Re: Prohibitions and Restrictions on Proprietary Trading and Certain Interests in, and Relationships With, Hedge Funds and Private Equity Funds (SEC File Number S7-41-11; FRS Docket No. R-1432 & RIN 7100 AD 82; FDIC RIN 3064-AD85; OCC Docket ID OCC-2011-14; CFTC RIN 3038-AD05).

Dear Sirs and Madams,

The Association of Institutional INVESTORS (the “Association”)¹ appreciates the opportunity to provide comments related to the proposed rule titled, “Prohibitions and Restrictions on Proprietary Trading and Certain Interests in, and Relationships With, Hedge Funds and Private Equity Funds” (the “Proposed Rule”).² The Association recognizes the efforts undertaken by the Securities and

¹ The Association of Institutional INVESTORS is an association of some of the oldest, largest, and most trusted investment advisers in the United States. Our clients are primarily institutional investment entities that serve the interests of individual investors through public and private pension plans, foundations, and registered investment companies. Collectively, our member firms manage ERISA pension, 401(k), mutual fund, and personal investments on behalf of more than 100 million American workers and retirees. Our clients rely on us to prudently manage participants’ retirements, savings, and investments. This reliance is built, in part, upon the fiduciary duty owed to these organizations and individuals. We recognize the significance of this role, and our comments are intended to reflect not just the concerns of the Association, but also the concerns of the companies, labor unions, municipalities, families, and individuals we ultimately serve.

² Prohibitions and Restrictions on Proprietary Trading and Certain Interests in, and Relationships With, Hedge Funds and Private Equity Funds, 76 Fed. Reg. 68,846 (Nov. 7, 2011). We recognize the CFTC did not join the other prudential

Exchange Commission (“SEC”), Board of Governors of the Federal Reserve (“Federal Reserve”), Federal Deposit Insurance Corporation (“FDIC”), Office of the Comptroller of the Currency (“OCC”), and Commodity Futures Trading Commission (“CFTC” and together with the other agencies, the “Agencies”) to implement rules regarding proprietary trading and restrictions on relationships with covered funds, as required under the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”).³ However, the Association has some concerns with the Proposed Rule relating to both the proprietary trading restrictions and the restrictions on covered fund activity.

The Association represents asset managers that work on behalf of institutional investors, such as pension funds and 401(k) accounts. Although this rulemaking is focused on the activities of banks, we believe that the Proposed Rule will negatively affect the clients of institutional asset managers, and therefore have consequences for millions of American investors who rely on the continued vitality of these pension plans and 401(k) accounts. We are concerned that the implementation of the Volcker Rule as currently constructed will result in a reduction in the breadth of investment options available to the marketplace, as bank dealers exit lines of business due to increased compliance costs and uncertainty about the boundaries of permissible and impermissible activities. The Proposed Rule may also diminish the depth of both liquid and illiquid sectors of the market because the complex nature and interplay of the factors and metrics proposed in the rule are impracticable to implement.

The unintended consequences of this well intentioned Proposed Rule may be to deepen and extend the current economic downturn.

I. PROPRIETARY TRADING RESTRICTIONS

The Association is concerned that the Proposed Rule, as currently drafted, may fundamentally change how, or whether, banks will be willing to serve as major liquidity providers. We believe that the Proposed Rule offers arbitrary and complex tests for determining whether a bank meets the exemptions from the proprietary trading restrictions, which do not adequately reflect the realities of the financial markets. We are concerned that unless significant changes are made to the Proposed Rule, our institutional investment clients will be negatively affected.

regulators in issuing the Proposed Rule. However, because the Association preliminarily believes the CFTC’s proposed rule, RIN 3038-AD05, which has not yet been published in the Federal Register, will be substantially similar to the Proposed Rule, we have determined that it is appropriate to provide the CFTC with the Association’s comments at this time. The Association believes that it is important for the CFTC to consider these comments because the prudential regulators must issue final joint regulations together.

³ See Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111–203, 124 Stat. 1376 (2010). Further, although the Association appreciates the Agencies’ efforts to implement Section 619 of the Dodd-Frank Act, we also recognize the arguments made by others, including Chairman of the House Financial Services Committee Spencer Bachus (R-AL), who have called for Congress to reevaluate the provision, stating that Section 619 creates a “self-inflicted wound” on the U.S. markets and have noted that other efforts, such as implementing the Basel III capital requirements, may more properly address bank risk taking addressed by the Volcker Rule. See *Examining the Impact of the Volcker Rule on Markets, Businesses, Investors and Job Creation Before the H. Subcomms. On Capital Markets and Government Sponsored Enterprises and Financial Institutions and Consumer Credit*, 112th Cong. (Jan. 18, 2012) (opening statement of Rep. Spencer Bachus, Chairman, H. Comm. on Financial Services).

Asset managers and their clients rely on banks to execute trades. Anecdotal evidence suggests that in today's market well more than half of institutional investment adviser transactions consist of trades with banks, including foreign banks. In this role, banks are providing critical services for the functioning of the secondary market. While we understand that the regulators' intention is not to inhibit banks' legitimate market making functions, we remain concerned that unless changes are made to the Proposed Rule, market making activities will be curtailed, causing negative (though unintended) consequences for institutional and individual investors.

In particular, the Proposed Rule's definitions relating to permitted activities do not recognize key differences between markets with continuous liquidity versus episodic liquidity. In markets with episodic liquidity, such as many fixed income markets, banks do not simply engage in agency trading without risk, only buying from a client or an investor seller when they already have counterparty demand and know the price that they will be able to sell the asset. Instead, traditional market making entails banks being able to hold inventory on their books, assuming the role of being a direct counterparty to the client or investor seller. In such a situation, banks will buy illiquid assets from sellers such as asset managers acting on behalf of their clients even if the bank has not yet found a buyer for such assets, agreeing to hold the assets until another buyer wishes to purchase them, which may occur quickly in some situations and slowly in others.

The potential for the Proposed Rule to restrict a bank's ability to engage in principal-based trading and to cause a bank to convert to an agency trading model, where buyers and sellers must be matched before a trade is executed, may have devastating effects on an asset manager's ability to serve the needs of the institutional investors, such as ERISA pension and 401(k) plans. A bank's willingness to take on this risk in order to facilitate customer transactions and hold assets in dealer inventory until a willing buyer is found is essential in less liquid markets because it allows an asset manager to choose which assets it wishes to sell to meet redemption requests from institutional investors. Without it, asset managers may be forced to do a "fire sale" of illiquid assets, or simply sell what assets it *can* sell, not what assets it *wants* to sell. This will result not only in the loss of assets that the asset manager otherwise wanted to retain for the client, but also in the residual portfolio becoming increasingly illiquid. An increasingly illiquid portfolio is harmful to the remaining investors. As liquidity concerns rise, an asset manager may also have to carry additional cash to ensure that it can pay redemption orders at a customer's request. Alternatively, it may be necessary in some cases, where possible, for an asset manager to place additional restrictions on when investors can redeem their money out of a fund. In many cases it may also be difficult or impossible for an asset manager to amend restrictions on various types of funds, including ones established under the Investment Company Act of 1940 ("40 Act Funds"), which have regulations governing redemption requests.

