RE: Regulatory Capital Rules: (1) Regulatory Capital, Implementation of Basel III, Minimum Regulatory Capital Ratios, Capital Adequacy, Transition Provisions, and Prompt Correction Act: RIN 3064-AD95; and (2) Standardized Approach for Risk-Weighted Assets, Market Discipline and Disclosure Requirements: RIN 3064-AD96

Dear Mr. Feldman:

Park Bank is an \$800 Million asset community bank in Milwaukee, Wisconsin. As a community banker with Park Bank, I am gravely concerned over the broad approach taken by the Federal Deposit Insurance Corporation (FDIC), together with Board of Governors of the Federal Reserve System (FRB) and Office of the Comptroller of the Currency (OCC), (collectively, the Agencies) to impose a "one-size-fits-all" regulatory capital scheme despite the fact that the industry believed the Basel III proposals were intended for the very large, complex international institutions.

Respectfully, I believe this approach excessively tightens regulatory capital requirements on community banks which is unwarranted, beyond Congressional intent in many respects, and will likely cause a disruption in available credit in our marketplace.

I wish to remind the Agencies that, in addition to the proposed Basel III rules, there are currently at least ten major mortgage related rulemakings in various stages of development (HOEPA, MLO compensation, TILA/RESPA integration, two appraisal rules, ability-to-repay, risk retention, escrow requirements, and mortgage servicing rules under both TILA and RESPA). This, in turn, builds upon at least seven major final rulemakings in the previous 36 months (RESPA reform, HPML requirements, two MDIA implementation rules, appraisal reforms, appraisal guidelines, and MLO compensation).

I am very much concerned about the cumulative burden these rules will have on my institution. It is vitally important that the proposed regulatory capital rules be analyzed together in the context of other rulemakings and regulatory reforms—and be prospective in approach. The Agencies must not create capital requirements that are based upon occurrences in the past, under a different regulatory environment, and without consideration of other rulemakings and reforms.

For these reasons and for the concerns outlined below, the Agencies must withdraw the proposed regulatory capital rules, conduct additional study and analysis, and only propose capital rules which take into consideration the impact other regulatory proposals and reforms will have on risk. The Agencies must recognize that there are many differences between community banks and large, complex international institutions—and must, therefore, not force a community bank into the same capital calculation measurements as a sophisticated international institution.

If the Agencies do not withdraw the proposals to further study the drastic impact they will have on community banks and on the U.S. financial industry as a whole, I urge the Agencies to take into consideration the specific concerns and recommended changes noted below.

Accumulated Other Comprehensive Income (AOCI)

As proposed, all unrealized gains and losses on available for sale securities (AFS) must "flow through" to common equity tier 1 capital. Therefore, if there is a change in the value of an AFS security (which can occur daily in some circumstances), that change must immediately be accounted for in regulatory capital. I wish to remind the Agencies that unrealized gains and losses occur in AFS portfolios primarily as a result of movements in interest rates—and not as a result of credit risk.

If the rules are finalized as proposed, with the inclusion of unrealized losses of AFS securities in common equity tier 1 capital, rising interest rates would put downward pressure on banking organizations' capital levels. This will potentially cause my bank to reduce our growth or shrink our securities portfolios considerably in order to maintain capital ratios at the desired or required levels.

Additionally, as a community bank, we have been an investor in our local government entities. However, as proposed, the rules would discourage my bank from holding municipal securities, including holding U.S. Treasuries, because of the interest rate impact on such long-duration assets. This, in turn, could lead to a lower return on assets for my bank and less funding for the housing market and national and local governments, collectively.

We have already begun replacing maturing, longer duration, investments with short term, variable rate, and low-yield investments in order to avoid any valuation decline related to interest rate fluctuations due to this pending rule. Although this may seem extremely prudent from a risk perspective it has also resulted in a reduction in our yield on investable assets and overall net income. This regulation will also force banks to focus more on reacting to short term changes in interest rate fluctuations verses prudent longer term sustainability.

For these reasons, I greatly oppose this proposed treatment. The Agencies must remove this treatment from the proposals.

Capital Risk-Weights for Residential Mortgages and Related Matters, High Volatility Commercial Real Estate (HVCRE), and Home-Equity Lines of Credit (HELOCs)

The Agencies' proposals place new significantly higher capital risk weights in several categories of real property-secured loans despite having neither empirical evidence to substantiate the need for such heightened capital levels, nor a mandate under law. The proposals raise several significant concerns, including the following.

Residential Mortgage Exposures Risk Weights

The proposals assign risk weights to residential mortgage exposures based on whether the loan is a "traditional" mortgage (Category 1) or a "riskier" mortgage (Category 2) and the loan-to-value (LTV) ratio of the mortgage. The current risk weight for a real estate mortgage is generally 50%; however, depending upon the Category and LTV ratio of a particular residential mortgage, the capital risk could rise to 200%. These higher risk weights appear to be arbitrarily set as there is no empirical data presented by the Agencies to support this extraordinary increase in risk weights for certain types of mortgages.

