common equity tier 1 capital, rising interest rates would put significant downward pressure on banking organizations' capital levels. This will potentially cause my bank to reduce our growth or shrink our securities portfolios considerably in order to maintain capital ratios at the desired or required levels. For example, a 300 bp increase in rates are modeled to change our $4million unrealized gain to an $8million unrealized loss. This $12million capital swing will have a punitive 12% negative impact on our common equity Tier 1 capital.

Additionally, as a community bank, we have been an investor in our local government entities. However, as proposed, the rules would discourage my bank from holding municipal securities, including holding U.S. Treasuries, because of the interest rate impact on such long-duration assets. This, in turn, could lead to a lower return on assets for my bank and less funding for the housing market and national and local governments, collectively.

For these reasons, I greatly oppose this proposed treatment. <u>The Agencies must remove this treatment from the proposals.</u>

Treatment of Trust Preferred Securities (TruPS)

The Agencies' treatment of trust preferred securities (TruPS) under the proposals must not be finalized as proposed. Presumably out of concern for such a debt instrument being treated as "capital", Congress, as part of the Dodd-Frank Act (DFA), prohibited any new issuances of TruPS; however, under the Collins amendment in DFA, TruPS are grandfathered for institutions between $500 million and $15 billion. Nonetheless, the Agencies' proposals ignore the Collins amendment by requiring a complete phase-out of TruPS beginning in 2013.

Many Wisconsin community banks hold TruPS as capital on their books. The proposed complete phase-out of TruPS creates a significant problem for community banks that are privately held as is RV. Investors in community banks are motivated by the growth opportunities such an investment affords rather than a desire to fill capital holes caused by changes in regulation.

This specific action would single-handedly force our family-owned bank to seek outside capital. It is unfair to change the rules regarding debt/equity capital treatment after banks made business decisions based on existing capital alternatives.

I strenuously oppose the Agencies' treatment of TruPS beyond that which Congress intended under DFA. The Agencies must preserve the full intent of the Collins amendment to DFA by *permanently* grandfathering outstanding TruPS for institutions between $500 million and $15 billion. This is critical for RV!

Capital Risk-Weights for Residential Mortgages and Related Matters, High Volatility Commercial Real Estate (HVCRE), and Home-Equity Lines of Credit (HELOCs)

The Agencies' proposals place new significantly higher capital risk weights in several categories of real property-secured loans despite having neither empirical evidence to substantiate the need for such heightened capital levels, nor a mandate under law. The proposals raise several significant concerns, including the following.

Residential Mortgage Exposures Risk Weights

The proposals assign risk weights to residential mortgage exposures based on whether the loan is a "traditional" mortgage (Category 1) or a "riskier" mortgage (Category 2) *and* the loan-to-value (LTV) ratio of the mortgage. The current risk weight for a real estate mortgage is generally 50%; however, depending upon the Category and LTV ratio of a particular residential mortgage, the capital risk could rise to 200%. These higher risk weights appear to be arbitrarily set as there is no empirical data presented by the Agencies to support this extraordinary increase in risk weights for certain types of mortgages.

Respectfully, I challenge the Agencies' assumption that a residential mortgage has a higher degree of risk based exclusively upon the loan having a balloon payment, an adjustable rate, or an interest-only payment, to warrant the substantial increases in capital risk weights that are proposed. The Agencies' proposed capital treatment far outweighs the reality of risk that we have experienced for these types of loans.

In addition, the substantial increase in risk weights will discourage my bank from making these types of loans even though we have experienced minimal losses. We make a variety of balloon, ARM, and interest-only loans with payments amortized over 10, 15, or 30 years. If we do continue to offer these loans the interest cost will increase to offset the required cost of capital. Thus, the consumer bears the cost. We provide such loan products in order to offer loans to good borrowers and to protect against interest-rate risk. However, the new risk weights will discourage us from making such loans. For example, if we make a 5-year balloon loan with a LTV of 81-90%, the capital risk weight **TRIPLES** from the current rule of 50% to 150% under the proposals. This type of treatment will detrimentally impact just how many loans I can offer my community and customers, will reduce or eliminate a traditional portfolio credit product that customers seek, and will also reduce our ability to protect against interest rate risk.

The Agencies must not finalize the proposed rules with such severe and unwarranted risk weighted treatment of residential mortgage exposures.

Capital Requirements for Loans with Credit-Enhancing Representations and Warranties

Under the proposed rules, if a bank provides a credit-enhancing representation or warranty on assets it sold or otherwise transferred to third parties, the bank would be required to treat

such an arrangement as an off-balance sheet guaranty and apply a 100% credit conversion factor to the transferred loans while the credit-enhancing representations and warranties are in place. This new requirement would affect any mortgage sold with a representation or warranty that contains (1) an early default clause, and/or (2) certain premium refund classes that cover assets guaranteed, in whole or in part, by the U.S. government or a government-sponsored entity. Currently, the risk-based capital charges do not apply to mortgages once they are sold to third parties, even where the seller provides representations and warranties to take back mortgages that experience a very early payment default—such as within 120-days of the sale of the mortgage.