Even if dealers are still willing to make markets for institutional investment advisers, the Proposed Rule may also negatively affect investors by reducing market depth and raising costs. Currently, banks provide investors with choice, offering securities with varying characteristics. The Proposed Rule may cause banks to limit the securities kept in inventory, depleting the pool of available securities for investors and affecting the ability of investors to efficiently manage their portfolios. Further, we believe this Proposed Rule will significantly raise costs for investors, including institutional investors such as pension funds and 401(k) accounts, because the compliance costs for banks will inevitably be passed on to investors.

Bid-ask spreads will also widen, reducing the ultimate return investors will receive. By limiting when banks can engage in principal-based trading, the natural result will be that the difference between the price a buyer is willing to pay for a security, compared with the price in which a seller is willing to sell a security, will increase. These costs, coupled with a tightening of liquidity in the market, will negatively affect the ability of pension funds and 401(k) accounts to function in the most effective manner. By taking on reasonable risk and principal positions, banks enable markets with otherwise episodic liquidity to operate in a vibrant and efficient way for millions of American investors.⁴

In addition to adversely affecting the secondary markets by decreasing liquidity and the depth of markets, the Proposed Rule also has the potential to distress primary markets. Without a vibrant secondary market for fixed income securities, for example, underwriters in the primary market will be less likely to underwrite debt offerings, resulting in fewer options for institutional investors, and U.S. companies will be forced to borrow directly from banks for their capital needs. Complicating this situation, since the economic downturn, many banks are unwilling or unable to lend, which will exacerbate American business's ability to access capital, grow the economy, and create jobs.

To address these concerns, we believe the Agencies should focus on client activity when drafting a workable test for the markets, starting from a presumption that the bank is engaged in permitted activity, rather than presuming that the trading activity is proprietary unless the bank can meet one of the permitted activity tests. The Proposed Rule essentially characterizes banks as guilty until proven innocent, which the Association believes is an unwise and unsound position that will result in numerous negative consequences. As discussed in further detail below, the Association is particularly concerned with potential negative consequences that could result from the Agencies' narrow interpretations of: (1) the market maker exemption; (2) the risk mitigating hedging exemption; and (3) the municipal bond exemption.

A. Presumption of Proprietary Trading

The exemptions enumerated in the Proposed Rule require banks to meet a set of criteria to show that they are not engaged in proprietary trading, creating a presumption that the activity *is* proprietary trading unless the banks prove otherwise. This is inconsistent with congressional intent and may result in banks being unwilling to take principal risk to provide liquidity services to institutional investors. Unless this is changed, the Proposed Rule would allow the Agencies to second-guess a bank's actions after it has completed trades, making it difficult or risky for the bank to assist asset managers in executing such trades. This result may unnecessarily constrain liquidity in secondary markets and cause asset managers and others to look to alternative non-U.S. markets to service client needs. Such actions may also decrease transparency in the marketplace, in direct contrast to the Dodd-Frank Act's stated goals, and result in the U.S. losing market share, potentially hurting the still-fragile economy.⁵

⁴ In that regard, we note that while retail investors generally trade equity securities on exchanges (on a commission-basis through an agent), fixed-income markets are more commonly sold on a bid-ask spread through a principal intermediary, and thus, will be greatly impacted by the Proposed Rule. Further, even though a substantial portion of equity trading is conducted on an agency basis, a considerable amount of equity trades entered into by the funds and accounts managed by our members is traded on a principal basis and will, therefore, also be impacted.

⁵ See 156 CONG. REC. S5912-13 (daily ed. July 15, 2010) (statement of Sen. Leahy (D-VT)): "The conference report we are voting on today goes directly to the heart of the Wall Street excesses that brought our economy to the brink. For far too long Wall Street firms made risky bets in the dark and reaped enormous profits. Then, when their bets went sour,

During the Dodd-Frank Act Conference Committee negotiations, Senator Jeff Merkley (D-OR) noted that the Agencies can distinguish proprietary trading from market making based on, “volume of trading, the size of the positions, the length of time that positions remain open, and the volatility of profits and losses.”⁶ While we agree that these factors may generally help differentiate market making from proprietary trading, if implemented incorrectly, these same factors could unnecessarily constrict what a bank is willing, or even able, to accomplish and likely lead to liquidity drying up for the secondary market, which Congress was trying to avoid by including the market making exemption.⁷

Under the Proposed Rule’s market making exemption test, regulators will scrutinize behavior after-the-fact and may “discover” proprietary trading, when banks were actually engaged in market making. Ambiguities in the test and uncertainty as to whether the Agencies will interpret legitimate behavior as proprietary trading may make it difficult for banks to remain in this role. Congress noted that market making is a “customer service,” assisting customers in the “speedy acquisition or disposition of certain financial instruments.”⁸ If banks are unwilling to continue intermediating trades for institutional investors because the Proposed Rule creates uncertainty as to whether such activity is market making, the ultimate harm will fall on individuals and families, who utilize pension funds and 401(k) funds for their retirement savings.

This presumption will limit the tools available to asset managers to hedge and diversify their risk exposure. It will create problems not only for fixed-income markets, but also for equity markets, including millions of individuals invested through retail accounts and workplace retirement plans such as 401(k) accounts. While retail investors and smaller institutional investors often trade equities using an agency-based “last sale” model, larger investors trade in a myriad of ways with covered banking entities in an effort to reduce execution costs, mitigate risk, and improve returns. It is

they turned to America’s taxpayers to bail them out. This bill is about changing the culture of rampant Wall Street speculation and doing what needs to be done to get our economy back on track. We need more transparency and oversight of Wall Street. These improvements will increase transparency in and oversight of the financial sector . . . It has seemed to me that promoting transparency should be a vital element of Wall Street reform. Transparency is a cleansing agent for healthy markets. Open information helps investors make sound decisions. When information is murky, market decisions must be based on guesses or rumors that corrode trust and that encourage fraud and deception.”