Respectfully, I challenge the Agencies' assumption that a residential mortgage has a higher degree of risk based exclusively upon the loan having a balloon payment, an adjustable rate, or an interest-only payment, to warrant the substantial increases in capital risk weights that are proposed. In fact, our portfolio of interest-only loans has experienced minimum losses. The Agencies' proposed capital treatment far outweighs the reality of risk that we have experienced for these types of loans.

In addition, the substantial increase in risk weights will discourage my bank from making theses types of loans even though we have experienced minimal losses. The majority of our loans in this category relate to second mortgage, HELOC, loans for qualified borrowers that are located in our market. These individuals use these loans for many different purposes, including additional equity investments into their businesses, purchasing a new home, funding college education for their children etc. Our bank will be more reticent to consider this important form of financing or do so with increased costs to our customers because of the risk weighting changes.

The Agencies must not finalize the proposed rules with such severe and unwarranted risk weighted treatment of residential mortgage exposures.

High Volatility Commercial Real Estate (HVCRE)

As proposed, high volatility commercial real estate (HVCRE) is defined as acquisition, development and construction (ADC) commercial real estate loans except: (1) One- to four-family residential ADC loans; or (2) commercial real estate ADC loans in which: (a) applicable regulatory LTV requirements are met; (b) the borrower has contributed cash to the project of at least 15% of the real estate's "appraised as completed" value prior to the advancement of funds by the bank; and (c) the borrower-contributed capital is contractually required to remain in the project until the credit facility is converted to permanent financing, sold or paid in full. Under the proposed standardized approach, each HVCRE loan in a bank's portfolio will be assigned a 150 percent risk weight.

While I recognize the fact that certain types of commercial real estate (CRE) lending may pose a higher risk given today's economic environment, the Agencies' proposals impose a higher risk weight without considering any of the following mitigating factors in connection with a particular transaction: LTV ratio; dollar amount of the loan; other commercial real estate assets of the borrower; any guaranty; or other general risk-mitigating factors of a particular CRE loan request. Just as these risk-mitigating factors are analyzed when we decide whether to approve or deny a particular CRE loan request, the Agencies must also take these mitigating factors into consideration when assigning a capital risk weight to a particular CRE.

If mitigating factors are not taken into consideration, the proposals would cause Park Bank and other banks in our community to further limit any new real estate financing that is essential to support local communities. Park Bank, like all banks, has been extremely diligent in analyzing any new CRE loan request and works to mitigate risks. A loan's initial LTV is not the only factor that leads to potential loss and this factor can be mitigated in other ways.

Park Bank also utilizes the U. S. Small Business Administration's 504 (a) loan program that requires only a 10% equity contribution by a borrower for financing. The program finances up to 40% of the transaction while our bank finances up to 50%. The LTV on the first mortgage is below the proposed regulatory threshold but the cash equity contribution is below 15%. The proposed regulation would change the use of this important financing alternative for business owners wanting to purchase and own a building housing their business.

Therefore, the Agencies must revise their proposed HVCRE risk weight to take into consideration risk-mitigating factors.

Home-equity Lines of Credit (HELOCs)

The proposal classifies all junior liens, such as home-equity lines of credit (HELOCs), as Category 2 exposures with risk weights ranging from 100 to 200%. In addition, a bank that holds two or more mortgages on the same property would be required to treat *all* the mortgages on the property—even the first lien mortgage—as Category 2 exposures. Thus, if a bank that made the first lien also makes the junior lien, the junior lien may "taint" the first lien thereby causing the first lien to be placed in Category 2, and resulting in a higher risk weight for the first lien. By contrast, if one bank makes the first lien and a different bank makes the junior lien, then the junior lien does not change the risk weight of the first lien. There is one exception to this general treatment; however, that exception is very narrow and thus, most junior lien mortgages will likely be deemed Category 2 mortgages.

Again, this is another area within the proposals for which the Agencies have provided no data to support their assertion that all HELOCs are risky and warrant such severe treatment. In reality, HELOCs are carefully underwritten—based not only on the value of the home, but upon the borrower's creditworthiness and with some of the strongest LTV ratios.

The Agencies must remove the treatment that all HELOCs are an automatic Category 2 classification.

No Grandfather Treatment for Existing Mortgage Loans

Finally, the proposed rules do not include any type of grandfather provision. Thus, *all* mortgage loans currently on the bank's books will be subject to the new capital requirements. This will require bank staff to examine old mortgage underwriting files to determine the appropriate category and LTV ratio for each mortgage. This is a daunting task and comes at a time when the industry is also implementing numerous other *substantial* regulatory revisions and reforms previously mentioned. We simply do not have resources necessary to gather all of the information required to properly determine the revised risk weights for existing mortgage loans.

This change will also result in Park Bank having to evaluate increased pricing on existing customers at a time when they need support the most.

The Agencies must grandfather all existing mortgage exposures by assigning them the current general capital risk-based weights.

Conclusion

For the concerns outlined above, the Agencies must withdraw the proposed regulatory capital rules, conduct additional study and analysis, and only propose capital rules which take into consideration the impact other regulatory proposals and reforms have on risk.

The Agencies must recognize that there are many differences between community banks and large, complex international institutions.

I appreciate the opportunity to comment on the Agencies' proposals.

Sincerely,

Park Bank

David P. Werner

President