The proposal would result in substantial additional capital charges for the mortgages we sell and will limit the amount of credit I can make available to potential borrowers. I believe there is little evidence that the temporary representations and warranties associated with these mortgages have resulted in significant losses for a regulated financial institution—even during the financial crisis.

As a result, the Agencies must retain the 120-day safe harbor under the current risk weight rules and not impose this additional capital charge.

High Volatility Commercial Real Estate (HVCRE)

As proposed, high volatility commercial real estate (HVCRE) is defined as acquisition, development and construction (ADC) commercial real estate loans except: (1) One- to four-family residential ADC loans; or (2) commercial real estate ADC loans in which: (a) applicable regulatory LTV requirements are met; (b) the borrower has contributed cash to the project of at least 15% of the real estate's "appraised as completed" value prior to the advancement of funds by the bank; and (c) the borrower-contributed capital is contractually required to remain in the project until the credit facility is converted to permanent financing, sold or paid in full. Under the proposed standardized approach, each HVCRE loan in a bank's portfolio will be assigned a 150 percent risk weight.

While I recognize the fact that certain types of commercial real estate (CRE) lending may pose a higher risk given today's economic environment, the Agencies' proposals impose a higher risk weight without considering any of the following mitigating factors in connection with a particular transaction: LTV ratio; dollar amount of the loan; other commercial real estate assets of the borrower; any guaranty; or other general risk-mitigating factors of a particular CRE loan request. Just as these risk-mitigating factors are analyzed when we decide whether to approve or deny a particular CRE loan request, the Agencies must also take these mitigating factors into consideration when assigning a capital risk weight to a particular CRE.

If mitigating factors are not taken into consideration, the proposals would certainly require us to limit this type of lending, as well as charge a premium to the borrower.

Therefore, the Agencies must revise their proposed HVCRE risk weight to take into consideration risk-mitigating factors.

Home-equity Lines of Credit (HELOCs)

The proposal classifies all junior liens, such as home-equity lines of credit (HELOCs), as Category 2 exposures with risk weights ranging from 100 to 200%. In addition, a bank that holds two or more mortgages on the same property would be required to treat *all* the mortgages on the property—even the first lien mortgage—as Category 2 exposures. Thus, if

a bank that made the first lien also makes the junior lien, the junior lien may "taint" the first lien thereby causing the first lien to be placed in Category 2, and resulting in a higher risk weight for the first lien. By contrast, if one bank makes the first lien and a different bank makes the junior lien, then the junior lien does not change the risk weight of the first lien. There is one exception to this general treatment; however, that exception is very narrow and thus, most junior lien mortgages will likely be deemed Category 2 mortgages.

Again, this is another area within the proposals for which the Agencies have provided no data to support their assertion that all HELOCs are risky and warrant such severe treatment. In reality, HELOCs are carefully underwritten—based not only on the value of the home, but upon the borrower's creditworthiness and with some of the strongest LTV ratios.

While we have incurred some minor losses on HELOCs during this recessionary period, strong underwriting guidelines mitigate credit exposure and loss. Thus, an across-the-board doubling of the risk weighting of HELOCs is not appropriate.

The Agencies must remove the treatment that all HELOCs are an automatic Category 2 classification.

No Grandfather Treatment for Existing Mortgage Loans

Finally, the proposed rules do not include any type of grandfather provision. Thus, ***all*** mortgage loans currently on the bank's books will be subject to the new capital requirements. This will require bank staff to examine old mortgage underwriting files to determine the appropriate category and LTV ratio for each mortgage. This is a daunting task and comes at a time when the industry is also implementing numerous other *substantial* regulatory revisions and reforms previously mentioned. We simply do not have resources necessary to gather all of the information required to properly determine the revised risk weights for existing mortgage loans. We have not tried to quantify the impact of this on RV as the cost is too punitive.

The Agencies must grandfather all existing mortgage exposures by assigning them the current general capital risk-based weights.

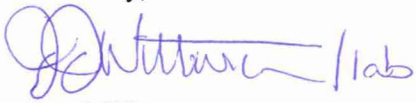
Conclusion

For the concerns outlined above, the Agencies must withdraw the proposed regulatory capital rules, conduct additional study and analysis, and only propose capital rules which take into consideration the impact other regulatory proposals and reforms have on risk.

The Agencies must recognize that there are many differences between community banks, such as RV, and large, complex international institutions—and must, therefore, not force a community bank into the same capital calculation "peg-hole" as a complex international institution.

I appreciate the opportunity to comment on the Agencies' proposals.

Sincerely,



Jay J. Wittman
Chief Operating Officer