⁶ See 156 CONG. REC. S5896 (daily ed. July 15, 2010) (statement of Sen. Merkley (D-OR)): “Market-making is a customer service whereby a firm assists its customers by providing two-sided markets for speedy acquisition or disposition of certain financial instruments. . . . Academic literature sets out the distinctions between making markets for customers and holding speculative positions in assets, but in general, the two types of trading are distinguishable by the volume of trading, the size of the positions, the length of time that positions remains open, and the volatility of profits and losses, among other factors. Regulations implementing this permitted activity should focus on these types of factors to assist regulators in distinguishing between financial firms assisting their clients versus those engaged in proprietary trading.”

⁷ See 156 CONG. REC. S5906 (daily ed. July 15, 2010) (statement of Sen. Bayh(D-IN)): “With respect to the Volcker Rule, the conference report states that banking entities are not prohibited from purchasing and disposing of securities and other instruments in connection with underwriting or market making activities, provided that activity does not exceed the reasonably expected near term demands of clients, customers, or counterparties. I want to clarify this language would allow banks to maintain an appropriate dealer inventory and residual risk positions, which are essential parts of the market making function. Without that flexibility, market makers would not be able to provide liquidity to markets.”

⁸ See 156 CONG. REC. S5896 (daily ed. July 15, 2010) (statement of Sen. Merkley (D-OR)).

crucial for advisers to large institutional clients to have access to covered banking entities' traditional equity securities market making activities, including the ability to enter into block trades and hedge without undue restriction, so that end investors are not subject to unnecessary increased risk and costs.

Similarly, the ability of institutional investors to continue to use over-the-counter (OTC) derivatives products to safely diversify their portfolios and effectively hedge or manage risks may also be impaired unless the presumption is changed. Activity in OTC derivatives markets can easily be misinterpreted as proprietary trading because market makers in this asset class usually act as principals who take positions in instruments with episodic liquidity in order to facilitate customer needs. Market making is also fundamental to OTC derivatives trading, as dealers use derivatives as part of their overall fixed income or equity trading to hedge out risk on a portfolio basis. Unless the market making exemption is sufficiently expanded to ensure that banks may continue to act as market makers with respect to OTC derivatives, the result for our investment funds, and ultimately our investors, will be diminished liquidity, less portfolio diversification, less ability to hedge, and increased costs. Also, in the event that banks limit their OTC derivatives trading as a result of the Proposed Rule, it would lead to less counterparty diversification, which increases counterparty risk for the funds and accounts managed by our members.

We recognize that determining the exact criteria to be used in defining proprietary trading is difficult. With that said, we agree with Federal Reserve Governor Daniel Tarullo that while some trades are “textbook examples” of proprietary trading or market making, the majority of trades include buyers and sellers arriving “at different times, in staggered numbers, and often have demands for similar but not identical assets.”⁹ Therefore, the Association suggests that the Agencies make the rule simpler, focusing on “trading activities that are organized within a discrete business unit, and that are conducted solely for the purpose of executing trading strategies that are expected to produce short-term profits without any connection to customer facilitation or intermediation,” in defining proprietary trading, in a way which is, “not difficult to identify.”¹⁰ By doing so, the Agencies would be consistent with former Federal Reserve Chairman Paul Volcker’s statements that it should be easy to recognize proprietary trading.¹¹

We are disappointed with Governor Tarullo’s statement that the Agencies considered and rejected simpler tests to determine proprietary trading. We disagree that such tests would “fail to adequately capture the full range of activities that are prohibited under the [Dodd-Frank Act],” because, as stated previously, even former Chairman Volcker believed that true proprietary trading should be easy to spot. We are concerned that the Agencies are attempting to determine motive and intent under the Proposed Rule, and urge the Agencies to make the distinction as clear as possible.¹² At a

¹² House Financial Services Committee Chairman Spencer Bachus also noted concerns with the Agencies’ attempt to determine motive and intent, stating “when we have to determine peoples’ motive, we’re on thin ice.” See *Examining the Impact of the Volcker Rule on Markets, Businesses, Investors and Job Creation Before the H. Subcomms. On Capital Markets and*

minimum, we hope that the Agencies will meet the expectation noted by House Financial Services Committee Ranking Member Barney Frank (D-MA), who said that banks should not have to worry about getting “too close to the line,” because the agencies will not be predisposed to considering such market making activities to be proprietary trading.¹³

B. Market Making Exemption

As required under the statute, the Proposed Rule exempts market making activities.¹⁴ In order to satisfy the market making exemption under the Proposed Rule, a banking entity must be able to *prove* that the activity meets a list of seven criteria, including: (1) establishment of an internal compliance program; (2) the activity must meet bona fide market making requirements; (3) trades must match the reasonably expected near-term demands of clients, customers, and counterparties; (4) the banking entity relying on the exemption must be appropriately registered under securities or commodities laws; (5) market making-related activities must be designed to generate revenues primarily from fees, commissions, bid/ask spreads or other similar income; (6) compensation incentives must not be designed to reward proprietary trading activities; and (7) consistency with the commentary attached to the rule in Appendix B.¹⁵

While the Association understands that it was “particularly challenging”¹⁶ for the Agencies to determine how to distinguish permissible market making related activities from prohibited proprietary trading, the Proposed Rule’s current exemption does not adequately fulfill the congressional goal of ensuring that legitimate market making activities remain permissible.¹⁷ Instead, the market making exemptions’ strict and complicated requirements, including: “(1) seven criteria that a banking entity’s activities must meet to rely on the market making exception, including establishment of a compliance program; (2) six principles that the Agencies will use as a guide in distinguishing bona fide market making from prohibited proprietary trading; and (3) seventeen quantitative metrics that a banking entity with significant trading activities must report for each of its trading units at every level of the organization,”¹⁸ will in fact jeopardize legitimate activity. Rather

¹⁶ See *Examining the Impact of the Volcker Rule on Markets, Businesses, Investors and Job Creation Before the H. Subcomms. On Capital Markets and Government Sponsored Enterprises and Financial Institutions and Consumer Credit*, 112th Cong. (Jan. 18, 2012) (statement of Acting Comptroller of the Currency John Walsh).

¹⁷ See 156 CONG. REC. S5896 (daily ed. July 15, 2010) (statement of Sen. Merkley (D-OR)): “Accordingly, while previous versions of the legislation referenced ‘market-making,’ the final version references “market- making-related” to provide the regulators with limited additional flexibility to incorporate those types of transactions to meet client needs, without unduly warping the common understanding of market-making.”

