Subject: [EXTERNAL MESSAGE] RIN 3064-AF02 - Request for Comment on Proposed Revisions to Interest Rate Restrictions on Institutions that are Less than Well Capitalized- FDIC-2019-0092-0001
Date: Tuesday, October 29, 2019 10:02:47 PM

Patterson State Bank is a \$230 Million family owned bank located in Patterson, LA. We serve the local community bank with good ole fashion banking products....deposits and loans. We also strive to provide the latest in banking technology in order to compete with the larger and more risky banks. We provide mortgages that are retained on our books and strive every day to provide local deposit rates for our community. My bank is supportive of the FDIC's efforts on this issue and the broader proposal to modernize outdated brokered deposit rules. We are appreciative of the recent clarification that the rate cap restrictions do not — and should not — apply to well-capitalized institutions. The FDIC's proposal does not go far enough toward creating a robust market rate. It could also prove even more problematic for banks and lead to a pro-cyclical restriction of rates. The problem with the current proposal is that it does not take into account non-bank competitors (such as credit unions and non-bank financial firms) or capture many bank deposit products. It is important that the national rate reflect a market rate so that it remains robust throughout the business and economic cycles. A non-competitive rate can reduce the ability of weaker institutions to improve their condition as they are handicapped in their ability to raise prudent deposits. My bank strongly recommends that the FDIC base its rate on transparent and publicly available market data, such as the Treasury and Fed funds markets. In addition to a robust national rate, the FDIC should allow alternatives. We support the proposed process changes to the local rate, but urge the FDIC to allow a bank to use 125 percent of the highest competing rate. This will safeguard against an overly restrictive rate that prohibits less than well capitalized institutions from raising deposits. We also encourage the FDIC to establish a periodically reviewed list of allowable alternatives, such a regional FHLB's rates, or other appropriate rates, which reflect the cost of funds within their region or competitive deposit market. Sincerely, Brian Thorguson
