To whom it may concern,

Airflow Products Company is a manufacturer of air filtration products used in commercial, industrial and residential HVAC applications. Since establishing this company in 2002, BB&T has provided both short-term, and long-term capital which has enabled Airflow to expand our manufacturing facilities, (200,000 sq. ft currently) hire employees, (360 current employees) and extend our distribution network, (26 states and 4 countries).

Our relationship with BB&T is not specific to financing, as we utilize other services and products provided by the various divisions, (health insurance, commercial property and liability insurance, wealth management).

BB&T, through its' local branches as well as corporate assistance, has provided the support and resources needed to make Airflow Products the successful company that it is today. We are meeting our business objectives and goals daily due in large part to the assistance of BB&T.

I support the merger of BB&T and Suntrust, and believe the combined entity will be good for the local community, for my business, and for the associates as well.

Best regards,

Jeff Holt
Owner / Vice President