¹⁸ See *Examining the Impact of the Volcker Rule on Markets, Businesses, Investors and Job Creation Before the H. Subcomms. On Capital Markets and Government Sponsored Enterprises and Financial Institutions and Consumer Credit*, 112th Cong. (Jan. 18, 2012) (statement of Acting Comptroller of the Currency John Walsh).

than providing clear guidelines by which traders are encouraged to continue permissible trading, traders will likely restrict their activity out of fear of getting too close to the ambiguous line.

The Association is particularly concerned that the criteria requiring that trades, “match the reasonably expected near-term demands of clients, customers, and counterparties,” may be too ambiguous to be meaningful. The “reasonably expected near-term demands of clients, customers, and counterparties,” means different things in different markets – for certain illiquid markets, the “near-term” may be much longer than in other, more liquid, markets. While we recognize that this requirement is congressionally mandated, the Association urges the Agencies to construe it as narrowly as possible and define “near-term” in a way that considers the needs of markets that are illiquid or have episodic liquidity.

Requiring banks to prove that their activities are designed to “generate revenues from fees, commissions, bid-ask spreads or other similar income that is not related to proprietary trading”¹⁹ does not adequately ensure that legitimate market making is protected because this test is an over-inclusive indicator. Banks engaged in market making do not always have a matched trade ready when the assets must be purchased from the asset manager. A bank facilitating client demand may hold an asset that will appreciate in value as it remains on the books until a willing buyer is located. The Proposed Rule will create fear that this appreciation may be deemed proprietary speculation and result in banks refraining from the market making that is essential to maintain market liquidity, particularly in fixed income markets. The Agencies should focus on ensuring positions taken by a bank relate to the customer activity, regardless of the magnitude or length the positions are held open, or whether the bank is acting as an agent or principal in the trade. As long as a bank’s positions relate to customer activity, then its activities should be presumed to be market making, and not proprietary.

Further, the Association appreciates the Agencies’ desire to maintain legitimate market making activities, but believes this could be achieved in a manner that presumes that a bank’s activity is **not** proprietary trading unless proven otherwise. Since the Dodd-Frank Act passed, some banks have already begun discontinuing proprietary trading desks.²⁰ The industry has demonstrated, in advance of the Proposed Rule’s effective date, that they understand and are willing to change their business models to comply with the purpose of the Proposed Rule. In light of these good faith efforts, we urge the Agencies to simplify the Proposed Rule to ensure that banks are able to continue those market making related activities that Congress intended to be protected, as our members rely on these activities for trading by the funds and accounts that they manage.

C. Risk Mitigating Hedging Activity

Section __.5 of the Proposed Rule, similar to the market making exemption, provides a number of requirements that firms must attain in order to rely on a risk-mitigating hedging exemption available

¹⁹ Prohibitions and Restrictions on Proprietary Trading and Certain Interests In, and Relationships With, Hedge Funds and Private Equity Funds, 76 Fed. Reg. at 68,962.

²⁰ Liz Rappaport, *Goldman to Shut Global Macro Trading Desk*, WALL STREET JOURNAL, Feb. 15, 2011, <http://online.wsj.com/article/SB10001424052748704409004576146702013530680.html> (Goldman Sachs closed its Global Macro Proprietary Trading desk “to comply with the Volcker Rule.”).

under Section 13 of the Bank Holding Company Act (“BHC”).²¹ According to the Proposed Rule, the criteria is intended to define the scope of permitted risk-mitigating hedging activities and to prohibit reliance on the exemption for proprietary trading that is mischaracterized as permitted hedging activity.²²

The Association agrees that hedging is an appropriate indicator of an entity’s risk appetite, but believes that this indicator breaks down at the trade-by-trade level. In particular, this indication fails when gauging whether hedging activities are proper for illiquid markets, where perfect hedges are often not available. Although we appreciate SEC Chairman Mary Schapiro’s assurances, in response to a question from Ranking Member Barney Frank at a House Financial Services Committee hearing on the Volcker Rule, that the Agencies will not be looking at trading activity at the trade-by-trade level, we ask that the Agencies make this more explicit in the final rulemaking.²³ Without making this explicit in the final rulemaking, we worry that trades will still be looked at on an individual basis, potentially finding proprietary trading in situations that are not, when considered overall.²⁴

Further, members of the Association work to reduce execution costs, mitigate risk, and improve returns for millions of investors in the funds and accounts that they manage. These goals are achieved by trading with market makers that use generally available hedges to bridge the gap between time and price with various traders in the market. The hedging exemption, therefore, must include a broad definition of what constitutes a “trading unit” (also known as an “aggregation unit”) to permit banking entities to hedge adequately their trades with institutional clients.

If the Agencies interpret “trading unit” too narrowly, or if the market making exemption is too restrictive, the ability of funds to enter into block trades with banking entities could be significantly diminished, to the detriment of funds and their investors. Block trading is traditionally used when the size of the trade would strain the market and potentially result in increased execution costs, as a result of adverse market movements, and increased risk, because the trade requires an extended time period for completion. In order for a banking entity to fill this need, it may gauge risk across its entire platform, rather than across one trading desk, and agree to take positions on its books until an appropriate buyer is available. In doing so, banking entities are effectively mitigating risk.

If the Agencies look too narrowly at the hedging correlation, i.e., on a trade-by-trade basis, it may in actuality increase risk. It will disallow banking entities to continue to effectively hedge, thus limiting activity with funds and keeping the risk in the marketplace, but at the fund level, thereby exposing individual investors to this unhedged risk. Similarly, program risk trading, in which banking entities manage their risk across the entire trading organization, enables asset managers to swiftly and

²¹ Prohibitions and Restrictions on Proprietary Trading and Certain Interests In, and Relationships With, Hedge Funds and Private Equity Funds, 76 Fed. Reg. at 68,875.

²² *Id.* at 68,874.

²³ See *Examining the Impact of the Volcker Rule on Markets, Businesses, Investors and Job Creation Before the H. Subcomms. (Jan. 18, 2012) (statement of Securities and Exchange Commission Chairman Mary Schapiro).

²⁴ Indeed, House Financial Services Committee Chairman Spencer Bachus noted that he shared similar concerns, stating that although Chairman Schapiro says the SEC will not look at individual trades, he “doesn’t know how you enforce a rule without looking at individual trades.” *See id.*

efficiently trade multiple securities in a single transaction. It also allows asset managers to manage significant flows into and out of funds and accounts in a cost-efficient manner. Program risk trading would be significantly impaired if the proposed restrictive interpretation of hedging and trading units were adopted under the Proposed Rule. The result would be significantly reduced ability for funds and accounts to trade with banking entities and diminished market liquidity, as the elimination or substantial reduction of program risk trading would likely result in less trading in general.

