Re: Basel III Capital Proposals

Ladies and Gentlemen:

Thank you for the opportunity to provide comment on the Basel III proposals that were recently issued for public comment by the Federal Reserve Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation. BankSouth is a federally chartered thrift headquartered in Greensboro, Georgia with offices there and in Watkinsville, Georgia.

Community banks should be allowed to continue using the current Basel I framework for computing their capital requirements. Basel III was designed to apply to the largest, internationally active, banks and not community banks. Community banks did not engage in the highly leveraged activities that severely depleted capital levels of the largest banks and created panic in the financial markets. Community banks operate on a relationship-based business model that is specifically designed to serve customers in their respective communities on a long-term basis. This model contributes to the success of community banks all over the United States through practical, common sense approaches to managing risk. The largest banks operate purely on transaction volume and pay little attention to the customer relationship. This difference in banking models demonstrates the need to place tougher capital standards exclusively on the largest banks to better manage the ability to absorb losses.

Imposing distribution prohibitions on community banks with a Subchapter S corporate structure conflicts with the requirement that shareholders pay income taxes on earned income. Those banks with a Subchapter S capital structure would need to be exempt from the capital conservation buffers to ensure that their shareholders do not violate the provisions of the Internal Revenue Code. We recommend that the capital conservation buffers be suspended during those periods where the bank generates taxable income for the shareholder.

The proposed risk weight framework under Basel III is too complicated and will be an onerous regulatory burden that will penalize community banks and jeopardize the housing recovery. Increasing the risk weights for residential balloon loans, interest-only loans, and second liens will penalize community banks who offer these loan products to their customers and deprive customers of many financing options for residential property. Additionally, higher risk weights for balloon loans will further penalize

community banks for mitigating interest rate risk in their asset-liability management. Community banks will be forced to originate only 15 or 30 year mortgages with durations that will make their balance sheets more sensitive to changes in long-term interest rates. Many community banks will either exit the residential loan market entirely or only originate those loans that can be sold to a GSE. Second liens will either become more expensive for borrowers or disappear altogether as banks will choose not to allocate additional capital to these balance sheet exposures. Community banks should be allowed to stay with the current Basel I risk weight framework for residential loans. Furthermore, community banks will be forced to make significant software upgrades and incur other operational costs to track mortgage loan-to-value ratios in order to determine the proper risk weight categories for mortgages.

Implementation of the capital conservation buffers for community banks will be difficult to achieve under the proposal and therefore should not be implemented. Many community banks will need to build additional capital balances to meet the minimum capital requirements with the buffers in place. Community banks do not have ready access to capital that the larger banks have through the capital markets. The only way for community banks to increase capital is through the accumulation of retained earnings over time. Due to the current ultra low interest rate environment, community bank profitability has diminished further hampering their ability to grow capital. If the regulators are unwilling to exempt community banks from the capital conservation buffers, additional time should be allotted (at least five years beyond 2019) in order for those banks that need the additional capital to retain and accumulate earnings accordingly.

In conclusion, we are opposed to the proposals as stated for community banks. Our belief is that it would not only do harm to our ability to lend money for home buying by qualified individuals and families, but would also pose a regulatory burden on us and other similar institutions. This would also severely slow any economic recovery our area so sorely needs.

Sincerely,

David S. Cowles
Executive Vice President & Chief Operating Officer