D. Municipal Bond Market Exemption

Section __.6(a) of the Proposed Rule describes the government obligations in which a banking entity may trade, notwithstanding the prohibition on proprietary trading, including government obligations and U.S. State and municipal obligations.²⁵ This exemption is too narrow because it prohibits banks from trading in a significant portion of the current municipal bond activities, including securities issued by State agencies or instrumentalities. We respectfully disagree with the Agencies' interpretation that its exemption is "consistent with the statutory language," because it does not extend the government obligations exemption to include "transactions in obligations of an *agency* of any State or political subdivision thereof."²⁶

Further, the Association disagrees with the Agencies interpretation that statutory silence on State agencies is reason to not include State agency transactions within the exemption. Such an interpretation is inconsistent with legislative history. Congress did not intend to limit the funding availability for projects such as hospitals, affordable housing developments, airports, and universities that receive financing through municipal obligations, and in fact, the Dodd-Frank Act specifically permits trading with regard to "obligations of any State or of any political subdivision thereof."²⁷ Consistent with exercising its sovereign powers through agencies and other instrumentalities, States may authorize political subdivisions to finance a revenue-generating project through the issuance of municipal bonds backed by bond revenues, not taxes. Particularly since the same type of entity may have differing powers from State to State, it is simply unworkable for the Agencies to construct such a narrow interpretation of this exemption.

If the Proposed Rule is implemented as currently drafted, it may have a significant impact on the municipal bond market, affecting not only institutional investors that regularly invest in these markets, but also the States and municipal agencies that will no longer have access to the capital provided by such investors. The municipal markets provide valuable tax-exempt tools for institutional investors. Despite the challenges that municipal issuers face in the current economy, municipal securities continue to have a lower risk of default than other types of debt and are also beneficial to States and municipalities.²⁸ The result of the Volcker Rule may be the creation of an

²⁵ Prohibitions and Restrictions on Proprietary Trading and Certain Interests In, and Relationships With, Hedge Funds and Private Equity Funds, 76 Fed. Reg. at 68,877.

²⁶ *Id.* at 68,878 n.165 (emphasis in original).

²⁷ See Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111–203, 124 Stat. 1376, 1624 (2010).

²⁸ "In comparing the riskiness of municipal and corporate bonds, at least in terms of expected default, municipal bonds can be considered much safer than equally rated corporate bonds. According to the rating agency Moody's, there have been only 54 defaults by municipal bond issuers since 1970. Research firm Robini Global Economics estimates the size of the U.S. municipal bond market to be \$2.7 trillion. On the other hand, there were 191 defaults by corporate bond issuers in 2009 alone. According the Fitch, the size of the US corporate bond market is about \$4 trillion." Stephen J.

unnecessary bifurcation of the municipal securities market, which will impede the ability of tax-exempt organizations to raise capital and negatively affect the liquidity of the municipal markets.

Therefore, the Association urges the Agencies to expand its exemption for proprietary trading in State or municipal agency obligations under Section 13(d)(1)(J) of the BHC.²⁹ This could be accomplished by adopting the definition of “municipal securities” already included in Section 3(a)(29) of the Securities Exchange Act of 1934. Utilizing such a definition in the exemption would promote the financial stability of the U.S., providing a clearer line for banks to follow on what is covered under the municipal bond market exemption and permitting investors to continue investing in municipal debt at reasonable costs.

II. COVERED FUNDS

Section __.10(a) of the Proposed Rule implements Section 13(a)(1)(B) of the BHC Act and prohibits a banking entity from, as principal, directly or indirectly acquiring or retaining an equity, partnership, or other ownership interest in, or acting as sponsor to, a covered fund, unless certain exemption criteria are met.³⁰ The covered fund restrictions create a competitive disadvantage for asset managers that are affiliated with banking institutions.

A. Definition of “Covered Fund” and Applicability to Covered Foreign Funds

Although we recognize the Agencies need to address the potential for evasion from the Volcker Rule by capturing certain foreign funds and commodity pools, the approach taken is over-inclusive and should be refined. Currently, the Proposed Rule defines “covered fund” as including both hedge funds and private equity funds.³¹ It also covers other funds that are not commonly understood to be either a “hedge fund” or a “private equity fund” by including issuers that are investment companies, as defined in the Investment Company Act, but for Section 3(c)(1) or 3(c)(7) of the Act.³² The “covered fund” definition includes an issuer organized or offered outside of the U.S. which would be a 3(c)(1) or 3(c)(7) fund if offered or organized inside the United States. Sections 3(c)(1) and 3(c)(7) are exclusions from the definition of “investment company” that are commonly relied on by a wide variety of entities that would otherwise be covered by the broad definition of “investment company.”

Additionally, the Proposed Rule incorporates the statutory application of the rule to cover “such similar funds as the Agencies may determine by rule as provided in Section 13(b)(2) of the BHC Act.”³³ Under this power, the Agencies propose to include commodity pools, as well as the foreign

³¹ *Id.* at 68,897.

³² *Id.*

³³ *Id.*

equivalent of any entity identified as a “covered fund.”³⁴ According to the Agencies, these entities are included because they are generally managed and structured similar to a covered fund except that they are generally not subject to the Federal securities laws due to the instruments in which they invest or because they are not organized in the U.S. or one or more States.³⁵

Many asset managers operate funds outside of the U.S. that are registered and regulated in those foreign jurisdictions. The Proposed Rule is over-inclusive because it covers all such funds without actually identifying the characteristics that make such funds problematic for U.S. banks, or demonstrating that these funds lack adequate regulation by foreign jurisdictions. Such foreign funds are different from traditional hedge funds or private equity funds, and the Association suggests that the Agencies exclude from the Proposed Rules restrictions on funds that do not present the risks that the Volcker Rule is intended to address. We propose a number of suggested changes to this end:

- As the scope of the Volcker Rule restrictions is intended to be limited to funds with U.S. resident investors, the Agencies should consider simply excluding all foreign funds that are not actively marketed to U.S. investors. This would have the additional benefit of clarifying that inadvertent sales of interests in foreign funds to persons who are or who become U.S. residents would not subject the fund to the restrictions of the Volcker Rule.
- The Agencies should further consider excluding non-U.S. regulated funds, such as UCITS funds and other European regulated funds, that are subject to a degree of supervisory regulation in foreign jurisdictions that make it unlikely that they would pose significant risk to a banking entity or the United States.
- In the alternative, we urge the Agencies to focus on specific characteristics rather than attempting to cover all foreign funds. The Agencies should consider adopting an exemption from the definition of covered funds using a system based on the characteristics suggested in Form PF. Form PF requires reporting of certain information by advisers to hedge funds and private equity groups. It focuses on these funds because they possess the type of risky trading strategies that typically concern regulators, which are also at the heart of the Volcker Rule prohibitions. Form PF also excludes funds that pose minimal systemic risk, while the Volcker Rule has no such exemptions. For example, State-registered advisers and “Exempt Reporting Advisers” are exempt from having to file Form PF with the SEC because they pose minimal systemic risk. Therefore, we suggest the Agencies consider covering only foreign funds, which exhibit several of the following attributes: (1) engaging in significant leverage; (2) having significant investment in derivatives and illiquid instruments; (3) not providing frequent liquidity rights of investors; and (4) incentivizing managers to engage in risky investments or techniques through performance fees.

This scope should also be applied to covered funds and private equity funds in both the U.S. and foreign markets to create a logical and consistent approach for the Agencies to address the core aspects of the Volcker Rule, which is to reduce systemic risk without violating important market

³⁴ *Id.*

³⁵ *Id.*

functions. By establishing such a system, the Agencies would be excluding foreign funds regulated similarly to mutual funds and bank common and collective funds. This would exclude funds offered to retail investors that are substantively regulated, such as UCITS funds, where less risk exists.

The Proposed Rule's extension to "commodity pools" may now include 40 Act Funds. Narrowing the commodity pool scope to exclude those funds that invested in commodities for hedging purposes and otherwise cover their exposure consistent with SEC Release IC-10666 and related no-action letters is a prudent approach. Under SEC Release IC-10666 the SEC typically allows investments in commodities and derivatives among other financial instruments so long as assets are segregated from core exposure and are in amounts sufficient to cover all of the hypothetical borrowing.³⁶

Finally, the "covered funds" definition should be amended to exclude wholly owned subsidiaries, rather than exempting only those engaged in liquidity management. Since the definition of covered funds is so expansive it will cover wholly owned subsidiaries engaged in non-risky, permissible activity which was to be protected and ultimately hinder the ordinary course of business for holding companies.

B. Exemptions

Section __.11 of the Proposed Rule sets out the conditions that must be met in order for a banking entity to own an interest in a covered fund.³⁷ These conditions include: (i) the banking entity must provide *bona fide* trust, fiduciary, investment advisory, or commodity trading advisory services; (ii) the covered fund must be organized and offered only in connection with the provision of *bona fide* trust, fiduciary, investment advisory, or commodity trading advisory services and only to persons that are customers of such services of the banking entity; (iii) the banking entity may not acquire or retain an ownership interest in the covered fund except as permitted under the Proposed Rule; (iv) the banking entity must comply with the restrictions governing relationships with covered funds under the Proposed Rule; (v) the banking entity may not, directly or indirectly, guarantee, assume, or otherwise insure the obligations or performance of the covered fund or of any covered fund in which such covered fund invests; (vi) the covered fund, for corporate, marketing, promotional, or other purposes, (A) may not share the same name or a variation of the same name with the banking entity (or an affiliate or subsidiary thereof), and (B) may not use the word "bank" in its name; (vii) no director or employee of the banking entity may take or retain an ownership interest in the covered fund, except for any director or employee of the banking entity who is directly engaged in providing investment advisory or other services to the covered fund; and (viii) the banking entity must (A) clearly and conspicuously disclose, in writing, to any prospective and actual investor in the covered fund (such as through disclosure in the covered fund's offering documents) the enumerated disclosures contained in the Proposed Rule, and (B) comply with any additional rules of the appropriate Agency or Agencies, designed to ensure that losses in such covered fund are borne solely by investors in the covered fund and not by the banking entity.³⁸ While the Association agrees

³⁸ *Id.*

with some provisions included in these exemptions, including the bona fide services provisions and the provisions on investments by employees and directors providing advisory or other services, we have concerns with the naming prohibition.

1. Bona Fide Services

The Association fully supports the bona fide services provisions included under Section __.11(a) of the Proposed Rule. The Association agrees that entities must have the ability to provide bona fide trust, fiduciary, investment advisory, or commodity trading advisory services to customers and supports the Agency's conclusion that the customer's relationship does not need to be pre-existing. When a bank is engaging in such bona fide services, the goal is to support the customer's needs, not to engage in risky behavior. Further, this exemption avoids a potential conflict of interest for asset managers that are affiliated with banks and may otherwise have difficulty continuing to provide advisory services to their clients without changing their business model.

2. Naming Prohibition

Section __.11(f) of the Proposed Rule provides that the covered fund, for corporate, marketing, promotional, or other purposes, (1) may not share the same name or a variation of the same name with the banking entity (or an affiliate or subsidiary thereof), and (2) may not use the word "bank" in its name.³⁹

We believe the naming prohibition proposal over-reaches, and we urge the Agencies to interpret the congressional mandate as narrowly as possible. We note that at present, the Proposed Rule's language expands beyond the Dodd-Frank Act, which amends the BHC Act to include that a banking entity may not share with the hedge fund or private equity fund, for corporate, marketing, promotional, or other purposes, the same name or a variation of the same name.⁴⁰ The Dodd-Frank Act does not require the Agencies' rulemaking to preclude the use of the name of investment management firms affiliated with banking institutions, and we therefore urge the Agencies to limit the definition of "banking entity" in this context to U.S.-insured depository institutions.

As the Proposed Rule currently stands, the naming prohibition burdens the industry without providing adequate corresponding benefits. Under Section __.11, the banking entity may not, directly or indirectly, guarantee, assume, or otherwise insure the obligations or performance of the covered fund or of any covered fund in which such covered fund invests.⁴¹ This restriction is sufficient for ensuring that the entities are viewed separately in the market. We question the necessity for any naming prohibition when a prohibition on bailing out funds is in place and where there is disclosure that investors bear the risk of loss in any default. The prohibition on bailing out funds protects against the "too big to fail" problems of the financial crisis and the disclosure requirements provide the necessary warning to investors of the risks involved. Further restricting the name of the fund, and in particular restricting the name of the fund beyond the name of the U.S.-insured depository institution, does not provide sufficient additional benefits.

³⁹ *Id.* at 68,902.

⁴⁰ *Id.*

⁴¹ *Id.* at 68,901.

It will be burdensome and expensive for funds currently affiliated with banks or bank-owned asset managers to change the name of the fund. Not only will the process be costly, but potential reputational costs also exist, as many of these funds have developed a solid reputation and good will within the marketplace that is affiliated with the fund's current name. Such actions will also inevitably lead to investor confusion, as many already associate certain fund names in the marketplace with certain characteristics. Ultimately, this restriction will place these funds affiliated with banking entities at a disadvantage and further hurt the financial condition of such funds and their bank-affiliated asset managers.

3. Investments by Employees and Directors Providing Advisory or Other Services

Section __.11(g) of the Proposed Rule implements Section 13(d)(1)(G)(vii) of the BHC.⁴² The provision prohibits any director or employee of the banking entity from acquiring or retaining an ownership interest in the covered fund, except for any director or employee of the banking entity who is directly engaged in providing investment advisory or other services to the covered fund.⁴³ The Association generally supports the Agencies' approach and agrees it is essential that fund managers or advisers and support staff be permitted to have, "skin in the game." Indeed, many institutional investor clients require this as an additional check on the fund manager's or adviser's loyalty and diligence.

The Proposed Rule also recognizes that director or employee investments in a covered fund may provide an opportunity for a banking entity to evade the limitations regarding the amount or value of ownership interests a banking entity may acquire or retain in a covered fund or funds contained in Section 13(d)(4) of the BHC Act and Section 1.12 of the Proposed Rule.⁴⁴ To address this concern, the Proposed Rule would generally attribute an ownership interest in a covered fund acquired or retained by a director or employee to such person's employing banking entity, if the banking entity either extends credit for the purpose of allowing the director or employee to acquire such ownership interest, guarantees the director or employee's purchase, or guarantees the director or employee against loss on the investment.⁴⁵ Once again, the Association agrees that this solution adequately addresses the problem while still permitting such employees the ability to meet client needs.

C. Sections 23A and 23B of the Federal Reserve Act

The Dodd-Frank Act mandates additional restrictions on transactions between affiliates, amending Section 13(f)(1) of the BHC Act to generally prohibit a banking entity that, directly or indirectly, serves as an investment manager, investment adviser, commodity trading adviser, or sponsor to a covered fund from engaging in any transaction with a covered fund if the transaction would be a "covered transaction" as defined in Section 23A of the Federal Reserve (FR) Act, as if the banking

⁴² *Id.* at 68,902.

⁴³ *Id.*

⁴⁴ *Id.*

⁴⁵ *Id.*

entity and any affiliate thereof were a member bank and the covered fund were an affiliate thereof.⁴⁶ Section 23A and Regulation W limit the aggregate amount of “covered transactions” between a bank and any single affiliate to 10 percent of the bank’s capital stock and surplus, and limit the aggregate amount of covered transactions with all affiliates to 20 percent of the bank’s capital stock and surplus.⁴⁷ A “covered transaction” under 23A includes, for example, the extension of credit by a bank to an affiliate and the issuance by a bank of a guarantee on behalf of an affiliate.⁴⁸

Section __.16 of the Proposed Rule, consistent with the Dodd-Frank Act requirements, is more restrictive than Section 23A. Section __.16 generally prohibits a banking entity and any of its affiliates from entering into any such transaction, while Section 23A permits covered transactions with affiliates so long as the transactions meet certain requirements.⁴⁹ Essentially, the Proposed Rule would prohibit all entities in a banking organization, and not merely the “bank,” that act as an investment adviser or sponsor to a covered fund from engaging in certain transactions, including providing loans to or investments in a covered fund. Unfortunately, the Proposed Rule does not recognize certain standard exemptions available under Section 23A and Regulation W, whereby certain activities are recognized to not inhibit the goals of safety and soundness and allow for a functioning market to continue.

Under the additional restrictions provided for in the Proposed Rule, banks and their affiliates would not be able to engage in limited types of covered transactions currently permitted by the exclusions and restrictions under Section 23A when lending to affiliates. Unlike the regulations between banks and their affiliates, where limitations exist but banks are still able to lend, the Proposed Rule would make it so that advisers are no longer permitted to lend money to funds in the same way as is available for banks to lend to operating affiliates. In practice, this provision would allow banks to engage in more extensive activities with affiliated and unaffiliated entities than would be permitted between a bank or its affiliate and an affiliated hedge fund, creating an unequal playing field for affiliated funds and potentially increasing interconnectedness amongst major banks.

⁴⁶ Under Section 23A a member bank and its subsidiaries may engage in a covered transaction with an affiliate only if: (A) in the case of any affiliate, the aggregate amount of covered transactions of the member bank and its subsidiaries will not exceed 10 per centum of the capital stock and surplus of the member bank; and (B) in the case of all affiliates, the aggregate amount of covered transactions of the member bank and its subsidiaries will not exceed 20 per centum of the capital stock and surplus of the member bank. *See* 12 U.S.C. § 371c(a) (2006).

⁴⁷ 12 U.S.C. § 371c(a)(1) (2006); 12 CFR §§ 223.11, 223.12 (2012).

⁴⁸ 12 U.S.C. § 371(b)(7) (2006); 12 CFR § 223.3(h) (2012).

⁴⁹ For reference, under Section 23B of the FR Act a member bank and its subsidiaries may engage in: (A) Any covered transaction with an affiliate; (B) The sale of securities or other assets to an affiliate, including assets subject to an agreement to repurchase; (C) The payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise; (D) Any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or to any other person; or (E) Any transaction or series of transactions with a third party if an affiliate has a financial interest in the third party, or if an affiliate is a participant in such transaction or series of transactions, only in certain circumstances. A member bank and its subsidiary may engage in these activities only: (1) on terms and under circumstances, including credit standards, that are substantially the same, or at least as favorable to such bank or its subsidiary, as those prevailing at the time for comparable transactions with or involving other nonaffiliated companies; or (2) in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would be offered to, or would apply to, nonaffiliated companies. *See* 12 U.S.C. § 371c-1 (2006).

The Association also questions the necessity to restrict activity more tightly between banks and affiliates when the banks are engaged in the traditional functions of custodian banks. Custodian banks that also manage covered funds must be able to continue to provide custodian services, such as providing intraday credit in connection with routine security and currency deliveries of payment transactions. While the Association acknowledges that lines of credit may create potentially risky situations, provisional liquidity services in connection with payment transactions merely facilitate the trade and ensure that delays caused by unavoidable situations, such as currency issues, do not derail the trade. Custodian banks need to continue this activity to provide at least some straight-thru processing for their managed funds. If custodian banks are unable to provide custodian services, more risk would be introduced into the settlement process, because funds would have to find third party custodians or others to offer intraday credit to provide the necessary liquidity. Turning to third parties for such intraday credit may create operational challenges and disrupt the settlement process without providing any benefit to the market or end investor. It would also increase risk to the banking organization and markets without providing corresponding benefit, as the bank may still perform the same role and engage in the same types of activities with unaffiliated funds.

D. Limitations on Fund Investments

Section __.12 of the Proposed Rule describes one of the limited circumstances under which a banking entity may acquire or retain, as an investment, an ownership interest in a covered fund that the banking entity or its affiliates offer.⁵⁰ Banking entities may take an ownership interest in a covered fund if the banking entity's investment is limited to no more than three percent of the total outstanding ownership interests of such fund (after the expiration of any seeding period provided under the rule).⁵¹ The Proposed Rule also requires that the banking entity's investment in a covered fund may not result in more than three percent of the losses of the covered fund being allocable to the banking entity's investment.⁵² Further, the banking entity may not invest more than three percent of its Tier 1 capital in covered funds in the aggregate.⁵³

The Association believes this restriction will be harmful to bank-owned asset managers, by both eliminating the ability of these managers to launch non-40 Act Funds and also limiting the ability of bank-owned managers to launch innovative strategies that address the needs of institutional clients, such as large pension funds, if the fund may not meet all of the requirements of 40 Act Funds. This would harm investors generally, as well as bank-owned asset managers.

Typically, bank asset managers will market affiliated funds that have at least a three-year performance record in order to attract institutional investors. In order to create such a longstanding record, the manager will typically seed a strategy for the initial three years with capital. Few asset managers or investors are willing to invest in a strategy that does not have a three-year performance record. Because of the broad application of the Volcker Rule to bank-affiliated managers, the three percent restriction will severely curtail a bank-affiliated manager from investing its own money to

⁵⁰ Prohibitions and Restrictions on Proprietary Trading and Certain Interests In, and Relationships With, Hedge Funds and Private Equity Funds, 76 Fed. Reg. at 68,903.

⁵¹ *Id.*

⁵² *Id.*

⁵³ *Id.*

create the three-year performance record, and effectively eliminate an advisor's ability to launch new strategies that are not 40 Act Funds.

We acknowledge that the Agencies must adhere to the statutorily mandated restriction which includes a one-year time limit. However, we encourage the Agencies to implement a system whereby an additional two-year extension is available upon request for incubation of new and innovative products, as this would be "consistent with safety and soundness and in the public interest," particularly where separate capital of the manager is used and the fund does not utilize capital from the insured depository institution.⁵⁴ We worry that the factors required under the final rule on the Conformance Period for Entities Engaged in Prohibited Proprietary Trading or Private Equity Fund or Hedge Fund Activities create too high of a hurdle to meet, or at a minimum, create uncertainty as to whether a bank will qualify for the extension.⁵⁵ Rather than requiring an entity to essentially extinguish all other options, we argue an additional two years should be presumed to be granted in situations where a bank can establish that its actions are part of a legitimate product development program.

III. AGENCY COORDINATION

The Association also is concerned that the Agencies have not adequately clarified which Agency will be responsible for ensuring compliance with various components of the Proposed Rule. We worry that without the proper coordination, entities will be subjected to overlapping and potentially inconsistent regulation. Beyond wanting to ensure that our member firms fully understand how to comply with the final regulations, when issued, it would also be helpful to ensure that there is no disconnect between the Agencies that could translate into the same regulations being interpreted differently by different Agencies. Many of our members are regulated by more than one of the Agencies. For example, both the SEC and bank regulatory authorities regulate our members that are affiliated with banks. The Association requests that the final rulemaking articulate that the Agencies will coordinate oversight efforts and clarify which agency will supervise in various situations.

IV. DELAY OF IMPLEMENTATION

The Association agrees with House Financial Services Oversight and Investigations Subcommittee Chairman Randy Neugebauer (R-TX) and the other House Financial Services Committee Members who urged the Agencies in a December 20, 2011, letter to consider comments to the Proposed Rule and then issue an interim final rule reflecting comments from affected stakeholders.⁵⁶ We commend the Agencies for including numerous questions and making public statements on their willingness to consider industry concerns with the Proposed Rule, and would appreciate the opportunity to further comment before the rulemaking is final. Further, although we understand that it may take

⁵⁴ See Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111–203, 124 Stat. 1376 (2010).

⁵⁵ Conformance Period for Entities Engaged in Prohibited Proprietary Trading or Private Equity Fund or Hedge Fund Activities, 76 Fed. Reg. 8,265 (Feb. 14, 2011).

⁵⁶ Letter from Rep. Randy Neugebauer to Chairman Ben Bernanke, Fed. Reserve Bd., Chairman Gary Gensler, Commodity Futures Trading Comm'n, Acting Comptroller of the Currency John Walsh, Office of the Comptroller of the Currency, Chairman Mary Schapiro, Sec. and Exch. Comm'n, and Acting Chairman Martin Gruenberg, Fed. Deposit Insurance Corp. (Dec. 20, 2011), available at <http://randy.house.gov/uploads/Neugebauer%20House%20Volcker%20Rule%20Ltr1.pdf>.

congressional action to delay implementation of the final rule (as Section 619 becomes effective on July 21, 2012, even without a final rule), we note that there have been other situations where statutory deadlines were missed because of the complexity or challenges faced by the Agencies in implementing rules within the time frame established by Congress.⁵⁷ Therefore, we urge the Agencies to delay the time for compliance with this deadline in view of the many unsettled questions and issues they raise and the need for the industry to have final guidance before making significant investment of time and resources to modify their operations. It is important to ensure that regulators have the time necessary to re-propose the rulemaking, and market participants need time to adjust activities to comply with the final rulemaking. Although we recognize that covered banking entities have a two-year conformance period to bring existing activities and investments into compliance with Section 619 of the Dodd-Frank Act, we argue this does not adequately replace providing the Agencies with enough time to consider market concerns without worrying about an arbitrary deadline.

V. CONCLUSION

The Association recognizes the challenges the Agencies face in implementing these new requirements and appreciates the Agencies considering our concerns. We thank the Agencies for the opportunity to comment on the Proposed Rule. Please feel free to contact me with any questions you may have on our comments at jgidman@loomissayles.com or (617) 748-1748.

On behalf of the Association of Institutional INVESTORS,

John R. Gidman

⁵⁷ As of February 1, 2012, a total of 225 Dodd-Frank rulemaking requirement deadlines have passed. More than half of these deadlines have been missed. For example, last July the SEC and CFTC announced that they would miss deadlines on derivatives rulemakings and suspend some new derivatives rules so that the Commission had time to consider what if any further action was required. Press Release, Securities and Exchange Commission, SEC Proposes Exemptions from Registration Requirements for Security-Based Swaps Issued by Certain Clearing Agencies (June 10, 2011), *available at* <http://www.sec.gov/news/press/2011/2011-124.htm>.
